It is therefore very likely that the next few decades will see the appearance of the supersonic air-liner. This project is of great scientific interest. To view it we must take a summary glance at what it is that makes an aeroplane work.

The Energy Account.

Consider first the aeroplane's energy account. The energy released by burning the fuel is directed to one end, the production of the aeroplane's kinetic energy of forward motion. Most of it is lost on the way, in imparting kinetic energy, heat, and sound waves to the air through which it passes, and in energy of heat and vibration in the aeroplane itself.

Any aero engine works by giving a backward kick to the air, in essentially the same way as a swimmer kicks his way through the water. In the piston engine it is the propeller which it turns that provides the kick. The turbo-jet engine does its own kicking by swallowing some air and ejecting it as a hot high-speed jet after compression and combustion; its power can be partly used, as in the turbo-prop engine, to turn a propeller as well. And for the highest operating speeds there is the simplest air swallower, the ram-jet engine, which achieves its compression without moving parts. In all cases the engine designer's problem is the same, to minimise the energy left behind in air which has received a given amount of backward momentum. He is doing very well except in one respect, noise. The most pernicious component of an aeroplane's noise arises at the edge of a jet, and increases formidably with its speed, as any visitor to the festival of decibels at the Farnborough Air show will realise. The step to supersonic speed may produce air-liners which will not be tolerated by those who have to live near air-ports.

While it is the function of the engine to push air backwards, it is the fate of every part of the aeroplane to drag air forwards. The wing, for example, cannot slip through the air without disturbing it. On the contrary, it continually drags air forward with it as it proceeds, and thus sheaths itself in a thin covering of moving air, the boundary layer, which leaves a sheet of air in disturbed motion, the wake, behind the wing. At the outer edges of the boundary layer the air is at rest; at its inner edge, on the surface of the wing, it is moving with the wing's speed. The boundary layer problem, the most famous in aerodynamics, is to make the air flow as smooth and regular as possible between these limits. The most orderly regime—that which produces the thinnest boundary layer and contains the least energy—is the laminar flow in which the air moves in planes parallel to the wing's motion, like a pack of cards sliding over each other. It is, however, unstable and nearly always breaks down towards the rear of the wing into turbulent flow, for which the boundary-layer thickness and the energy left behind in the wake are magnified many times. The maintenance of laminar flow under practical flight conditions without undue cost would constitute a major advance in aeronautics and might bring down air fares with a bump. One way of doing it is to perforate the wing surface, suck away the boundary-layer air, and discharge it to the rear. This is not as simple as it sounds, and the method, though potentially of great promise, has still to be established.

Besides this, the aeroplane has another energy leak which is unique to itself. Its wing must pass through the air in such a way that the pressures on it supply a lift to support the vehicle's weight. It can do this only by making the air through which it passes rotate about axes in the direction of motion; the energy of this vortex motion passes into the wake. A simple rule governs this loss. The vortex energy left behind a wing of given area supplying a given lift decreases as its span increases. Thus if the wing is a rectangle, its aspect ratio, the ratio of its span to its chord, is what matters: the larger this is, the better. But to increase the aspect ratio means that the wing must weigh more if it is to be strong and stiff enough. The designer's job is thorny with compromise: this is a simple example.

Supersonic Conditions.

Air, like any other gas, is compressible, and the sketch so far made of the pattern of disturbance left behind the aircraft applies only when its speed is so small that the air it energises can be treated as incompressible. As the speed approaches that of sound, density changes in the disturbed air begin to count, and at supersonic speeds there is a radical change for the worse in the energy pattern. This is now no longer confined to the wake, for the shock waves themselves, springing from the supersonic body, are thin sheets of energy, which interact with the boundary layer, increasing its energy and that of the wake. In this regime, temperature changes in the disturbed air become very important. The boundary layer is now a depository of heat created by the viscous forces which are necessary to maintain the high-velocity gradients in its interior. It becomes so hot at quite moderate supersonic speeds that heat conduction through the aeroplane's surface would if left to itself convert its interior into a flying oven. Hence

arise the insulation and cooling problems of kinetic heating, and ultimately the use of materials more heat-resistant than the light alloys now used.

Aircraft designers have for long been fighting a delaying action as they approach the speed of sound. There are two effective tricks for dodging the onset of strong shock waves. The first is to decrease the thickness of the profile of the wing (its section by a plane perpendicular to the span). The second is to sweep the wing back, and there is now little doubt that increase of the angle of sweep to upwards of 60° will be a key point in the design of supersonic air-liners.

However complex it may be in its detail, the energy account amounts to this, that the better the aeroplane is, the less commotion it leaves behind in the air. The passenger on board ship, when he watches its bow wave and its wake, has a beautiful visual demonstration of the naval architect's problem. It is a pity that neither the air traveller nor the designer of his craft can see what is going on around and behind it.

The Lift/Drag Ratio.

The energy account can be brought up against the hard facts of practical design by noticing that every packet of energy that the aeroplane leaves behind in the air turns up as drag, *i.e.*, resistance to its motion. This gives the designer his measure of aerodynamic efficiency, the lift/drag ratio. In cruising flight the lift balances the aeroplane's weight and the drag is balanced by the engine thrust, and so the reciprocal of the lift/drag ratio is the fraction of the weight that must be supplied as thrust. It has taken much effort to maintain the lift/drag ratio at the level of about 17 as the speed of sound is approached, for example, in the 600-m.p.h. jets. In passing through the speed of sound, a steep rise in drag is sooner or later inevitable. As the supersonic speed rises the lift/drag ratio falls steeply to a much lower level, and the current aerodynamic problem is to discover aeroplane shapes that will reduce the steepness of this downward slope. Supersonic travel at a reasonable cost depends a good deal on the success of this search.

The Designer's Job.

This brings us to the designer, who nowadays has to be a jack of all trades and the master of the integrated airframe–engine configuration. In essence his job is to provide the lightest wrap in which to move a certain number of passengers through a certain distance at a certain speed. The wrap consists mainly of structure, engines, fuel, and equipment for the flight. In working it out he is deeply involved in balancing one good feature against another. The shape he chooses must be aerodynamically good. But if he goes for a very high lift/drag ratio what he saves in fuel and engine weight may be more than lost in the increased weight of the structure. He has to use the most efficient engines for the chosen speed, and he has to work them into his chosen shape so that his provision of thrust does not bring a lot of drag in its train. He would use fuels of higher energy and materials of higher strength per unit of their weight if he could find them, but there is no sign of a breakthrough in these directions. The compromises in his problem grow more critical as the range of his vehicle is increased. As an example of what he achieves, the weight of the wrap to carry about 100 passengers from London to New York at 600 m.p.h. turns out to be about 100 tons, at least ten times as much as its payload.

The Aeroplane Family.

It is instructive to look at the monoplane shapes that line the road to high speed, and to note that they constitute a well-defined family with significant variations. The family make-up consists of a cigar-shaped body, to which wings and tail are attached. At the lowest speed the glider, with its dragon-fly proportions, is a beautiful but fragile thing, as aerodynamically perfect as may be. It takes on power and speed for its transport job. Its wings are reduced in span; they grow engines. In a long range of speed they are still straight; at about 400 m.p.h. they begin to fold back and become thinner, but at 600 m.p.h. the sweep hardly exceeds 30°. The only break with family tradition in the high subsonic speed range occurs in the delta, a successful compromise which, after folding its wings back to at least 45°, fills in the space between them and the body to form a triangle. What will happen next, at the jump to supersonic speed, is still uncertain, but it seems probable that the main visible feature of the development will be an increase in sweep back. If the jump is to 800 m.p.h. the wings should still be distinguishable from the body. At 1200 m.p.h. the shape might be so slender that body and wings merge in one surface: the dragonfly we started with would have folded up its wings.

The Ground Organisation.

No survey of high-speed development in air transport would be complete without some consideration of its effect on the ground organisation of the system. Every aeroplane has a minimum speed below which it is unsafe to leave the ground or return to it, and it is this that determines the runway length. There is a natural tendency for this minimum speed to grow with cruising speed. It has reached about 150 m.p.h. with the 600-m.p.h. jets, and needs about 1½ miles of runway. This has two consequences, one related to the disposition of air-ports, the other to the safety of the passenger.

The necessity for large open spaces has led, broadly speaking, to the centralisation of the ground organisation, which works mainly from a small number of large air-ports, each situated many miles from a city centre. This produces the air traveller's well-worn grumble, that he always has to go places before he takes off and after he lands. It means that a fast air-liner running into impossible weather conditions at its terminal has a very limited choice of alternative landing grounds, and must carry a large excess fuel load against the risk of diversion. It also means that air transport's much-vaunted flexibility in speed may recoil intolerably on the traffic controller of a busy terminal if a large increase in cruising speed coincides with an increase in traffic.

The argument as to safety is equally serious. The air traveller who is watching his approach to land in low cloud is right to be rather apprehensive. Landing is much the most difficult job the pilot has to do. Its difficulty in poor daylight conditions or at night increases rapidly with the growth of approach speed because he is left with less time to make the critical final adjustments to his approach to the runway. At 150 m.p.h. he may be reaching the limit of his competence when everything that can be done at present has been done to aid him from the ground. It is arguable that approach speeds should be limited to a maximum substantially less than 150 m.p.h. In this context the supersonic air-liner is bound to come out badly. Whatever its configuration may turn out to be, it must necessarily be an inefficient instrument for comfortable ground performance. Whether it will scrape by the 150-m.p.h. mark is rather doubtful.

These difficulties could be swept away by the development of a device which is now being studied and might—if its cost could be met—revolutionise the ground organisation of air transport. The beginnings of VTOL (vertical take-off and landing) have been seen in press reports of the Flying Bedstead experiments. The aeroplane carries engine thrust which is greater than its weight and acts vertically. It can rise vertically from the ground, hover by sitting on its jets, and accelerate to the speed at which

its wings can support its weight and take over for normal flight; its landing is roughly the same process in reverse. This development would open several possibilities: abolition of the growth of immense masses of concrete; flight between city centres; and ultimately perhaps a radical transformation of the present air-port pattern. But the VTOL aeroplane must carry at least three times as much power as usual, and increase of power means an increase of noisiness. Its increase in weight would be cut down by compensatory savings in several directions. But its economic account seems at present to be rather heavily against an easy passage to acceptance, except in some special applications. All the same, a partial use of its principle may be forced by the hard facts of high-speed design. It may turn out that a satisfactory runway performance of a supersonic aeroplane can be assured only by using some jet lift to augment its wing lift.

The Supersonic Prospect.

To sum up the prospects of the supersonic air-liner, the problem of carrying 100 passengers non-stop across the Atlantic, without an altogether prohibitive cost, in the speed range 800—1,200 m.p.h., with a journey time between 5 and 3½ hours, is technically feasible. Its solution will probably be forced before very long by the particular pressures of expansion now at work within the highly competitive air-transport industry. Potentially a very hot and very noisy vehicle, it can probably be kept cool and quiet enough without resort to new materials and untried engineering methods. It may be difficult to land; it may stretch to their limit the longest of existing runways; and if it is simply added to the current traffic of a terminal air-port it will tax the ingenuity of the traffic controller. Its greatest unknown, and one that can hardly even be guessed at the moment, is how much more its passengers will have to pay for their privileges.

Air versus Surface Travel.

It remains to consider in volume and kind the people that are being and will be attracted to air travel. The basic facts are simple and eloquent enough. About 25% of the U.S. population make one flight per year, and as those who travel by air usually do so frequently, the percentage of individuals is probably much less. This figure is much higher than anywhere else in the world except Australia; in Europe it does not much exceed 2%. These numbers must, of course, be related to their rate of growth. It is true that air traffic the world over has increased some five-fold in the last ten years, but this figure is significant only when linked to the traffic level at the beginning of the period. It is consistent with the much more revealing fact that B.E.A. carries about ¼ million more passengers each year, that is about ½% of the United Kingdom population, though their passengers are drawn from a much wider area. These facts should be set against some rough estimates of the comparative cost of air and surface travel. The British figures are fairly typical. B.E.A.'s air fare hovers round 6*d*. per mile; British Transport's average fare, whether by rail or by road, is rather more than 1½*d*. per mile.

The trend is clear enough. Air transport has made only a very slight impression on the mass of the people even in the areas of highest prosperity, and even if an indefinite extrapolation of its growth curve is permissible it will be a long time before it issues a serious challenge to surface transport. In the main—and after allowing for the introduction of the tourist air ticket—it is a luxury service for top people—the wealthy, the government official, the business executive. For them it has spanned the world; it is they if any who will pay for the supersonic time-saver. In one respect only is air transport showing a popular impact, and that is in a large extension of the holiday radius for the middle-income bracket.

So much for what is and what probably will be. Is there an alternative route for air transport to take: one that would make the major part of a community air-minded? When the railways appeared a century ago they succeeded in a few decades in getting most of the population of Britain on the move. Could air transport repeat that performance on its own speed and distance scale? The signals are heavily against it in regions with highly developed surface systems. In North America the chosen instrument of bulk travel is the motor car and the motor coach; in Europe the railways are losing traffic to the roads. In every region where the standard of living is high enough for the habit of mobility to make a strong growth it is the motor industry in its various forms that is penetrating to the mass of the people. The man with £50 or £100 of income to spend on getting about invests in a cheap car and goes by train or coach when more convenient. The air, he says, is not for him. This is true. But if he lives where roads are few and railways non-existent the air might still be for him if it would work hard to get at him. In fact, it is already at work—in the Australian out-back, in Arctic Canada, and in some other large territories with undeveloped production potential—but in a makeshift fashion, unsupported by big business, using out-of-date equipment, accomplishing heroically much with its means, but far from the beginnings of a well-organised transport system in a virgin field. We may conclude by imagining what the aerobus, the unit of such a system, might look like, on the assumption that to pay its way it would have to carry more passengers than the air-liner of today, whose complement seldom exceeds 100.

The Aerobus.

Consider, then, the air analogue of a five-coach train, with a full load of 300 passengers, travelling at 50 m.p.h. with hourly stops. The aerobus would do the same duty, but at 300 m.p.h.; its stage length would be 300 miles. The shape of this vehicle would probably be an unusual one. The cigar-shaped body has held its place in the aeroplane's anatomy mainly because the human race is nearly 6 ft. tall. As the number of passengers increases the wing necessary to support them grows so large that ultimately the depth of its central part exceeds the passenger's head room. The passenger cabin can then be housed in the wing itself, and the body, which is an inefficient member because it contributes nothing to the lift, can disappear. Our dragonfly, which may fold up its wings to become supersonic, now sheds its body and becomes a swept-back flying wing. The 300 passengers would occupy a triangular room in the centre of the aerobus. It would weigh about the same as a trans-Atlantic jet carrying 100 passengers, with about double the wing area and about 50% more wing span; its landing speed would be much lower.

The aerobus, as its name is meant to suggest, would be ruggedly constructed, with no great aerodynamic refinement, to serve the workaday needs of people who would mostly want to travel a few hundred miles in an hour or two. Its design problems are trivial compared with those of high-speed development. Its first cost would be only a fraction of that of a high-speed vehicle of the same size. Its special features combine to reduce its running costs, which could be further lowered by sacrificing most of the amenities that gild current air travel, since most of its passengers would be on board only an hour or two. Its use is a speculative theme capable of many variations. The changes can be rung on its speed, which might be as low as 200 m.p.h.; its stage length, which might be anything between 100 and 1,000 miles; and its payload, which might fall to 200 passengers. It would operate most efficiently over regions whose centres of population are widely separated, and looking round the undeveloped parts of the world these fall into two broad divisions:—

1. A large territory whose undeveloped resources are being energetically pioneered by a population which is now very sparse and scattered but will, as the development proceeds, expand and concentrate in widely

spaced industrial, mining or farming centres served only by primitive surface transport. Arctic Canada and Siberia are obvious examples of this process.

2. A large country with a dense population, whose way of life has been maintained with the slowest and most primitive of communications, and whose rulers propose to industrialise it in a very large way without the surface transport adequate to the process. Here and now, with a big question mark, stands China; and here too, in the not too distant future, parts of Africa may be included.

In such places and in such circumstances air transport might lead surface transport, instead of following it, and so begin to serve the mass of the people. Whether or not it will do so must be left an open, intriguing question.

EEL MIGRATIONS.

American and European Fresh-water Eels.

All the fresh-water eels of Europe and North Africa belong to one species, *Anguilla anguilla*, and have from 110 to 119 vertebræ in their backbones. The eels of North America differ from ours in having only 103–111 vertebræ and, solely on this distinction, have been recognised as a distinct species, *A. rostrata*. Before the formation of the vertebræ the young larval stages can be distinguished by similar differences in the numbers of muscle-segments or *myomeres* in their bodies.

The Classical Interpretation of the Eel-migration.

The problem of the birthplace of the common European eel was not solved until the early years of this century. Prolonged Danish investigations, led by Johannes Schmidt, produced collections of transparent leaf-like *leptocephalus* larvæ from all over the Mediterranean and North Atlantic. Schmidt then showed that the smallest leptocephali of the European eel come from an area south-east of Bermuda (roughly between lat. 23–29° N., long. 50–65° W.) which must obviously contain the area where the eggs are spawned. From 1922 onwards it was very reasonably assumed that the European silver eels, which leave our rivers on their seaward migration every autumn, must be the parents of the larvæ which originate in the Sargasso Sea and which, as elvers, invade our rivers each spring at the end of a three-year Atlantic crossing. How the adults found their way and survived journeys of from 3,500 to 6,000 miles back to the Sargasso was not known; none had ever been taken in the open ocean, but, since the offspring were found there, it seemed indisputable that the parents must return there somehow.

At the same time Schmidt produced evidence that the American eels must spawn in an area a little south-west of the European, and that their larvæ complete their shorter journey and metamorphose into elvers in only one year.

Tucker's Hypothesis.

In 1959 (*Nature*, **183**, 495, 1405; **184**, 1281), Dr. D. W. Tucker of the British Museum (Natural History) produced a drastically new interpretation of the available evidence. He does not in any way contradict Schmidt's observations, except to suggest that the American eel-larvæ originate south of the European rather than south-west, and that the two supposed breeding-grounds are actually contiguous. On the new hypothesis, however, the European eel-migration is a suicide migration; the silver eels do not return to breed. Both the European-type and American-type larvæ are the offspring of identical American parents, physically modified and distributed according to the water-masses in which they are spawned. Both the American and European eels are thus one species (for which the name *Anguilla anguilla* has priority), and Europe is annually re-colonised by a new invasion of surplus American eel-larvæ in what may be regarded as the oldest form of Marshall Aid!

Two Difficulties of Migration.

Tucker emphasises the difficulties facing the European silver eels on their hypothetical migration: the long distance; the widely-varying current, salinity, and temperature conditions in European waters which would have to be navigated by one single instinctive behaviour-pattern; the advanced and degenerative changes which prevent feeding and endanger the maintenance of the essential difference between the body-fluids and the ocean outside. He contrasts these with the relative immaturity of the migrating American eel and its simpler and much shorter journey.

Two Kinds of Eel from One Kind of Parent?

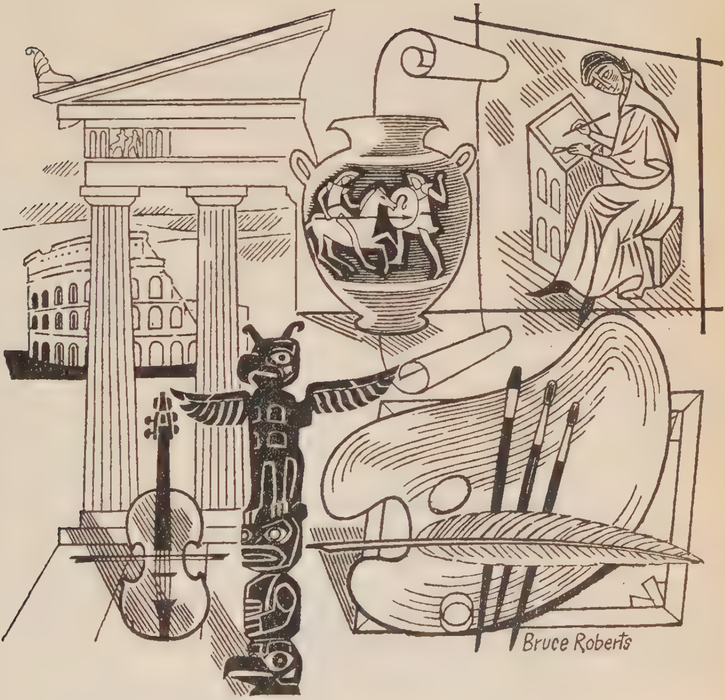
Tucker goes on to show how both American and European-type larvæ may be derived from American parents. Eels spawn at a considerable depth in the sea, over 400 metres down. The eggs and larvæ rise to the surface under their own buoyancy. Now, in the southern part of the Sargasso Sea, there is a steep rise in temperature, from 18° C. at a depth of 300 metres to more than 25° C. at the surface. We know, from experiments on trout and other fishes, that a sudden temperature change at a critical stage in the development of the embryo puts an end to the segmentation of the body. It is very likely that our eel-eggs would react in the same way, so giving rise to larvæ with the low number of myomeres/vertebræ (103–111) characteristic of the parent American eels. In the northern part of the Sargasso, however, the temperature rise from the depths to the surface is very much less; from a similar 18° C. at 300 metres to barely 20° C. at the surface. Eel-eggs rising in this region would not be affected by temperature; the embryos would continue their segmentation unhindered until the hereditary limit had been reached, and so we would have larvæ with the 110–119 myomeres/vertebræ characteristic of the "European" type.

The combined *Anguilla* spawning-area underlies the southern arc of the great clockwise surface-current system formed by the North Equatorial and Antilles Currents and the Gulf Stream, a system which runs deeper as well as faster at its periphery. Our American-type eel-larvæ find themselves travelling on the periphery of this system; they are carried up along the east coast of North America, while, at the same time, high temperatures along their route speed up their development and induce an early metamorphosis so that they are ready to move inshore into fresh water before the end of the first year. Those which drift elsewhere eventually metamorphose and die without making landfall. Our European-type eel-larvæ, travelling much more slowly in much cooler water on the inside of the current-system, drift instead north-east towards Europe; they grow more slowly, though to a greater size, and have their metamorphosis conveniently delayed so that they do not change into elvers until within easy reach of European continental waters.

A Theory to be Proven.

No really damaging criticism of the new hypothesis has so far been published, though it has attracted a great deal of international scientific interest. At the same time it must be emphasised that it is merely a hypothesis, needing further evidence for its eventual proof or disproof, and claiming only parity with Schmidt's interpretation of the evidence presently available. We must wait now for new contributions from laboratories and research ships towards the solution of this newly re-opened problem.

The World of Art



This outline is arranged for the most part on a historical basis. Much has been included about the social scene since the arts of a people must inevitably be related to the surge of life going on around them.

TABLE OF CONTENTS

The World of Art

INTRODUCTION

This section is mainly concerned with the fine arts of literature, music, sculpture, painting, and architecture, and mainly too with their manifestations in the Western world. The approach is historical, because although it may be true that great works of art are timeless and convey something fresh to each generation, it is important to understand what the artist meant to convey to his own generation, and this is impossible without some knowledge of the social background. Little can be said about the life of any individual artist, but if the whole paragraph in which his name appears is read (or better still, the whole sub-section), it is hoped that the general character of his work and the forces influencing it will be made clearer. This section assumes no special knowledge whatever on the part of the reader. It is a background to art as the science section is a background to science, and just as the latter cannot show the reader what a cell nucleus looks like but only tell of its structure, so this section can only tell of works of art. These lie in the world around us, and *knowing* about them is not at all the same thing as *experiencing* them—which, after all is one of the reasons why they were created. But it would be sheer affectation to pretend that experience is always enough in itself to bring about understanding of a work; that we must naturally enjoy the music of Monteverdi when we are used to that of more recent composers; or appreciate a statue by Henry Moore if we have been reared in the classical Greek tradition. One needs to have some idea of the artist's social background and what he is trying to do for the full enjoyment of his work, and that is one of the reasons why facts of the sort presented here are as important for appreciation as for information pure and simple.

What is Art?

The dictionary points out that the word "art" may be used in three different connections: (*a*) of a skill—being able to do something supremely well; (*b*) of a craft—*i.e.*, skilled handiwork ordinarily intended for some practical purpose; (*c*) of the fine arts, with which we are mainly concerned here. The function of the fine arts is primarily aesthetic, and they are deliberately created to this end by the artist; they are something upon which he has worked by taking the materials provided by nature—stone, sounds, wood, pigments—and imposing form and design upon them according to a conception which was originally in his own mind.

Art began in prehistoric times as an activity which was unnecessary, as the first civilised gesture of savage man when he added some useless decoration to his clay pot which in no way improved its true function. Nothing could be done with it except look at it. Music arose from the rhythms of the dance, storytelling from the desire to recount the great events of the past, and the theatre from the religious rituals which re-enacted significant happenings in the lives of the gods man had projected from his own mind upon the blank screen of the universe. Some of the arts have had utilitarian origins, but *as art* their sole function is to give pleasure to the bystander, and when their connections with magic or religion were severed they continued in a life of their own. They represent the overflow of surplus energy, the gratuitous, the unnecessary, the non-utilitarian aspects of life.

Beauty in the sense of perfection of form or perfection in creating the object aimed at is necessary to all art, but beauty in the sense of attractive and pleasurable by direct appeal to the eye or ear is not. Rembrandt, especially in his later years, often chose as his subjects the old, the sad, the sick, or the bewildered, and Bosch depicted "horrid phantoms of hell"; purposeful ugliness or even obscenity in an artist's subject-matter is not inconsistent with aesthetically satisfying work. It would be unnecessary to say this were it not that a general impression arose mainly among the lay public during the Victorian period that art and prettiness were the same, that, in addition, literal truth to nature in its more cheerful aspects was a valid criterion of good art.

It is the function of the fine arts to convey an emotional experience felt by the artist; the experience may be ecstatic or mystical, tender or cruel, lovely or ugly, bitter or sweet, comical or serious, calm or tempestuous, pure or obscene, and the ability of the artist to pass on these emotions is one measure of his competence. Hence the poems of St. John of the Cross, the landscapes of Constable, Goya's *Horrors of War*, the *Mona Lisa* of da Vinci, a shaft of light painted by Rembrandt, Voltaire's *Candide* or Wordsworth's *Prelude*, *Pickwick Papers* or the writings of Pascal, Debussy's *L'Après-midi* or Beethoven's Seventh Symphony, the works of Rabelais and Shakespeare's *As You Like It* are all, in varying degrees, works of art. They are not equally important works of art; for a smile is not as exciting as a belly-laugh, the trials of the Vicar of Wakefield as moving as those of Lear. They are to be judged in terms of what they attempted and succeeded in doing, and whether we feel it was worth doing at all.

Form in Art.

Herbert Read has defined beauty as "a unity or harmony of formal relations among our sense-perceptions." Nothing, that is to say, can be described as a work of art unless it has some shape or form. Even when formlessness or discord enters into its composition, this must be merely an element in a meaningful whole. We must feel that the end of *Hamlet* is an event towards which the whole play has been leading us, and we should feel it was all "wrong" if Hamlet made it up with his uncle, married Ophelia, and lived happily ever after—although this could very well happen in real life. Similarly, the end of a symphony or indeed any piece of music must be the end which, although only dimly perceived—or even not perceived at all—during the performance, is somehow the inevitable result of what went before. In a painting the same unity of formal relations is achieved by the skilful use of rhythm of line, composition (*i.e.*, the way in which the various shapes are arranged), the relations between light and shade, the colours, and the space surrounding the forms. Deliberate intention, the ability to communicate, and form are the indispensable qualities of all art. "Nature has no Outline but Imagination has," said the poet Blake.

Realism.

The idea that all art must be about something concrete and should be judged by the degree to which it approximates to nature is described as realism or naturalism. In this sense, the idea is largely a product of ill-informed Victorian thinking, because no great art of any period has ever been wholly realistic. The classical Greek statues so often held up as models of realism are, of course, extremely idealistic, since they do not in fact correspond to the general appearance of ordinary human beings, and even portraits by great artists are a great deal more than literal transcriptions of the visible appearance of the sitter.

Prior to the invention of the camera the portrait painter had an important social function to perform, since, at a time when few people travelled more than a few miles from their place of birth, it was impossible for subjects to know the face of their rulers or aristocratic suitors to choose their often distant brides-to-be. Velasquez, for example, in 17th-century Spain was commissioned to paint not only one portrait of Philip IV, but an immense number of identical copies, which were

distributed throughout the royal palaces or given as gifts to nobles or other royal families. But these and all other portraits are much more than realistic renderings of what the artist saw before his eyes, and they are only likely to be judged more than competent in so far as they reveal how a sensitive mind *interpreted* what it saw. Otherwise we must adopt the absurd position that the best pictures are coloured photographs.

It was the invention of the daguerreotype, the earliest form of photograph, in 1839 which made it clear that if imitation were to be regarded as the basic function of the artist he had better give up business. For there is nothing he could do in this respect that the camera could not do better. The alternative was to move away from the more literal forms of realism to arrive by way of impressionism at the other end of the scale—abstract or non-representational art. The artist had never been fully committed to the direct representation of nature, but now he could feel even more free to interpret it or communicate his own feelings about it in terms of the medium in which he was working.

That this is by no means a new trend but only one which has returned from the past is well illustrated by the religious paintings of Stanley Spencer (d. 1959) in Britain (G62(1)). These aroused a good deal of antagonism, both by reason of the distortion, sometimes amounting to caricature, and by the presentation of biblical figures in modern dress. Yet this artist's work was purely in the old Gothic tradition, which used distortion to produce an emotional effect; the presentation of biblical figures in what was supposed to be biblical costume is quite a recent innovation. Far from being a modernist, Spencer was a traditionalist. The works of Henry Moore and other modern sculptors are incomprehensible only if we are looking for a detailed copy of form and feature in stone, but when they are seen as a translation of *meaning* from one material to another it becomes possible to judge them on their own merits. There is no reason why art should be "about" anything or why the artist, writer, or composer, should not be free to experiment with patterns, sounds, or words provided only that he is able to communicate to others something of the emotion felt in the process of creation.

Art and the Philosophers.

The branch of philosophy dealing with the nature of art and in particular with the nature of beauty is known as "aesthetics," and not unnaturally its fundamental question is whether beauty is a real quality such as redness or squareness, a quality which is independent of the observer and by which all works of art can be judged, or whether it is merely a matter of taste and essentially personal. If the first theory be correct the person who states that Shakespeare wrote better plays than Noel Coward or that Beethoven was a greater composer than Irving Berlin is stating an objective fact which must be absolutely true at any place or time. If the second theory be correct he is simply expressing an opinion, and his statement really means that he happens to prefer Shakespeare and Beethoven, while others may as legitimately prefer Coward and Berlin.

The objective view is that first expounded by Plato in the *Phaedrus* which regards beauty as one of "the forms" in the ideal world of which our everyday world is merely a shadow and its objects only real insofar as they approximate to the ideal "forms." The belief that beauty is an objective quality and not merely a matter of taste is restated in Clive Bell's theory of "significant form" which appeared in his book *Art* (1914) and which has had an immense influence upon art criticism ever since. Bell begins by pointing out that aesthetic experience begins with the personal awareness of a particular emotion which, no matter how much it differs in quality or intensity, is always of the same type. All genuine works of art possess the ability to stimulate this emotion, otherwise there would be no sense in grouping them together as art; for this is the sole property they have in common. The emotion felt by the artist and transmitted by his work to others may have been initially aroused by a real object, but the object is seen, not as a means to something outside itself, but as an end in itself—as a combination of significant forms. From this point of view there is only one criterion of art—its ability to act as a window to reality, and no matter how the panes change and are clear or dim from one age to another or one place to the next, the view it gives is eternally the same. This is essentially what Spinoza meant when he said that the contemplation of beauty has the power to make the soul lose all sense of time and place, so that in a particular object it sees an infinite meaning, or Schopenhauer when he said that aesthetic interest is detachment, or Wordsworth in his definition of poetry as "emotion recollected in tranquility."

The extreme subjectivist view in aesthetics is expressed in Tolstoy's book *What is Art?*, published in 1897. Here Tolstoy suggests that art is the communication of emotion felt by the artist to others and that when this emotion arises from a fresh and vivid attitude towards the world and is successfully communicated the result is great art. Art which claims to be beautiful but in fact arouses only pleasure is not art at all, yet this has been a characteristic of the so-called art of the bourgeois and ruling classes throughout history. This theory implies: (*a*) that art must be able to communicate the *same* emotion felt by the artist to the greatest possible number of people; (*b*) that it has a moral function; hence, he pointed out, Shakespeare's *King Lear* is a wicked and vicious play; (*c*) that therefore, since Russian peasant songs have communicated emotion to more people than have Shakespeare's plays, they are greater art. Beauty is not something inherent in a poem, a piece of music, or a painting, it is a quality produced in those who experience them, and its presence is to be estimated by counting heads. *See* G59(1).

However, there are many people who would hold this view in a modified form. For example, they may take the view that the value of a work of art cannot be estimated by noting its effect upon *everybody* but only upon those who are specially trained in the appreciation of art. Beauty lies, not in the object itself, but in a relationship between the object and the mind perceiving it. An important exponent of this point of view is Dr. I. A. Richards, whose *Principles of Literary Criticism* and *Foundations of Aesthetics* (in collaboration with C. K. Ogden) have been influential in supporting the theory, based on modern psychology, that what we call beauty is emotional satisfaction; a beautiful object is one that by its contemplation brings about a state of emotional equilibrium in our otherwise conflicting impulses. Ordinarily our environment arouses in us emotional responses, many of which are inharmonious or conflicting and need to be systematised, ideally by an adjustment which "will preserve free play to every impulse with entire avoidance of frustration." "In any equilibrium of this kind," says Dr. Richards, "however momentary, we are experiencing beauty." The fact that for this moment we *are* the whole complex of our integrated impulses accounts, in his view, for the feeling of detachment so characteristic of the aesthetic experience. We see the fruit without experiencing hunger, the nude without desire, the landscape without worrying about the weather or the state of the crops. This view is not necessarily in contradiction with Braque's statement that "art disturbs, science reassures," nor with that of the sculptor Henry Moore to the effect that all great art stimulates feelings of conflict in the observer. Clearly art must not be too perfect or facile to be stimulating; it must first stimulate and even arouse conflicting emotions which demand some participation by the observer before they can be resolved.

Summary.

We know that the judgments of critics and artists are often unreliable, and that tastes change. One can almost hear the sigh of resignation of Frederick when he announced to his court that "old Bach" had come to visit his brilliant son

C. P. E. Bach, yet it is only "old Bach" who matters today. We know that the 18th century found little to please in Shakespeare and the French until fairly recently nothing at all; that the Greek statues which had been admired by the Romans fell into disrepute with the advent of Christianity and virtually remained hidden from sight for a thousand years until the Renaissance, when Michelangelo's teacher Signorelli painted the first convincing nude; that the Renaissance artists loathed Gothic while, Ruskin, Braque, and Picasso express their distaste for the Renaissance. The fact is that art presents us not only with form but with emotions, ideas, and ways of thought, which sometimes become a threat to established ways. The formal and respectable French Salon of 1846 was shocked by Delacroix's vivid colours and Oriental figures as the Renaissance artists who loved the naked human form disliked the emotional distortion of Gothic. They were not wrong—they simply did not share the same world-view, and this is why some knowledge of the social background of the artist is essential. We must know what sort of people the artist lived among in order to understand what he wished to convey.

ART THROUGH THE AGES

PREHISTORIC ART.

The term "prehistoric" refers to that period in human history before any written records were kept. In the absence of such records classification has to be in terms of the human remains and manufactured objects such as tools, weapons, or works of art found by archæologists. Hence we talk of the *paleolithic* or old stone age (which occupied in Western Europe more than 90% of her history) and the *neolithic* or new stone age, which began about 6000 B.C. and gave way in turn to the bronze and iron ages. These dates apply only to Western Europe, the Near East, and surrounding areas; in other parts of the world some peoples are still living in the stone age.

Paleolithic Art.

The earliest works of man were tools and weapons made out of pieces of flint or carved from wood and bone. To begin with these implements were chipped or flaked and it is only as the neolithic period dawns that they were ground and polished. The first important art objects seem to have been created by a hunting and fishing people known as the Aurignacians who, about 25,000 years ago, inhabited southern France, northern Spain, and some parts of Italy. These tribes made necklaces for their women and painted and sculptured both in rock and bone. There are human heads carved in relief on rock surfaces; more commonly, figures in the round, such as the lovely heads of young girls cut out of bone, discovered in France; representations of animals in the form of figurines or ornamenting the handles of tools; and, most typical of all, the statues of pregnant women thought to represent a fertility goddess. Among the best-known of these are the so-called Venuses of Willendorf in Austria, and Menton and Brassempouy in France.

The Aurignacians were cave-dwellers, and when, in 1879, a certain Marquis de Santuola went out for a walk with his little daughter hunting for flints and fossils in the cave of Altamira which is situated in the Cantabrian mountains in the north of Spain he little suspected that he would return with a remarkable new contribution to the knowledge of prehistoric man. His little girl, becoming bored, had wandered off unnoticed by her father until he heard her calling "Toros, toros!" (Bulls, bulls!) She was found standing some distance within the cave and pointing to a part of the roof covered with animal paintings, some life size and all remarkably realistic: they were of bulls, mammoths, bears, stags, and reindeer. The Marquis was interested in antiquities and hastened to tell his colleagues, but he was not believed and was even accused of producing the paintings himself. He has since been vindicated by the discovery of about forty caves similarly decorated in northern Spain and the south of France with two in Italy. One of the most recently discovered is that at Lascaux in the Dordogne found by accident during the second world war.

These cave paintings are great art of a type quite unlike anything produced in Europe before or since. First, they are extraordinarily realistic and reveal a remarkable feeling for movement. As Roger Fry points out, they reveal their subjects in poses which have only recently been demonstrated by the slow-motion camera. Secondly, they depict the subject as a whole without undue emphasis on any one feature; it is almost as if the artist possessed what psychologists call "eidetic imagery," the ability found in young children and some adults to look at an object and then, turning away to a blank sheet or screen, to visualise it so clearly that it appears to be projected on the blank area. The Aurignacian artist seems to have projected his image in this way and, as it were, drawn an outline around it. Thirdly, although each figure is perfect in itself, the drawings collectively show no sign of design or form; they have no pattern, and quite commonly one drawing is superimposed upon another. Possibly the reason for this was that the primary function of the paintings was ritual rather than artistic. The Aurignacian artist's only implement was a piece of pointed stone and his paints yellow, red, and brown earths mixed with animal fat and kept in hollow bones. Black was obtained from charcoal. With these materials he nevertheless created paintings which are among the great works of art of all time.

Neolithic and Bronze Age Art.

Towards the end of the paleolithic age the pattern of life gradually began to change, for the transition from old to new stone age did not come suddenly. Hunting tribes began to settle down, to domesticate animals, to raise crops and build homes. The crafts of spinning and weaving came into existence as people learned to twist the hairs of animals or the fibres of plants into threads strong enough to weave into cloth which took the place of the furs of earlier days. These changes, gradual as they were, became typical of neolithic man and those who followed him. Art towards the end of the old stone age was moving away from the realism of former times; it became more stylised, or, if one may so describe it, idealistic. From about 3000 B.C., hardly any realistic art is found in Europe except among the nomads in the far north and there seems to be a concentration on elaborate patterns built up from circles, spirals, and zig-zag motifs. The fertility goddess is still depicted, but in a symbolic rather than a realistic form; for neolithic man had lost the ability of the Aurignacians to create as in a snapshot the impression given by the object. Since the craft of pottery was discovered in neolithic time, many designs are on pots or other vessels and statues in the round are less common, although figures were still carved in relief.

Some time about 5000 B.C. weapons and tools of copper began to replace those of stone in parts of south-west Asia and north-east Africa and copper was later to be replaced by bronze (an alloy of copper and tin) which is harder than copper alone. But in Europe the people continued to use ground stones; the bronze age did not arrive there until nearly 2000 years later—*i.e.*, about 3000 B.C. It was not until 1500 B.C. that statuettes of bronze were made in Sardinia, although in Egypt and elsewhere artists had been working in bronze ware before 3000 B.C. The Sardinian bronzes are lifelike representations of men and women, the men often dressed in fighting array and armed with shields, swords, or bows.

In neolithic times European man first became interested in building better shelters. These—or at least the more permanent ones which have left

some trace—took four forms: (1) in Mesopotamia bricks of dried mud were used from which quite large constructions were built; (2) in places where stone was available huts were made from unhewn blocks and often took the form of an old-fashioned bee-hive, being roughly domed (one of these still survives in the island of Lewis in the Hebrides); (3) stone was sometimes used to line underground dwellings, as in the remarkable underground village uncovered some years ago by the late Professor Gordon Childe at Skara Brae in the Orkney Islands; (4) lastly, there were the well-known lake-dwellings built on wooden piles by the shores of lakes—the best-known are in Switzerland and at Glastonbury and Meare in England. However, undoubtedly the most striking buildings of neolithic times came towards its close in Europe, during the so-called megalithic (huge stone) period. Great stone monuments, of which Stonehenge and Avebury are perhaps the most familiar, were built in north-west Europe, in north Africa, and round the Black Sea. Some, like the above, were circles of huge stones with transverse crosspieces, the function of which was almost certainly religious. Other relics known as dolmens or trilithons were simply two stones with a crosspiece; these were originally covered by an earth mound, since they are tombs and the function of the stones was to form a chamber to keep the soil from the place where the body lay. Menhirs are single standing-stones, some of them seventy feet high; their function is unknown, although they may have been erected to commemorate a victory or some other important event. Among the most complex formations are the groups of stones arranged in parallel rows as at Carnac in Brittany. Such constructions, although they can hardly be described as architecture, demonstrate the importance attached to religion by early peoples.

In order to maintain a sense of proportion, it is worth noting that, at the time when Stonehenge was built—1860–1560 B.C.—the pyramids of Egypt were old, even the most recent being a thousand years older than Stonehenge; the first code of laws in written form had been promulgated by Hammurabi; Babylon had been sacked by the Hittites; and the *Rig-Veda*, a great work of literature, was being produced in India. Western Europe was beyond the fringe of the then civilised world.

The Early Iron Age.

Since, strictly speaking, we ourselves are still in the iron age, iron in the form of steel being one of our basic materials, we are now dealing only with the early period when the metal was first discovered and its use was spreading slowly throughout the known world. Bronze had always been a costly material because copper and tin, of which it is composed, are comparatively rare metals in Europe and the Middle East, being found only in small and widely-scattered deposits. For this reason, bronze age culture was not greatly in advance of neolithic and the metal was mainly used for making weapons or delicate tools to produce luxury articles for the wealthy. The discovery of iron, possibly before 2700 B.C. in west-Asiatic regions, changed all this; for iron is cheap, plentiful, and, above all, once the art of smelting has been acquired, it can be made hard enough for use in agriculture and building. By 1000 B.C., iron hoes, sickles, knives, and ploughshares were in use in Palestine, and by about 700 B.C. the forests which had once covered the face of Europe were being cut down with iron axes to make way for fields. In this way began one of the great revolutionary periods in human history.

Whilst the early iron age farmers were clearing the forests of central Europe, Saul and David had been dead several centuries, Rome had been built, Chinese culture was flourishing in the valleys of the Yellow River and the Yangtze, the Indus valley civilisation had flourished and disappeared, Egypt and Assyria were masters in the Middle East, Homer had written the *Iliad* and *Odyssey*, and Carthage had been founded. But from northern Europe right across Asia to China the land was inhabited by tribes of wandering hunters and herdsmen; these tribes were loosely described by the Greeks as Scythians: Herodotus tells how they bred horses, drank mare's milk, fought on horseback, and lived in wagons. Later in history some of them settled down to an agricultural life in areas further south and raised great quantities of grain which they sold to Athens and other Greek cities.

Nomadic tribes had existed in northern Europe and Asia for centuries and such art as they possessed was, not unnaturally, based on animal motifs. But about 700 B.C. one of these groups, the Scythians of the Russian steppes, produced something much more sophisticated when they began to decorate their equipment—harnesses, quivers for arrows, and shields—with delightful and highly conventionalised patterns. By this time another tribe known as the Cimmerians had been absorbed by the Scythians proper, as the Scythians were later to be absorbed by the Sarmatians. It was, in fact, the Cimmerians who carried culture from the Tigris–Euphrates region and were presumably the source of the Scythian renaissance; to the Greeks, however, all were "Scythians" and their newly-found arts persisted right into the third century A.D. Here, then, was a group of peoples who had contacts in their journeyings with western Europe, with Asia across the steppes as far as China, and with Greece and Mesopotamia in the south.

THE SPREAD OF CULTURE.

We are apt to think of European, African, Asiatic, and Middle Eastern civilisations as developing separately, and to some extent this is true. A people is "civilised" in the literal sense of the word when it takes to building and dwelling in cities (Latin *civis*, a city), and the earliest civilisations arose in the great river-valleys of the Yellow River, Yangtze, Indus, Tigris–Euphrates, and Nile. For the most part they developed independently of each other, but at a very early stage cultural contacts were established, contacts which are only now being worked out. Many people know of the journeys of Marco Polo in the 13th century when he visited China, of the invasion of the north-west part of India by Alexander the Great, and the later contacts of British and Portuguese with West Africa, but research is revealing much earlier spread of cultural influences.

Here we shall make use of an example in which the Scythians were the active agents although others will be mentioned later. The example is one described by the anthropologist A. L. Kroeber—the spread of what is known as the "flying gallop."

The Flying Gallop.

Throughout history horses have been one of the favourite subjects of the artist, and so long as the horse was represented as standing still no great problem arose. When it was the artist's intention to depict the animal in motion, on the other hand, a problem *did* arise since the artist's eye was not quick enough to observe, to "*freeze*" as it were, one or other of the stages carried through during cantering or galloping. In fact, this was not done until 1879 when the American Muybridge invented the slow-motion camera. Thus up till the end of the 19th century nearly all gallop postures in art are visual lies; although they are made to suggest movement, they do not in reality correspond to any of the stages in the motions of a galloping horse as revealed by the camera. This means that the devices used by the artist are conventions and therefore that they are capable of being traced from one culture to another.

In general, only two ways of depicting movement have been used throughout the centuries: the first was rearing or prancing in which the horse is shown standing on its hind legs with the front legs raised and pawing the air. Horses do, of course, adopt this posture—but not when running. The rearing pose was universally used

by the people of Mesopotamia, Egypt, Greece, Rome, and Byzantium; it continued to be used during the Middle Ages, the Renaissance, and right up to modern times in Europe. Some artists from the Renaissance onwards—for example, Velasquez, Rubens, Leonardo, and Raphael—although continuing to use this posture, tried to make the effect less monotonous by foreshortening, that is, by depicting the animal at an angle to the viewer.

The second method of depicting animals in motion was the flying gallop, and anyone who has seen old racing prints belonging to a period prior to the last quarter of the 19th century will know what is meant. The horse is shown stretched right out with its back and neck almost parallel with the ground which its legs do not touch, the front ones being stretched forward, the hind ones stretched backwards, both nearly horizontal. Obviously, any horse unfortunate enough to get itself into this posture would fall flat on reaching the ground; no such posture exists in reality, but the artist was using it to suggest the speed of flight, as indeed it does much more effectively than the first style. The flying gallop has a fascinating history. It first appears in the art of Crete and the Mycenæan period in Greece (*i.e.*, the period prior to the arrival of those we now know as Greeks, who never made use of it). Next it is discovered amongst the Scythians, who, it will be remembered had contacts with the inhabitants of Mediterranean areas mainly through outposts of traders around the Black Sea. Presumably the Scythians, as a horse-loving people, found the suggestion of rapid movement in the flying gallop more to their taste than the other more static style, and they were in a position to spread the concept widely. They carried it to Hungary, to the Goths, who carried it in turn to the Baltic in the west and the Crimea in the east, and to Siberia, where tribes were making use of it centuries after the Scythians had disappeared. Still later, we find that by the second century A.D. it had spread to the Han dynasty in China which traded with the nomadic tribes of what is now Soviet Uzbekistan to obtain their heavy cavalry horses; by the third century A.D. the flying gallop had spread south to Persia under the Sassanian rulers.

China has maintained this style in her art to the present day, and from China it spread to Japan. But it had further yet to travel, for in 1794 it appears for the first time in England in an engraved print of a race-horse by Stubbs. In France it is seen shortly afterwards in a painting of the Derby by Géricault, but in Germany it does not appear until 1840. Once the style was adopted it crowded out the prancing posture which was retained only in equestrian statues for the purely technical reason that contact with the base of the statue is necessary for support.

How did the "flying gallop" reach western Europe? One can only guess, but it is evident that it was first adopted by people who were interested in fast horses. Racing had long been popular in England and had spread to France towards the end of the 18th century, and a style which suggests speed was likely to appeal in these countries. It is not impossible that the style was invented by Stubbs independently of its long history. But it is much more probable that the influence came through British acquaintance with Chinese ceramics which had been popular for a century and a half before Stubbs both through import into the country and from the experiences of British traders in China. The example of the "flying gallop" shows how cultural contacts were occurring even from very early times throughout most of the world.

PRIMITIVE ART.

The word "primitive" has a number of different meanings. There is the art of the prehistoric communities we have just be discussing, and, on the other hand, the art of modern primitive communities still in existence or at least in existence within historical times. Children's art is often described as primitive, and, finally there is the modern school of primitive painting in which a certain naïvété of presentation is either contrived by a highly sophisticated mind or arises without contriving from a naturally simple one. The works of the French painter Henri Rousseau around the beginning of this century come into the first category; the work of Grandma Moses, who started to paint in her seventies in present-day America, come into the second. Our immediate concern here is with the art of modern primitive communities. The main groups coming into this classification are the negro Africans south of the Sahara, the Bushmen of South Africa, the American Indians, the Eskimos, the Australian aborigines, and the inhabitants of Oceania.

There are some facts we should take into account in relation to these so-called "simple" peoples. First, the only sense in which they are simple is in respect of their material organisation or technology; in other respects they may be extremely complex. For example, the social organisation of the Australian aborigines is so complicated that it is even now imperfectly understood by anthropologists. Secondly, in such societies the division between arts and crafts hardly exists because art is inseparable from life as it is lived—from cooking, storing, and fighting, to placating the gods, influencing the course of events by magic, and adorning the body. Hence the vast majority of works of art amongst primitive peoples are ornaments on objects which have a practical function. Thirdly, it is in general true to say that in primitive societies every man is his own artist: he builds his own house, decorates his own pottery, carves such wooden objects as oars, totem poles, masks for ritual dances, and so on. In most cases the designs within certain limits are firmly fixed by tradition and change very slowly unless the community is brought into contact with people of another culture. No doubt in even quite simple societies there are individuals who are recognised as possessing special abilities as artists and carry out the more complex work, but to the world they remain anonymous. This need not cause surprise, however contrary it may be to our own outlook; for with the exception of Greece and Rome in classical times, nearly all art before the Renaissance was anonymous. This applies not only to prehistoric and primitive art but also to the art of the great river-valley civilisations of China, Egypt, Assyria, Babylon, and the Indus, to Byzantine and Mediæval art; we do not always know, for example, who designed or built the great gothic cathedrals. The reason for this seems to have been that, with the exceptions mentioned above, men throughout history did not ordinarily think of themselves as individuals apart from their society—they simply existed as members of a certain family, group, or race.

African Art.

Africa is frequently thought of as inhabited solely by negroes and white colonists. This view, however, is incorrect; for the native population consists of a number of totally distinct groups. In the north there are the Hamitic-speaking peoples from the valley of the Nile who occupied North Africa at a very early date, pushing the original negro inhabitants towards the Sudan. The Hamites are a mixture of Aryans, Semites, and negroid peoples. In the north-west region between the Sahara and the coast are a predominantly Semitic people descended from the Carthaginians who, under their general Hannibal, at one time almost deprived Rome of her control over the Mediterranean. The rest of Africa, with the exception of some areas in the south, is predominantly Negro. North Africa then is divided almost equally between Semitic-speaking and Hamitic-speaking peoples with brown skins and thin, often hooked noses; nearly all of these are now Moslems and the Moslem religion extends for a considerable distance down the West coast. Abyssinia is a Christian country with a Semitic language, whilst the Copts of Egypt, also Christians, speak a Hamitic tongue. The Copts are allegedly the descendents of the ruling classes of ancient Egypt.

The Bushmen and Hottentots of the south are not true Negroes and were probably driven from

the north many centuries ago. Together with the Pygmies, the Bushmen are today the main non-food-producing groups in Africa. They are huntsmen who live on the animals they kill with stone-tipped arrows and on roots dug up by their women.

Primitive Art in North Africa. We shall not be concerned here with Moslem art which will be dealt with separately, but rather with the remains left by earlier inhabitants—mainly rock carvings and paintings. These are found in two regions: Algeria and the central Sahara. In Algeria many rock engravings have been discovered in the Atlas Mountains. Unlike the art of the Aurignacians of Spain and France, these engravings are in the open and are not painted, but the subjects are similar since they are usually animals. The simplest way of dating these works is by noting the species of animal represented, since the climate and hence the type of animal found in the Sahara has varied considerably in the course of time. For example, representations of the buffalo must be earlier than neolithic times when it had become extinct. Engravings of elephants, ostriches, and rhinoceros must also belong to a fairly early, if somewhat more recent, period, since these, too, no longer lived in the area within historical times. On the other hand, when horses and camels are depicted, we know that the work is not prehistoric; for the camel does not naturally belong to Africa, but was introduced from Asia, perhaps by Alexander the Great about the 4th century B.C.

The carvings fall into three main groups: first, the naturalistic representations of animals now extinct; secondly, the group of rather less naturalistic engravings of a more recent period; and thirdly, the late so-called Libyan–Berber designs which an expert has described as "in part rather crude animal outlines, in part designs that are of a purely geometric and schematic character." Here, again, we see the tendency of art to move away from naturalism.

In the central Sahara, in the Tasili Mountains, rock paintings are found which are naturalistic and animated. Their style is quite different from either the early Atlas carvings or the late Libyan–Berber ones of the same area. They are regarded by many authorities as being most closely related to Bushman art and to the art of ancient Egypt. Whence did the influence come? From Egypt or the wandering Bushmen? Nobody knows.

Bushman Art. The Bushmen of today are small and dwarf-like with yellow skins. They now number only a few thousand men and women living in the least-inviting parts of South Africa whence they were driven by the white men and the Hottentots. Bushman art of today is completely negligible, yet at one time these tribes roamed throughout the whole of the continent and their ancient art is found not only in the South which they now inhabit, but also in the region of Lake Tanganyika and possibly in the examples mentioned above, in the central Sahara. Most authorities believe that their culture originated in the region of the East African Lakes, but some have even suggested, on the basis of similarity of art forms, that the prehistoric artists of south-western Europe were related to the Bushmen.

Bushman art is naturalistic and usually depicts men or animals. In some areas these are painted in several colours, in others in monochrome; yet others are not painted but chipped into the rock. The method employed depended on the natural characteristics of the area. Paintings had to be done on smooth and sheltered rock surfaces. In fact, the only ones which have survived are those where the rock is sheltered by an overhanging face. Chippings were often made on flat rocks, and paintings, depending on local facilities, were coloured with various pigments which have since been analysed: red and brown from hæmatite, an iron ore; white from zinc oxide; yellow from iron ochre; black from soot and charcoal; and blue (which does not occur in European stone age art) from iron silicate. A hollowed-out stone was used with a pestle which ground the materials and mixed them with animal fat. The prepared colours were applied with a thin pliable bone somewhat like a spatula. Bushmen pictures show some attempt at perspective—not discovered elsewhere for many centuries—and the artists could represent the profile and even the front and back views (which the more civilised Egyptians found difficult); the colours shaded gradually one into the other. Roger Fry, the great art critic, compared a Bushman picture of two cranes wading through water with Japanese art which shows how delicate such work could be. Pictures and carvings date from different periods, none of them very recent, and in the later periods, as in those of North Africa, symbolic and geometric designs tend to appear.

Negro Art. The Negroes of Africa can be divided into two main groups in terms of their way of life. There are the agricultural peoples of the west living a settled life in their villages, and the nomadic herdsmen of the east and south. The herdsman, living east of the Great Lakes and in South Africa, limit their artistic efforts almost entirely to the decoration of objects for everyday use, such as clay vessels, spoons, shields, basket-work, and wooden headrests or stools. The designs are ordinarily abstract, painted or carved, or (in the case of wooden objects) sometimes burnt as in poker-work. Much use is made of inlays of beads or wire. Many of these forms are most attractive, but it is typical of the cattle-keeping tribes that the human figure is not represented.

The lands of the western agricultural peoples stretch from the Sudan in the north right down the west coast as far as Angola; also included is the great central region of the Congo. These tribes, in addition to the crafts practised amongst the herdsmen, have produced figure carvings and masks which are highly regarded by critics. They have exerted some influence upon modern Western schools notably in France.

Typically the sculpture is in wood—ordinarily a round block cut from a tree-trunk which forms the basis for the cylindrical shape of the human body. Roger Fry pointed out how the West African sculptor really conceived form in three dimensions and has no difficulty in getting away from the two-dimensional plane. Some of these works represent an ordinary human figure, whilst others are of the more fanciful totem-pole type. Ceremonial masks of wood are also produced with great skill, and another frequently-used medium is ivory which is often exquisitely carved. But African sculpture reached its height at Ife in the Congo region and Benin in southern Nigeria. Some works in ivory from these areas reached Europe as long ago as the 15th century, but the famous Benin bronzes only became widely known following the British conquest in 1897. The bronzes vary from busts of the human head to complete statues of animals or men. There are also scenes in relief of animals, men, or mythological subjects. Decorated ivory goblets, bracelets, and so on, have been found which are in European Renaissance style. These seem to have been made to patterns supplied by Portuguese travellers in the 15th and 16th centuries.

The bronzes were made by a technique said to have been introduced to Benin from Ife about 1280, although this art in Benin did not reach its peak until the 16th century. The technique is known as the *cire-perdue* (lost wax) process. A model is made in clay and coated in wax, the whole being then embedded in a lump of soft clay at both ends of which a thin metal tube is inserted to extend as far down as the wax. The outer coating is allowed to harden and molten bronze is poured into the upper tube replacing the wax which flows out of the other. Finally, the outer covering is broken off and the bronze is complete except for finishing off with a chisel or file. The clay inside, already burnt with the heat, is easily dug out.

The present-day art of the Yorubas of Ife reflects the deterioration of a great tradition; for however pleasing one may find their painted wooden figures and masks, they are infinitely inferior to the old ones in quartz, bronze, or terra-cotta.

These have not been made for many years, and the best probably date as far back as the 12th or 13th centuries. Some of the old masterpieces are retained in the palace of the Oni, and large numbers of beautiful terra-cotta heads were kept until recently in a local shrine. These are, unfortunately, by now all stolen or broken. Other art treasures are a ram's head carved from granite and ceremonial stools of great beauty each cut out of a single piece of quartz, but the terra-cotta and bronze heads show Ife art at its best (a number of examples can be seen in the British Museum).

In general, African representations of the human figure are highly fanciful and are designed according to traditions which vary from one tribal group to another. This, however, does not apply to the terra-cotta and bronze heads of Ife and Benin which are extremely realistic. The features are negroid, but the workmanship resembles that of ancient Greece or Egypt rather than Africa, and Sir Flinders Petrie, the famous Egyptologist, has said that if any of these heads had been found at Memphis they would have been readily accepted as larger examples of the local type. The Yorubas of West Africa indeed believe that they originally came from Upper Egypt. The truth of the matter is that cultural spread is more likely to explain the similarities than the theory of the Yorubas. It is nowadays accepted that Egyptian influence spread much further than used to be supposed; Egyptian caravans penetrated far into the Sudan and their ships sailed to the Land of Punt, which is generally identified with the Somali coast.

Primitive Art in Asia, Australia, and Oceania.

Much less in the way of primitive art has been found in Asia than one might expect. First, because the great Eastern civilisations cannot always be traced back to their early origins; secondly, because the later manifestations of these civilisations have so impressed themselves on other peoples that not much art exists which has not simply been copied from them.

Although, for example, China has been inhabited from the earliest days, there exist no traces of art until neolithic times and the only works of real value derive from even later, during the bronze age in the second millenium B.C. Japan shows no evidence of paleolithic man at all, and here again the only objects of value belong to the bronze age, and there is every reason to suppose that they were copied from Chinese sources.

Siberia and Java, where paleolithic man is known to have existed, possess rather poor examples of rock painting and sculpture, but many of these date from not earlier than A.D. 1000. Although there are similar works in India which may be of greater antiquity, they are frequently obscured by the annoying tendency of later artists to superimpose new works upon the old. There are few genuinely primitive tribes in Asia, and their art, such as it is, has been overwhelmed by that of China and India, both of which will be mentioned elsewhere.

The rock-paintings of the Australian aborigines bear a close resemblance to those of the Bushmen in Africa and the prehistoric Aurignacians. All show the same ability to endow representations of living subjects with a sense of movement. Apart from these, which range in date from prehistoric times almost up to the present, the art of the aborigines generally takes the form of drawings or carvings on bark, ritual objects, or baobab seeds. More recently some aborigines have made use of modern Western techniques and become known in Australia as excellent painters.

The islands of the Pacific are collectively known as Oceania, and culturally subdivided into two groups: the Melanesians of New Guinea and the islands west of Fiji; and the Polynesians, amongst whom are included the Maoris and the inhabitants of the islands east of Fiji. By and large, the former were at a more primitive level, being worshippers of demons, ghosts, and particularly the spirits of ancestors, whereas the more advanced Polynesians were polytheists who worshipped gods representing the powers of nature.

As with other primitive peoples, most Oceanic art took the form of decoration of utilitarian objects: pottery, canoe-prows, paddles, door-lintels, weapons, and so on were covered with designs some of them realistic, others abstract. It is difficult to generalise about these, especially as even in a single area such as New Guinea tribes might differ very considerably in their culture. In the north, for example, realism in representing the appearance of ancestors was usual (even to the extent of using the skull of the dead man as a basis for clay modelling); in the south masks for ceremonial purposes were almost wholly fanciful; in the east neither masks nor statues are found and designs are completely abstract. The Melanesians worked in clay and wood as well as on bark, bamboo, and tortoiseshell, whereas Polynesian art, which reached its highest level amongst the Maoris of New Zealand, produced carvings both in the round and in relief from wood and stone. A remarkable feature of both Melanesian and Polynesian art is the frequently-recurring motif of the "bird-man"—a human face with a long, birdlike beak—which had some religious significance. Ordinarily the Polynesians made use of abstract designs such as spirals interlaced with grotesque figures. Among the most striking, if not the most artistic, pieces of sculpture are the huge stone statues of Easter Island representing human heads and trunks; the figures, many of which are up to 36 feet high, have hollow eye-sockets, thin lips, and square chins. The whole construction is massive, and the works are curiously impressive; however, is spite of previous legends of their antiquity, they are known to be only a few hundred years old.

The arts of Oceania deteriorated rapidly after contact with the European explorers of the 18th century. Although in many cases contact between cultures has proved fertile, this can hardly be said in the case of the Pacific Islanders. It is interesting to note that the songs of the Hawaiians and Maoris which are known to people all over the world are *not* pure folk music and the major part of their inspiration comes from the hymns introduced by European missionaries. In this they resemble the American negro spirituals.

Primitive Art in the New World.

The Indian inhabitants of the Americas, before the arrival of the white man, were of mongoloid stock (*i.e.*, the same stock as the Chinese, Japanese, Eskimo, Lapps, Hungarians, Finns, and Siamese). They came from Asia by way of the Bering Straits about 15 or 20 thousand years ago, and moving south spread throughout the whole continent. It is possible, too, that later invasions came by sea, hopping from one Pacific island to another. The culture of these peoples corresponded to the late paleolithic in Europe and, to begin with, they were hunters and fishers. Later some settled down whereas others remained wanderers. The staple diet of the farmers was maize which they cultivated. The world is indebted to the American Indians for potatoes, sweet potatoes, tapioca, pineapple, peanuts, several types of bean, the cultivated strawberry, pumpkins, tobacco, cocaine, rubber, and quinine (not to mention chocolate, maple syrup, brazil nuts, and sarsaparilla). Throughout history most of the tribes remained primitive, if one can use this word for peoples who, while technologically backward compared with the white invaders, showed in many ways superior ability in the art of living (see *Journey Down a Rainbow*, by J. B. Priestley and Jacquetta Hawkes, for a comparison between the white man's life in Texas and the life of the Pueblo Indians in New Mexico just across the border). On the other hand, in certain regions, American Indian culture flowered into the fantastically complex civilisations of the Incas of Peru and the Aztec and other civilisations of Mexico and Guatemala.

In the far north, from Alaska to Greenland, live the Eskimos who have the distinction of being the first people to discover how to live in an extremely

cold environment, where firewood is non-existent, and thus to occupy a previously uninhabited part of the earth's surface. They live by fishing and hunting and solve their heating problems by making with stone tools lamps of soapstone which burn blubber; pottery is also made for lamps and vessels. In some areas iron is found or imported and made into tools, but for the most part the Eskimos are dependent on flint as a material from which knives, harpoon points, and adzes (a form of axe) are chipped. Skins of animals are made into clothes, tents, and boats. Igloos, the well-known snow-houses, are not the regular dwellings of Eskimos except on the central Canadian coast—elsewhere they are used only in emergency. Although the life of these tribes is as simple as any now in existence, the Eskimos are excellent craftsmen, engraving their pipes, bow-drills, and bag-handles of walrus ivory with realistic hunting-scenes.

North of the Rio Grande, in what was to become the United States, lived more than six hundred tribes of North American Indians whose environment varied from temperate sea-coast to the frozen arctic, from icy tundra to steamy swamps, from great forests to arid desert. Not unnaturally, therefore, their art shows great variations. All the tribes, however, had this in common: they had no written language; no domestic animals for ploughing, milking, producing meat, or carrying loads; and they made no practical use of the wheel, although they used it in children's toys. In the forests of the north-west, the most striking form of art was the totem-pole, often sixty feet high, and carved with grotesque figures of animals and men. These had no religious function, but represented legendary heroes or ancestors of the artist's clan; they endowed the family with prestige. Where wood was plentiful masks for ritual ceremonies, boxes, and other objects were also ornamented with carvings. The art of the hunters of the central plains was more limited and took the form of decorated animal skins made into robes, tents, moccasins, and shields. Sometimes the decorations were semi-realistic, depicting hunters and warriors which bear some slight resemblance to Aurignacian, Bushman, and Australian aborigine paintings without their vividness. Women were only permitted to make geometrical designs.

The two most interesting groups of Indians from the artistic point of view were the Indians of the Mississippi valley and the Pueblo Indians of New Mexico. The former carved squat stone figures in the round with great skill and realism which seem to indicate contact with the more advanced civilisations of Mexico. They also carved such objects as bowls and pipes. The latter are famous for their painted pottery produced by women and decorated with geometrical designs and occasionally with representations of animals and birds. Many Indian groups, both in North and South America, were competent in making baskets and the use of feathers for ornamentation. Typical also of the Pueblos are the patterns made by sprinkling coloured earths in complex designs on a bed of sand; these were used for ritual healing purposes.

The reader should be able to find examples of both prehistoric art and modern primitive art in any good local museum and in London, of course, at the British Museum where there are also two of the Easter Island statues. (For reproductions of Aurignacian paintings see *The Painted Caves*, by Geoffrey Grigson (Phœnix House).)

THE ARTS OF ANCIENT MEXICO AND PERU.

The civilisations of Mexico and Peru are among the most extraordinary in the world; to most of us they call up visions of ruined temples hidden in steamy jungles, human sacrifices, the Incas, and the Aztecs. But this view is an oversimplified one, for the two peoples were very different not only in the type of land they inhabited but also in their way of life and their arts. The Peruvians lived in the high plateaux of the Andes, the Mexicans in the jungles; the Peruvians were a gentle agricultural people, the Mexicans—in particular the Aztecs—were obsessed with a bloodthirsty religion. To the former civics was important, to the latter ritual. The Peruvians from an early date possessed bronze tools, the Mexicans almost up to the time of the Spanish conquest used tools of stone, yet the people with bronze had no written alphabet whilst the people who had only stone could write. Neither of the cultures was particularly ancient since both existed for the most part within the Christian era. Finally, the Incas and Aztecs with whom we are most familiar were the end-products of older and on the whole artistically superior cultures.

Peruvian Art.

The Indian peoples of ancient Peru occupied the territory which includes what is now Peru, Ecuador, Bolivia, and northern Argentina, and Chile. Along the coast there is a belt of flat, dry desert which rises steeply into the Andes where on the shores of Lake Titicaca, thirteen thousand feet up, still stand the huge stone ruins of the ancient city of Tiahuanaco. From archæological evidence it would appear that the Tiahuanacan culture originated in this coastal strip and flourished during the first five centuries of the Christian era. It was there that the arts of modelling and painting pottery reached high perfection. The city of Tiahuanaco was built in the 6th century by the people who lived in the neighbouring highlands who had been inspired by the creative activity of the lowlanders. But their culture was not so deep and had a shorter history. In the 15th century this part of the country was conquered and annexed by the Incas, the climax to 500 years of conquest and empire-building. But within a hundred years they were destroyed, suddenly and violently, by the Spaniards in 1532.

The Incas stand to the Tiahuanacans as the Romans stand to the Greeks. They were good organisers but not remarkable artists. Throughout their history these peoples knew nothing of writing, the wheel, iron, or the horse. But they had domesticated the llama and used its wool along with cotton for weaving their fabrics. With primitive implements they built great roads, stone bridges across canyons, and immense temples in which each stone—some of them eighteen feet long and eight feet square—fits perfectly into its neighbour. They had a wonderful system of soil conservation and their laws were in many respects more humane than those of early 19th-century England.

Unfortunately, the Spanish conquerors' desire to acquire gold was equalled only by their desire to save souls and both attitudes were equally destructive of Central and South American culture. The huge collections of gold and silver vessels and ornaments typical of this area were melted down in order that they might be more easily removed; buildings and sculptures were defaced in an excess of religious zeal; and the Inca records which, in the absence of a written language, took the forms of variously knotted cords known as *quipus* were burned for fear they might contain heretical material. But, if much was destroyed, much survived; for since the Peruvians mummified their dead and buried treasured objects along with the body, thousands of these have been found, mainly in the coastal area. The dry climate has preserved perfectly the fabrics which show a skill in weaving unequalled in history, and the featherwork in which they also excelled is still intact, as, of course, are the metal ornaments and the pottery. Two forms of pottery are worthy of special note, both from sub-cultures contemporary with the Tiahuanacan: that of the Nazca of the south and the Mochica of the north. Nazca pottery is thin, hard, smooth, and painted in many colours; some jugs are formed in the shape of human heads, whilst others are delicately painted with geometrical or naturalistic plant designs. The latter, according to Roger Fry, "show an austere subtlety of taste which can only be paralleled in the greatest works of European and Chinese art."

Typical of Mochica pottery are the small clay figurines, morbid in subject but highly competent in workmanship; they represent the deformed or mutilated, the sick, and drunken or erotic scenes. All pottery in both Central and South America was made without the aid of the potter's wheel which they did not possess.

Cities such as Tiahuanaca were not dwelling-places for citizens. Primarily they were devotional centres given up to the gods; the ordinary people lived in huts, as in Egypt, Mesopotamia, classical Greece, or for that matter, mediaeval Europe. It would probably be true to say of Peruvian architecture of this period that it is more impressive than artistic; but the sculptured reliefs on the stones of Tiahuanaca are interesting in that they set the pattern for designs on fabrics, pottery, and metal-work throughout the Andes and were later copied by the Incas. The main subjects represented are religious: gods with rays emanating from their heads, gods with tears running down their faces, and animals such as snakes, jaguars, and condors (a form of eagle) or various hybrids of these.

Early Mexican Art.

Whereas the Peruvians were essentially peaceful, the Mexicans were obsessed with two subjects: time and blood. The earliest tribes entered Central America from the north at some time about 1000 B.C.; these were the Mayas, whose priest-astronomers had by 600 B.C. introduced a calendar with a year of 365 days, calculated the period of revolution of the planet Venus within an error of 0·08 of a day every 481 years, knew how to predict when solar eclipses would be visible, and performed other feats of scientific achievement which it is not our business to describe here. They erected great buildings which differed from any others in pre-Columbian America in that they made use of the vault, which is, of course, an arched roof or ceiling. Instead of the stress being vertical with one stone laid directly upon the other, the Mayas, using concrete, were able by means of overlapping stones to bring the "legs" of the vault close enough to roof it in with a capstone. This is known as the corbelled or false vault.

Mayan civilisation reached its height about A.D. 200, and then, perhaps because of malaria, the Mayas left their temples to be overgrown by the jungle and moved north into the drier area of Yucatan where they built new cities but were finally overwhelmed by the Toltecs. The Toltecs copied Mayan architecture and built the great city of Teotihuacán which can be seen in the valley of that name to the present day. The ruins are worth a brief description as they illustrate in general the main characteristics of pre-Columbian American architecture: its hugeness, its impressiveness, its remarkable planning, its excellent sculpture, and (as architecture) its comparative failure. Here is an immense area dating from about A.D. 800, about three and a half miles long and two miles wide entirely paved with a plaster floor. At the one end, surrounded by a court-yard, is the Pyramid of the Moon, and from this a great avenue flanked by temples and other religious buildings leads to the Pyramid of the Sun at the other end; these "pyramids," so typical of Central American culture, are also found in the Andes, especially in the parts formerly occupied by the Nazcas and Mochicas. They are not, however, pyramids in the Egyptian sense, since they are not burial places but rather mounds with a flat top for the small temple where religious ceremonies were carried out. Thus in structure and function they more closely resemble the Sumerian ziggurat. The Pyramid of the Sun is almost 700 feet at the base and rises in a series of four terraces to a height of more than 200 feet. A stairway leads up one side from the courtyard below. The pyramids were made of adobe (sun-baked brick) faced with plaster and stone, and in the temples of such structures tens of thousands of victims had their hearts torn out as a sacrifice to the gods, particularly under the Aztecs who, about the time of the Norman Conquest, succeeded the Toltecs and remained in power until under their eighth ruler Montezuma II they were overthrown by the Spaniards.

The Mayas had discovered how to make paper from wood-pulp, and their books took the form of a single sheet several yards long and about eight inches wide; this was folded like a screen, each page being six inches wide. Their writing was, like that of the Egyptians, pictographic, each sign representing an idea rather than a sound as with our own alphabet. Only three such books remain, since the damp climate of Central America was not the best for preserving paper or fabrics. They are kept at Dresden, Paris, and Madrid, but have little interest as literature, since they deal exclusively with astronomy, divination, and ritual. Some Maya poems and stories exist which were copied down at a later date, but they too are more of archæological than artistic importance.

Mayan religious sculpture ordinarily takes the form of reliefs on stelæ or stone columns. In some respects it resembles Indian sculpture. There is the same formal treatment of gods contrasting with a tropical exuberance in the surrounding details. But the Mayas, unlike the Hindus, did not allow the exuberance of the design to interfere with the unity of the work as a whole. The artists knew nothing of perspective, although an impression of depth was sometimes given by combining high and low relief in such a way that the nearer figures stand out beyond the more distant ones. Difference in size of the figures was a sign of rank rather than an attempt at perspective. Religious art, like that of Egypt, ordinarily presented the figures either in profile or full-face, but the secular art—as seen, for example, in the mural paintings—is entirely different. It is realistic and exhibits a vivid fantasy, often dealing with unpleasant subjects: captives kneeling before the victorious chief, dead bodies, warriors holding up decapitated heads, and everywhere blood. Different, too, are the beautiful pottery figurines and small pieces of sculpture apparently without religious significance which create an impression of rest and placidity by their sensitive modelling. In fact, these people living in a stone-age culture have left us, says Roger Fry, more pieces of pure sculpture than the whole of Mesopotamian, or than the majority of modern European, civilisations. In Aztec times, art on the whole declined.

How shall we summarise the art of these extraordinary races? In most history books they do not even appear; they did not culturally influence other parts of the world, yet they built a complex way of life on the simplest foundations. Their architecture is probably more worthy of admiration than appreciation; we know nothing of their music, their literature is insignificant; but their pottery, their fabrics, their sculpture, and some of their mural paintings are great art. The cities—Teotihuacán of the Toltecs, or Tenochtitlán of the Aztecs (on the ruins of which Mexico City now stands)—how dead they are now! Their buildings mean little to us artistically, but the small things remain and a jug made by an unknown potter is worth more than all the monstrous temples of Montezuma or the Incas.

THE ARTS OF CHINA, INDIA, AND JAPAN.

Since these pages are primarily concerned with Western art, we are treating rather cavalierly the great arts of the Orient. We can do no more than sketch the barest outlines and hope that the reader will become interested enough to look elsewhere for more information to enable him to understand the arts of civilisations with different traditions and forms from his own.

Very little is known of the origins of Chinese art, since the history of ancient China is lost in legend. But with the discoveries of archæologists, especially of recent years, knowledge is increasing and the boundary-line between legend and true history is being gradually pushed back.

The earliest known inscriptions and wall decorations belong to the later part of the Shang dynasty

(*c.* 1500–1000 B.C.) but the brush used as an instrument for both writing and painting was not invented until 220 B.C., though it was probably an improvement of the tool then in use. Knowledge of early Chinese painting is for the most part based on later copies and written records. Similarly, although the Indian hymns of the *Rig-Veda* were probably composed about 1000 B.C., they remained unwritten until very much later, and the frescoes of the Ajanta caves—possibly India's richest inheritance—date from only 200 B.C.

The Chinese and Indian civilisations, which arose in the great river-valleys of the Yellow River, the Yangtze, and the Indus, though younger than the civilisations of Egypt and Mesopotamia, are the oldest still-flourishing civilisations in the world, since their arts have had a continuous history of over 3000 years.

The Art of China.

Little has been preserved of the art of the semi-legendary Shang dynasty and the Chou dynasty (*c.* 1000–256 B.C.) except for some exquisite bronze sacrificial vessels decorated with animal motifs which rank among the great art treasures of the world. The Shang people worshipped the spirits of their ancestors and the vessels were used for offerings. They were made by the *cire-perdue* method. (*See* G8 (2).) Mirrors decorated with animal motifs or geometrical designs have also been found, some dating from the 6th century B.C. It is not until the Ch'in dynasty (221–207 B.C.) that we really enter recorded history at all. Ch'in artists produced bronze and jade objects and indulged in somewhat grandiloquent statues and giant bells. The Ch'in was followed by the Han (202 B.C.–A.D. 220), a period of great artistic achievement when Buddhist art took its place alongside the native art and portrait painting began. In the T'ang dynasty (618–906) landscapes first made their appearance, poetry flourished, and sculpture reached its full maturity. Painting was at its finest during the Sung dynasty (960–1279), the greatest period of art in old China, and the beginning of modern times. In 1279 the Sung emperors were overthrown by the Mongols, who thereby made China part of a kingdom extending from the Pacific to the Baltic; this Yüan dynasty was followed by the Ming (1368–1644) and that in turn by the Manchu, which lasted until 1912. These rather boring dynastic names are given here since they so commonly appear in descriptions of works of art, and it is useful to have some knowledge of their dates.

When we are dealing with art traditions very different from the European, it is wise to have a certain humility; we have no right to assume that art is a sort of universal language with the implication that Oriental art can be as readily appreciated as our own. But this is what has all too often happened. Chinese art became a fashion in Europe from about 1669 when Louis XIV of France held a Court Ball dressed in what he believed to be Chinese clothes. The great "Chinoiserie" had begun, and its result was that for many years Europe was interested in Chinese art but selected, and indeed, imitated bad periods and the worst styles. Not unnaturally, Oriental merchants took advantage of this, and produced a great deal of rubbish which it has taken generations of experts to disentangle. Today those relics which our forebears admired are falling out of approval and the real art of the East is coming to be understood.

The Chinese artist does not look at the world from our point of view, and to understand his art we have to develop a new way of looking at things. "The art of China," says Curt Sachs, "has in all its amazing diversity one aim: to press on life and nature the seal of essence, dignity, unearthly aloofness, eternity. In its boldest realism, it is still unreal, fantastic, and dreamy." It does not—except for a few periods—care for the grandiose; hence there has been little imposing statuary or architecture save that of the Buddhist caves of the 6th century. Like those of India, they are enormous and filled with figures carved in niches cut out of the rock. (One might also mention, mainly as a curiosity, the Rococo palaces which, whilst Europe was imitating China, the Emperors K'ang Hsi and Ch'ien Lung built in imitation of Versailles.) The greatness of Chinese art has been in painting, sculpture, pottery, textiles, and literature. Chinese music (G35) is so different from our own that it is difficult to assess. If music is, as Schopenhauer described it, the purest of the arts since it alone has a means of communication not in common use for other purposes, then it is surprising that perhaps of all the arts it is the least communicable when it comes from another culture.

Painting. The art of China, is formal, stylised, serene. "The noble-minded man's music," said Confucius, "is mild and delicate, keeps a uniform mood, enlivens and moves. Such a man does not harbour pain or mourn in his heart; violent and daring moods are foreign to him." This is equally true of the painting in which there is none of the colour, violence, or realism of European art. Although something of this sort was apparent during the early T'ang dynasty, the most typical is the lyrical and gentle art of the Sung. Painting is done with a brush and in water-colours (for the Chinese artist it was unnecessary to worry about complicated problems of mixing colours in oils, different methods of using the brush, or what background medium he was going to use); he painted on silk or paper and ordinarily with one colour. Chinese painting, in which the medium was often Indian ink, is, in a sense, an extension of Chinese handwriting, which is also done with a brush and is regarded as the most important art form. Typical, too, is the interest in nature, which appears at an early date.

In Europe, the first landscapes do not appear until the work of Patinir (1485–1524) mentioned by Albrecht Dürer as "Joachim the good landscape painter," whereas in China they appear in the 3rd century A.D. The European throughout much of his history has thought little of nature and much of people, and even during the Renaissance a landscape was little more than a background to the figures—it was painted from memory and indoors. Indeed, many centuries later Samuel Johnson had nothing better to say of the mountains of the Scottish highlands than that they were "monstrous protuberances."

The Chinese were absorbed in nature, but never interested in the literal depiction of what they saw. Every one of their landscapes has a quality of abstractness; it does not simply show a particular piece of land but rather tries to impart some feeling about the world in general. In these pictures the figures are relatively insignificant and little attention was paid to perspective; one is given the impression of tiny human beings overwhelmed by the immensity of nature. Commonly the paintings took the form of long sheets mounted on silk for hanging on walls as panels or horizontal ones on a cylinder which had to be unrolled piece by piece for the whole to be seen. Tempera and oil-paintings were unknown and the only other form of the artist's work are the frescoes of Buddhist temples, which date from about the 5th century. The great classic periods of Chinese painting were perhaps the T'ang and Sung dynasties, and Arthur Waley has suggested that their interest in nature was due in part to the desire of educated people to escape from the over-centralised bureaucracy under which they lived. The towering cliffs, waterfalls, and mountains show an essentially romantic attitude towards the landscape.

Lacquer, Jade, and Porcelain. There were contacts between China and Europe from a very early date. China has been influenced by Europe through other channels too: indirectly by the Greeks by way of India when Buddhist missionaries brought the form of sculpture resulting from contact between India and Alexander the Great; more directly through relations with Britain and France in the 18th and 19th centuries. China, in turn, has influenced the art of much of Asia and all of Europe. Lacquer is a Chinese invention, although it has never gained much approval in the West. But porcelain, invented in China in

possibly the 5th century A.D. and not known in the West until the 18th century, has been accepted and even dignified with the name of "China." Carvings in jade are also a typically Chinese art, although, of course, practised elsewhere, (*e.g.*, in pre-Columbian America).

Influence of Buddhism. The advent of Buddhism and its growth towards the 5th century A.D. had a profound influence on the art of China. But it was not always a good influence. Religious art, at least in its early phases, tends to be stereotyped and formal, and in the case of China there developed a sculpture presenting only the slightest variations on the subject of the contemplative Buddha, sometimes huge, sometimes small, at all times competent, but mostly dull. Painting, too, was influenced by Buddhism. However, within two or three centuries Buddhist art had lost much of its original severity and during the T'ang dynasty flourished alongside a secular art. The succeeding Sung dynasty was the high point of Chinese art—a sort of Chinese renaissance. The landscapes have been mentioned, but one of the great developments of this period was its pottery, which depends for its effect not so much on decoration but on its form and finish in lovely single-coloured glazes. From this period art on the whole has deteriorated. During the reign of the Ming emperors there were good painters, fine textiles, and excellent porcelain in a new technique of enamel colours imposed over the glazing. But the spirit had gone. The art was often perfect, but it was superficial and affected.

Architecture is not a significant part of the genius of China. For much of her history building was in wood, and few of the buildings existing today are older than the 18th century. Almost none are older than the Ming period.

Literature. Chinese literature begins with the *Shih Ching* or *Book of Songs*—a collection of hymns, poems, and folk-songs composed, it is believed, between the 11th and 6th centuries B.C., but written down many years later. The 6th century was also the age of Confucius and Lao-Tzû, the religious leaders (this was, too, the time when Isaiah was preaching in Babylon, Buddha in India, and Heraclitus in Ephesus). Confucius (551–479 B.C.), lived during a time of civil war, and, disgusted with the state of his country, he set about attempting to teach the rulers wisdom—at the best no easy task. There is no evidence that he himself wrote anything, but, as in the case of Socrates, his disciples copied down his sayings in a book now known as the *Analects*, one of the classics of Chinese literature (obtainable in translation). Basically he was concerned with "gentlemanly" relations between one person and another, was entirely practical, and took only the slightest interest in the supernatural. He represents one pole of the Chinese way of life, as Lao-Tzû represents the other, the mystical, pole. Confucius is the practical, upright, and conservative man of north China, Lao-Tzû the tolerant, passive, and imaginative temperament of the south. The book attributed to Lao-Tzû (born about 604 B.C.) is the *Tao-te-ching* beautifully translated by Arthur Waley, one of our greatest scholars in this field, as *The Way and Its Power*. This book too must have been written down many years after Lao's death. Mencius, another religious teacher, who lived two centuries later, was a follower of Confucius. His writings in *The Book of Mencius* are also considered part of the Chinese literary tradition.

The T'ang dynasty was the great period of Chinese literature. Of the many poets we can only here mention Li Po, by some considered to be China's greatest poet, although the Chinese perhaps prefer Tu Fu. Li Po was the people's poet, Tu Fu the poet of scholars. Their poems and many others may be read in Waley's translations. Chinese poetry is a delight; it is practical at times, mystical at others, describes nature lovingly, and is humorous and sceptical. The attitudes expressed are in fact extraordinarily English. The English reader feels immediately in touch with Chinese writers in a way which he does not with, for instance, Indian. In Indian literature there is little of such humour as this: "Families when a child is born, want it to be intelligent/I, through intelligence, having ruined my whole life, only hope my son will grow up dull and stupid/when he will end a long and successful career by becoming a Cabinet Minister;" or the tragi-comedy of Li Po (was it the poet one wonders?) who "died drunk—he tried to catch the moon in the Yellow River."

Chinese drama until quite recently was sung to music and was more like opera than a play in the European sense. The novel as an art form developed about the same time as in Europe—that is, the 18th century. One of the best-known is *The Dream of the Red Chamber*; but most literature was written in the ancient tongue which was not available to the man in the street. (It is rather as if in Europe we had kept on using Latin for literature and English for everyday speech.) This situation was changed only after Sun Yat-Sen's revolution in 1917, when the colloquial language was increasingly used. The best known writer in this idiom was Lu-Hsun, whose novel *The True History of Ah Q* is still popular. He died in 1936.

The Art of India.

The history of India is the history of a country inhabited originally by dark-skinned Dravidians who were driven towards the south by the light-skinned Indo-Europeans. The art of India resembles that of China in that, although Indian civilisation is ancient, its significant art is not much older than a few centuries B.C. Like China, too, India influenced the art of surrounding countries: Burma, Ceylon, Indo-China, and Tibet. But there the similarity ends. Indian art is essentially religious whereas the Chinese, even in their religion, were essentially sceptical; Chinese art is formal and controlled, Indian art is exuberant, florid, and elaborate in a way which makes it difficult for Europeans to understand; Chinese art takes pleasure in the small things, but the Indian genius lay in the direction of monuments and buildings. The Indians produced nude figures and to the Westerner they seem obsessed with sensuality and passion as the Aztecs were obsessed with war and blood. The Chinese rarely showed nude figures, and, as we have seen, disapproved of violent emotions.

The Indus valley civilisation lasted from about 3000 to 2000 B.C. It was discovered by chance in 1860 by two brothers John and William Brunton who were seeking a source of bricks for the railway they were building from Karachi to Lahore. What they found, in a shapeless heap of rubble, was the ancient city of Harappa. But it was not until the nineteen-twenties that serious investigations began and Harappa's twin city Mohenjo-daro was discovered. However, this civilisation produced little art. Stuart Piggot's book *Prehistoric India* (which is worth consulting if you wish to know more) says that there is a terrible efficiency about the Harappa civilisation which recalls the worst of Rome. Everything appears to have been standardised, from the houses to the streets, which were, as in modern New York, at right-angles to each other; even the pottery was standardised in what Professor Piggot describes as "a variety of depressingly utilitarian forms." At some time about 2000 B.C. the white-skinned Indo-Europeans invaded India from the north-west, occupied most of the area, and set up a caste system to prevent mingling their "pure" blood with that of the dark Dravidians. They were not highly civilised, and their ideals are expressed in their favourite god Indra, who was depicted as strong, pot-bellied, a huge eater and drinker, who fought with bow and arrow from his war chariot.

Literature. From 1500 B.C. date the hymns of the *Rig-Veda* which were transmitted verbally until copied down much later. They are important since they are the Pentateuch of the Hindu religion. In content, as Max Müller says, they vary from the true, genuine, and sublime, to the childish, vulgar, and obscure.

It will be seen, then, that we cannot discuss Indian art without reference to religion. Another classical religious work, the *Upanishads*, appeared about the 6th century B.C.; it was an approach to a form of monotheism; "God," it is written, "is he who, dwelling in the earth, is other than the earth, who inwardly rules the earth." The older gods were not disregarded, but they were represented as the various aspects of the universal Atman or spirit. The *Upanishads* are important because their metaphysics must have influenced the Buddha, Siddharta Gautama (560–480 B.C.). The other great religious leader of this period was Mahavira, the founder of Jainism. Later, in the 13th century, India was to come under the influence of the Moslems, and a new language, Urdu, grew out of the mixture of Persian and Hindi. Secular influences on the art of India came from Mesopotamia (which had contacts with the early Indus valley civilisation), and Alexander the Great, whose invasion brought Greek concepts to Indian sculpture.

Other important literary works are the epics of the *Rамāyana* and the *Mahābhārata*; the religious book perhaps best known in Europe, the *Bhagavad-Gita*; and the works of Kālidāsa the greatest poet writing in Sanskrit, who lived about A.D. 400. Most of these works can be read in translation in the Everyman series; perhaps the two most likely to be enjoyed by the European reader are the *Bhagavad-Gita* and the *Sākūntalā* of Kālidāsa. The epics are to the uninitiated rather boring. From the 19th century onwards Indian literature was influenced by English forms. The most important writer of this century was Rabindranath Tagore, whose poems have appeared in many translations, and there are a number of modern novelists whose work is excellent.

Sculpture and Architecture. Sculpture is the important art of India, and the temples are covered with figures. But, on the whole, little sculpture or architecture belongs to an early date. If we divide Indian art into artificial periods we must begin with late Buddhist times (3rd century B.C. to 3rd century A.D.). Much of what was built during this time was in wood and has perished, but the stupas of Bharut, Amaravati, and Sanchi remain. The stupa was originally a mound built over a tomb, but later it became a large pyramidal mound covered with sculpture erected over a sacred relic. The sculpture is, by European standards, ornate, but reflects at this stage scenes of everyday life in a manner quite different from that of the classic period (4th–8th centuries), which is large, religious, and imposing. The Jains and Buddhists were first in the field of sculpture and architecture. Belonging to the classical period are the rock temples of Ellora (Hindu) and Ajanta (Buddhist) in Hyderabad and the caves of Elephanta (Hindu) which are carved out of the solid rock. There are at Ajanta twenty-nine Buddhist caves begun about 200 B.C., which were intended partly for worship and partly for housing Buddhist monks. Their walls are adorned with sculpture and frescoes which are, perhaps, the greatest in Indian art, depicting scenes in the life of Buddha. Had it not been for the British, they would have been lost for ever; when discovered by soldiers in 1819 they were being used as cattle-sheds.

The vast majority of buildings and sculptures now in existence belong to the period after the 8th century A.D. By this time temples had become elaborate to a degree that seems fantastic by Western standards—they are a maze of towers, courtyards, pillared halls, and statues. In the 17th-century temple of Madura there is a central shrine with an immense pyramidal tower covered with a profusion of sculpture and surrounded by five other towers; these are in the centre of a maze of halls, courts, and gateways. The figures arranged in row after row have a multiplicity of heads and limbs in an extravagant mixture of animal and human.

Whereas the first centre of any complex Indian civilisation was in and around the Indus valley, by Buddhist times the centre was in the Ganges area. (Oddly, Buddhism never became as important in India as it later did in China and other countries.) In the 11th century came the Moslem invasion. Since the Moslems, like the Jews, took very seriously the belief that "graven images" should not be produced, there was no sculpture and the only paintings were miniatures or abstract designs. However, the Moslems built many mosques and everyone has heard of the Taj Mahal at Agra, built in honour of the wife of the Shah Jehan.

Modern Indian art is torn between the style of the Ajanta frescoes of the past and the schools of modern Europe. It is an Indian, Dr. Coomarswamy, who states that "our present poverty in works of art, in competent artists, and effective connoisseurship, is unique in the history of the world" (*The Cultural Heritage of India*).

Japanese Art.

Japanese art in its early stages was largely inspired by that of China, and any important art dates from about the 7th century A.D. when Buddhist missionaries and Chinese and Korean artists were entering the country. It was not until the 10th century, during the decay of the T'ang dynasty in China, that Japanese art began to come into its own and assume an individual character. The Yamato school produced coloured paintings, some of them as illustrations to literary works, of great dramatic quality. Ordinarily the took the forms of rolls (already described und Chinese art) and in Japan known as *Makimono* In the 13th century, Chinese influence comes ba once more and Japanese art reflects the painti and sculpture of the Sung period with its lan scapes in Indian ink and pictures of animals a plants. The greatest master of painting in th manner was Sesshū (1420–1506). Then once mor Japanese art, absorbed with nature, found its own expression in the Tokugawa period (1603 1868). Most Japanese of all was the Kōets school in which the 17th-century artists Kōets and Kōrin were the important figures.

The fine arts in the civilisations of the East were to a large extent aristocratic; both India and China possessed a literature in a language other than that spoken by the people, and obviously the poorer classes could not afford to buy paintings. But in Japan the Ukiyo-e school produced coloured woodcuts which the less well-to-do could afford; these works dealt mainly with scenes from the lives of common folk.

To the Japanese the important arts are painting, pottery (learned from the Koreans during the Japanese invasion in the 16th century, and largely concerned with the important ceremony of tea-drinking), lacquer, and gardening. Metal-work, especially on the hilts and guards of swords, is also characteristic. Architecture and large-scale sculpture is much less important than in Europe or India although there are many beautiful buildings. But what mostly impresses the European about these are their settings.

According to an ancient folk-tale, a rich nobleman built a garden and made an island in the middle of a small lake at some time during the 6th century. This aroused such interest that garden designing has ever since been regarded as a major art form. Japanese gardens are the loveliest on earth, and their changing fashions have reflected the country's historical development. The earliest gardens were full of colour with plum and cherry blossoms and variegated flowers, but, at the end of the 12th century the feudal system began and the warriors accepted as their philosophy the austere Zen Buddhism which had also been imported from China. At this time the trend in gardens was towards subtle green hues—the moss garden, with many types of moss underfoot and trees of many shades of green. The arrangements were symbolic: for example, the garden of the Saihoji Monastery at Kyoto was designed by Muso Kokushi (1275–1351) to symbolise the process of attaining supreme wisdom. In the 16th century the feudal order collapsed, and a period of tranquillity began of which the symbol was the tea-garden with stepping-stones, water-basins,

and quiet patterns of trees and shrubs. There are, too, the sand-garden in Kyoto's Silver Pavilion with an area of silver sand raked into patterns, and the rock-garden of the Ryoanji Temple, in which an area of patterned and well-tended sand has one large rock surrounded by moss jutting out in the centre to symbolise the idea of captive cliffs in water. These gardens still exist today and are carefully preserved. The names of the designers are as well-known as those of painters and writers.

The Japanese resemble the Germans in that they manage to combine a love of nature and beauty with a ferocious militarism. These tendencies are reflected in both literatures. On the one hand there are delicate and rather sentimental lyrics in which the poet grieves to see the cherry-blossoms fall; on the other brutal war-tales and accounts of bloody revenge in family feuds. The typical form in poetry is the short poem of four or five lines such as the following by Minamoto no Shigeyuki dating from about A.D. 1000:

> Winter has at last come
> Unmistakably, even to my cottage
> In the land of Tsu,
> Which lies hidden
> Among the rush-leaves.

The war-tales belong mainly to the feudal period and describe the fights between various clans; they are of little interest, but the brief lyrics are a form used to the present day.

Perhaps the Japanese literary work best known to Europeans is the 10th-century novel *The Tale of Genji*, by Lady Murasaki, a story of court life (translated by Arthur Waley); this was written prior to the feudal period at a time when art was aristocratic and elegant. The novel is well worth reading. From the feudal period date the Nō plays, the classical and highly formal drama of Japan, and during its later part the more popular *kabuki* plays which, having more action, are more widely accepted today. In Japan, as in China, popular literature began to develop in the mid-19th century and from this time, too, Western forms were increasingly accepted.

As Roger Fry says, a sort of sentimental insincerity has been the bane of Japanese art, which perhaps assumed its truest form in the cheap wood-cuts of the 18th and early 19th centuries. These were "vulgar" only in the best sense, and at least two of the artists, Hokusai (1760–1845) and Utamaro (1754–1806), produced genuine works of art. It was largely these woodcuts which introduced the art of Japan to Europe for the first time in the middle of the 19th century, and they had a considerable influence on such artists as Whistler and Manet.

THE GREAT AGES IN EUROPEAN ART.

Thus far we have been discussing cultures which for the most part lie outside our own tradition. From now on we shall be dealing with European civilisation beginning with Egypt and Mesopotamia, which, if not strictly speaking part of Europe, nevertheless fostered a continuous cultural development which reached us by way of Crete, Greece, and Rome. We must also consider Byzantium, which influenced European and especially Russian art; Persia, which influenced Byzantium; and the Arabs who occupied parts of southern Europe for some centuries, influencing thereby Spanish art forms and European learning. These lands had an effect on our culture which India and China did not, or at any rate did not to any extent until many centuries later.

THE ART OF EGYPT.

About 3000 B.C. Egypt came under the rule of a unified monarchy which, in the person of the pharaoh who was both god and king, combined secular and religious powers in a highly conservative and monolithic state. From this time onwards Egyptian civilisation endured with relatively little change for nearly five thousand years, and art changed hardly at all. Such a state tends to produce an art concerned with enhancing its own prestige, as may be seen from the examples of pre-Columbian America, Mesopotamia, and the modern totalitarian countries. Enormous and artistically negligible statues and buildings are erected, the main function of which is to reflect the power of the central authority. That such a situation provides little opportunity for the artist to express himself freely is clear. He has to express himself in stereotypes, and when, as in Egypt, religious conservatism is added to that of the state, he is expected in addition to produce objects of ritual significance which have as little æsthetic purpose as the objects sold in the shops of Lourdes. Hence the pyramids, made to impress rather than to look beautiful, the enduring granite statues, the ten identical figures of himself placed in the tomb of Amenemhet I, and the tomb furniture which at times suggests the mass-production store. This was commercial art based on magical beliefs, and as Roger Fry pointed out, it would have been absurd for the artist to give such objects aesthetic value. A great deal of Egyptian art was shoddy, crude, and standardised; yet genuine works of art—often quite small objects—are found at almost every period.

Architecture.

The Egyptians were the first architects, the first people to erect buildings not only for their practical function but also to look beautiful. The mere presence of ornament does not create beauty nor are the size, cost, or profusion of decoration on a building valid criteria of its excellence. A building, if it is to deserve the name of architecture, must be: (*a*) well-planned and well-built; (*b*) suited to the purpose for which it is erected; (*c*) of its day and age; and (*d*) capable of delighting the eye of the beholder, that is, æsthetically stimulating and satisfying. As Herbert Read says: "In a perfect work of art all the elements are interrelated; they cohere to form a unity which has a value greater than the sum of these elements."

The Pyramids and Temples. Judged by these standards, the pyramids of Egypt or the rock-tombs of a later period are architectural failures. They are too simple in their form, and however pleasing simple shapes may be, we cannot describe cubes, globes, or pyramids as art. Lethaby, in his well-known book on architecture, describes the pyramids as "more like hills of stone than architectural works," and another writer says of the Great Pyramid that it is "a uniform solid triangle of masonry, mechanically accurate and utterly expressionless in its dead monotony." Of course, the pyramids do not now exist in their original form and when first built they were not simply isolated peaks jutting out from the desert. Each was part of a complex of buildings with a valley temple on the bank of the Nile in which the dead king's body was embalmed, with a causeway leading from this to the mortuary temple close to the pyramid, and the pyramid itself. The walls of the temples and causeway were elaborately painted and decorated with reliefs and the whole surface of the pyramid was covered with polished slabs (later removed by the Arabs to build their mosques in Cairo). The first to be erected was the magnificent Step Pyramid at Saqqara, built about 2950 B.C. by the pharaoh Zoser under the guidance of his vizier Imhotep; this has a slightly oblong base, rises in a series of terraces, and is built of quite small blocks. The Great Pyramid of Khufu, however, is constructed of more than two million enormous blocks of limestone each weighing two and a half tons in a structure nearly 500 feet high and 750 feet square at the base. The burial chamber lies at the bottom of a shaft beneath the structure, and as in other pyramids there are additional passages and chambers. Completed about 2885 B.C., this was the largest structure ever erected by man, and even today it is only exceeded in size by the Grand Coulee Dam in the United States. Yet only a century before the Great Pyramid was built no stone buildings existed anywhere in the world; Imhotep was the inventor of the art of building in hewn stone.

Nowhere is the innate conservatism of the Egyptians seen better than in their temples. The important surviving buildings belong to three widely separated periods, and of these only one, the "Granite Temple" near the Sphinx at Giza, was built within the first seventeen dynasties, its probable date being about 2900 B.C. The great age of temple construction was from the 18th to the 20th dynasties (*c.* 1550–1100 B.C.), and to this period belong the buildings at Thebes (Karnak, Luxor, the Ramesseum, Deir-el-Bahari, and Medinet-Habu) and that at Abydos. All the rest—Dendera, Edfu, Esna, and Philæ—were built by the Ptolemies who controlled the country within the empire of Alexander the Great and therefore date from 332 B.C. to the Roman conquest three centuries later. Yet all these buildings, which cover a span of time from about 3000 B.C. right up to the Christian era, differ from each other only in minor details, and, says Martin Briggs, "the temple at Dendera, erected just before the birth of Christ, might have been built thirty centuries earlier."

Of course many other buildings must have existed, but the tourist cannot help contrasting the flat Delta area with its almost complete absence of large historic monuments, other than the pyramids, with the rich crop to be seen in the region of Luxor, and even these are mostly temples and tombs. There were two main reasons for this: first, the Delta where Egyptian civilisation began was also the region where annual floods slowly but inexorably buried ancient cities and buildings beyond recovery; secondly, temples and tombs were strongly built because so much importance was attached to the life after death. In contrast, houses, villas, towns, and even palaces were relatively flimsy in construction since they were merely temporal structures. Pre-dynastic and early dynastic temples were built of wood, so none of these have survived.

The Temple of Karnak.

As an example of Egyptian temple architecture we may take the great temple of Karnak. This was approached from the town by a sphinx-lined avenue over a mile long leading to the gateway with its two huge towers grooved for tall masts carrying coloured banners. Within the gateway lies the open courtyard flanked by great columns, wide in the middle and narrower at the top and bottom, with rows of statues of the animal-headed gods Thoth, Anubis, and Horus. The courtyard opens into the Hypostyle Hall roofed over with enormous flat slabs of stone supported by further columns and lighted by means of windows situated just under the roof. The walls and columns are decorated with paintings, carved inscriptions, and bas-reliefs. At the far end of the hall lies the small dark sanctuary, the dwelling-place of the god on earth, and rooms for use by the serving priests. The sanctuary, as in other temples of the ancient world, was never entered by the laity.

Although this building can hardly be described as beautiful in the classical sense, its total effect is so stupendous in its massive strength as to dim the critical faculties. The Hypostyle Hall is the largest roofed-in space of any temple in the world, covering an area almost equal to the whole of Canterbury Cathedral; yet it is only the main hall of a building which, if set down in London, would stretch from Piccadilly Circus to Hyde Park Corner. Each of its twelve central columns is 69 feet high and 12 feet in diameter, and each is surmounted by a capital on which a hundred men could stand. Altogether, there were 134 columns in six rows with sculptured capitals at the top. This type of decoration, which took the form of palm-leaves, papyrus flowers, or the lotus, clearly stems from early days when wooden temples had columns of tree-trunks or bundles of papyrus reeds.

Another familiar feature of Egyptian architecture was the obelisk or commemorative pillar, a type of structure first erected during the 11th dynasty. The two "Cleopatra's Needles" in London and Paris date from the reign of Queen Hatshepsut, who lived some 1500 years before Cleopatra was born.

Sculpture.

Early figurines and amulets modelled in clay or wood are found in pre-dynastic times, but later ivory and stone were increasingly used. Animal forms were common, and a baboon in alabaster and a lion in granite survive from the 1st dynasty. The first datable object is the well-known palette of Narmer in the Cairo Museum which is carved with reliefs depicting the pharaoh's victories. It belongs to the 1st dynasty, perhaps about 3200 B.C. But the main Egyptian achievement in sculpture is the portrait statue, arising out of the belief that the soul of the dead required an accurate representation of the body in order to attain immortality. This need for a naturalistic treatment conflicted to some extent with the prestige motive already described, and throughout Egyptian history periods of comparative realism alternated with periods of formalism. The large royal statues are shown in one of two postures: standing, with the eyes gazing steadfastly into space, arms by the sides with clenched fists, and the left leg advanced, or sitting bolt upright with legs and feet close together and the hands laid palm downwards on the thighs. During the 4th dynasty when a demand had arisen for representations of the dead amongst the nobles many excellent naturalistic statues and heads in wood, copper, and hard or soft stone were produced. Some statues were of painted limestone; for the Egyptians, like the Greeks, had the custom of painting their sculpture. Unlike the Greeks, however, they never showed the slightest interest in the naked body; the muscles are mere contours beneath a polished surface and display no interest in the underlying anatomy. Yet their characterisation was often remarkable, as, for example, in the 5th dynasty portrait of a scribe which portrays perfectly the intellectual with a keen and alert mind. Middle Kingdom sculpture gave up the use of painted limestone for more monumental likenesses in dark hardstone. The pharaoh was represented in a more human and less divine form, and to some extent royal statues were replaced by those of the heavenly king Osiris. This was a period during which some measure of power was passing from the hands of the king to the lower orders—a fact attested by the immense number of crude and cheap objects it produced. The ordinary man wanted something better than he had been used to in the past, but had not yet acquired the taste to distinguish good art from bad.

The only person ever to crack the crust of Egyptian conservatism was Amenohais IV, or Akhnaton as he later called himself. This heretic pharaoh of the 18th dynasty attempted to replace the polytheistic beliefs of his people with a religion based on the one supreme sun-god named Aton (hence Akhnaton's name). Sculptors and painters were encouraged to depict what they saw regardless of whether or not their realism might shock those used to the dignity and solemnity of official art and the results may be seen in some of the treasures which have come down to us. Amongst these are the torso of a little girl, believed to be Akhnaton's daughter, now in University College, London, and the portrait heads in Berlin which include the well-known head of his queen Nefrotete. Fry considered the torso to surpass in sensitivity of modelling anything produced by the Greeks, and the portrait heads to anticipate the best work of the Italian Renaissance. Akhnaton's artists depicted him as he was, lifting his daughter on to his knees, leaning on his stick, or walking with his wife in the garden. But these developments came to an end with Akhnaton's reign, and his weak son-in-law Tutankhamen gave in to the conservative forces of the priesthood. The artist returned to copying the past, although some realistic portrait sculpture dates from shortly after this time. Still later, sculpture came to be strongly influenced by Greek Hellenism, and the older Egyptian busts may have influenced the Romans.

Wall Decorations and Paintings.

From the time of Zoser (2950 B.C.) almost every part of a building, inside and out, was painted or

carved in relief. Much the most common decoration was the hieroglyphic inscription, for, like the Chinese, the Egyptians took pride in ornamental writing. During the 4th and 5th dynasties, low reliefs depicted scenes from country life, warfare, the hunting-field, or river-fishing, and in these oxen, hippotami, gazelles, donkeys, birds, fish, and men are portrayed with a keen sense of design and some attempt at naturalism. The painting was in tempera (*i.e.*, on dry plaster) and in early times only black and red were used mixed with a binding substance soluble in water—frequently egg. Later, yellow, green, blue, and ochre were employed. Painting reached its highest level between the 12th and 19th dynasties, and the relative freedom of the great 18th dynasty is nowhere seen to greater effect than in the paintings of the daughters of Akhnaton now in the Ashmolean Museum at Oxford.

The basic limitations of Egyptian painting lay in the artist's conventional use of colour and his ignorance of perspective. There were no shadows, nor did one colour merge into another. By convention hair was black, garments white, vegetation green and water blue; by convention important people were taller than the less important, men than women. Everything was painted as seen from the most conventional angle: the head in profile, the eye as seen from the front, fish from the side, but the pool in which they swam from the surface. This, of course, is quite logical; for a child asked to draw a penny will draw a circle rather than a straight line, although the latter is equally valid depending on the viewpoint of the observer. But it does not give the impression of solidity or depth, and although the Egyptians and the Cretans were the greatest painters of their time, and in fact influenced each other during the period of the Empire, they produced no masterpieces by world standards.

Literature.

Egypt produced the first literature known to history, by far the greater part of it religious. However, there were also texts dealing with medicine, mathematics, astronomy, and geography, and books, or rather papyrus rolls, on correct conduct, social criticism, and historical events. Poetry and the short story were common forms. Of religious works, a Memphite drama dating from the founding of the 1st dynasty mirrors, according to Breasted, "the oldest thoughts of man which have anywhere come down to us in written form," but best known are the *Coffin Texts* of the 12th dynasty and the *Book of the Dead* of the 18th dynasty. These are collections of texts, the former written on the inside of the wooden coffins of noblemen between 2300 and 1800 B.C., the latter papyrus rolls containing incantations and spells buried in the humbler graves from about the 16th century B.C. Both were derived from the *Pyramid Texts* of the 6th dynasty on the walls of the royal tombs. Egyptian influence occurs in the Bible in the *Psalms* and the *Book of Proverbs*. The 5th dynasty "Instructions of Ptah-hotep" is the first manual of good behaviour; social criticism is found during the feudal period notably in *The Eloquent Peasant*, which reproaches the official classes for their exploitation of the poor. Egyptian poetry, found in some anthologies, has a lyrical quality which remains unsurpassed until the times of the Hebrews and Greeks; the poem *The Dialogue of a Man Weary of Life and His Soul* is surely one of the great poems of the world. The short story, often in a form reminiscent of the tales of the *Arabian Nights*, frequently dealt with the adventures of its hero during wanderings in distant lands. *The Shipwrecked Sailor* and *The Tale of Sinuhe* come into this category.

THE ART OF MESOPOTAMIA.

Mesopotamia, the land of the Tigris–Euphrates valley, is an open plain exposed to invasion on all sides; although fertile, it has little wood or stone. In ancient times its rulers were warlike autocrats and a powerful priesthood. The non-semitic Sumerians ruled from about 5000 B.C. to c. 1850 B.C. when they were displaced by the semitic Babylonians, who in their turn were conquered by the Assyrians a thousand years later. The Babylonians returned in 612 B.C. for a mere century before they were finally defeated by the Medes and Persians. Mesopotamian art reflects these facts. As well-executed as Egyptian art, it is crude and brutal rather than sensuous and elegant; it rarely depicts women; it uses mud-brick in place of stone, which, like wood, is used only for luxury articles; but like much Egyptian art it is concerned with power, prestige, and religion.

The beaten mud or sun-dried brick used in place of stone made it inevitable that the great palaces and temples would soon crumble to dust. Ur, Babylon, and Nineveh were forgotten mounds of rubble until they were excavated by archaeologists from about the middle of the 19th century. In contrast with Egypt, the traveller in Mesopotamia will *see* little to convey anything of the realities of these bygone civilisations, which, with relatively few exceptions, have had little influence on the main stream of art.

The Sumerians: City-states.

The Sumerians were not only the first, but the most fundamental influence in Mesopotamia. They were first in time; they set the patterns of the future; and they were the most creative. They invented the art of writing (cuneiform—the earliest form of the script was found at Erech of the Bible in 1928–31). Their conglomeration of city-states produced accomplished potters, sculptors, and metal-workers even before 3000 B.C., but the first great period of art begins with the ascendancy of the city-state of Ur under its ruler Sargon about 2800 B.C., about the time of the building of the Great Pyramid. After coming under the subjection of other city-states for a time, Ur rose again under its king Ur-nammu about 2210 B.C.

Neither Ur nor any of the other cities exist today, but their general plan is known from excavations. Each was surrounded by a high wall with great gateways within which lay the dwelling-houses with their flat roofs. At a higher level an oval wall enclosed the temple precincts, and a third wall the main courtyard of the temple with the rectangular sanctuary of the god on a raised platform at one end. The larger cities were dominated by a tower or ziggurat, pyramidal in shape and rising in three to seven stages with terraces in between to a small shrine at the top reached by flights of steps or ramps. The terraces were often planted with trees or gardens, and this may have given rise to legends of the Tower of Babel or the Hanging Gardens. Probably each level was decorated with brightly coloured glazed bricks to relieve the monotony of the underlying baked clay bricks cemented together with bitumen. For the same reason private and public buildings were decorated with patterns of shells, lapis lazuli, or mosaics.

First Use of Arch Construction.

At all times architects have been faced with the problem of roofing-in their buildings, and in the course of time two main methods evolved: the flat roof laid on beams supported by walls or columns, and the arch or vault. The former method was used by the Egyptians and Greeks, who never got beyond the column and lintel architecture based on the tree-trunks and beams of an earlier stage. This fairly obvious technique was independently discovered in many widely separated parts of the world and can lay no claim to being unique in any one area. The true arch, however, has a very different and almost fantastic history, for it originated in the single area of Mesopotamia and thence spread to the Etruscans, the Romans, and, by way of Romanesque architecture, to the rest of southern Europe. In northern Europe the rounded arch became the pointed one of 12th-century Gothic which, finally

reaching Italy, confronted its romanesque predecessors with the great cathedral of Milan. From Rome the arch spread east to the Byzantine empire, where it was copied by the Arabs, who carried it to Spain in the form known as Moorish, and, together with their religion, brought it to India, where it is seen in the Taj Mahal. Spaniards brought the arch to Mexico, where it was later used by converted Indians in building their mission churches as far north as California. Yet the whole of this development began in a small part of northern Mesopotamia nearly six thousand years ago.

The true arch is built of wedge-shaped blocks and these are so fitted together that each plays its part in supporting the whole although no single block is self-supporting. The last block or keystone locks the structure together. In this respect it is totally different from the false or corbelled arch in which layers of flat stones laid horizontally overlap each other successively until they approach the centre when the remaining space is roofed over by a large flat stone and the sides are buttressed with masses of heavy masonry to prevent collapse. The corbelled arch, vault, and dome were independently discovered in many areas from the Mycenaean tombs of Greece to Ireland and Mexico. Although originating in Mesopotamia, the true arch was never used in large-scale architecture. Rather it was employed in tombs (as in the royal tombs at Ur), or for drains and gateways, and it was left to the Romans to make it a major feature of their architecture.

Sumerian Sculpture.

Since wood and stone were difficult to obtain, their use was reserved by the Sumerians for luxury or essential articles—stone for sculpture and wood for toilet implements, sledges and the wheeled carts they were the first to use. There exists some excellent sculpture which is perhaps freer and more vital than most Egyptian work, but the Sumerians, and those who followed them, shared with the Egyptians an indifference to the beauty of the nude figure. That this was not due to lack of skill is evident from the exquisite manner in which head, hands, and feet were modelled. Two magnificent heads dating from the 3rd dynasty of Ur, which can be seen in the Louvre, are masterpieces of the sculptor's art, as is the famous head of Gudea, Governor of Lagash. Naturalism appears in the treatment of animal figures in reliefs, but the general trend was towards stylised designs. Stone was also used in the making of cylindrical seals engraved with writing for impressing on soft clay. These were often highly decorative and carved with designs based on religious subjects. Unlike the Egyptians, who wrote in ink on paper made from papyrus reeds, the Sumerians cut their wedge-shaped cuneiform letters into clay tablets.

Decorative Art.

The Sumerians were expert workers in gold, silver, and semi-precious stones for ornamental purposes; copper and bronze for weapons; and in the inlay patterns found on wooden boxes, lyres and harps. They made use of the potter's wheel to fashion vessels of clay or made bowls by hollowing-out stone with their drills. Many such objects were found in the royal tombs excavated by Sir Leonard Woolley in 1927. Here the royal bodies lay buried in stone chambers at the foot of deep pits, and in the surrounding area lay the sacrificed bodies of men and women of the court, soldiers, musicians, and even oxen with their carts, grooms, and riders. All were accompanied by the objects they had known in life: gold crowns and helmets, golden drinking-cups, gold daggers, musical instruments inlaid in gold and mosaic, silver head-bands, bronze weapons, jewellery, and gorgeous robes. These, like the Egyptian finds, have been criticised as showing more concern with luxury than good taste, but at any rate they demonstrate the skill of the Sumerian craftsmen of 2700 B.C.

The Babylonians: Temples and Palaces.

The two great periods of Babylonian rule were separated by a thousand years of Assyrian dominance; the first was the period of Hammurabi (*c.* 2100 B.C.) and his successors, the second the brief glory of Nebuchadnezzar II (*c.* 605 B.C.) which lasted only seventy years. In its architecture the Babylonia of Hammurabi's time did not differ greatly from that of Ur during its golden age except in its increasing tendency towards the massive and ornate. One of the largest temple ziggurats was built at Birs-Nimroud with a tower 272 feet square at the base and 160 feet high; originally it had seven tiers each dedicated to one of the seven planets and was decorated with coloured glazed tiles. On the whole, tombs and temples were of lesser significance in Mesopotamia than in Egypt and palaces played a correspondingly greater part, since the cult of the dead was never developed to any extent and secular power was. As mere structures the palaces must have been poor things, squat and angular like children's block buildings, and only their elaborate ornamentation gave them any aesthetic interest. In plan they differed from the houses of the well-to-do mainly in their size, their great surrounding walls, and their many inner courtyards in a maze of chambers and passages. These chambers were lined with decorated glazed tiles and paintings in which animal and repetitive floral designs are common. At Mari, in northern Babylonia, some remarkable wall paintings depicting a royal investiture have been found. Coloured in dark red, blue, and black, they are vivid and lifelike, recalling similar work in Egypt and Crete rather than Mesopotamia.

Assyrian Art.

A typical form in large-scale Assyrian architecture was the great gateway flanked by huge winged bulls or lions with human heads. These were first unearthed by the Frenchman Paul Botta at Khorsobad in 1843. Botta also discovered the palace chambers with walls carved in low relief on alabaster slabs depicting the brutalities so general in Assyrian art: besieged towns, burning buildings, prisoners being flayed and crucified, and everywhere squat, broad-shouldered, and bearded warriors in their chariots. Many of these reliefs were shipped to Paris, where they are still to be seen in the Louvre. A few years later, the English Layard discovered and excavated the site of Nineveh, where he too found reliefs and winged monsters, some more than 15 feet high. These, too, were removed and now clutter up the galleries of the British Museum, where they were a great attraction in Victorian times. The reliefs on the lower part of the walls were originally painted whilst the upper part was decorated with glazed tiles depicting similar scenes. Roofs were ornamented with painted geometrical designs. Grandiose as these works are, it is doubtful whether later Mesopotamian art ever equalled that of the Sumerians, although an exception may be made of the reliefs depicting a lion-hunt found in the palace of Ashur-bani-pal (668–626 B.C.), the last great Assyrian king. This is perhaps one of the finest series of sculptures prior to the Greeks.

The minor arts of Babylonia and Assyria follow in general Sumerian prototypes, but the cylinder-seals in reddish-black iron ore of the 1st Babylonian dynasty and the seals of precious stone made by the Assyrians are unique, as is some of the Assyrian pottery. Possibly the greatest achievement of the Assyrians, however, was their preservation in the royal libraries of the literature of earlier periods. Most of this originated with the Sumerians, was absorbed or imitated by the Babylonians, and copied down from Babylonian texts by the Assyrians.

Literature.

The most typical literary form was the epic poem, of which the two best-known examples are the Epic of Creation and the Epic of Gilgamesh. The latter includes an account of the Deluge which was later borrowed by the Hebrews and

finds a place in Genesis. It may be said to have set the pattern for all future epic poems—that is to say, it recounts the wanderings and adventures of the hero and his eventual success. Epics are as unknown in Egyptian literature as the love-poems popular in Egypt were unknown in Mesopotamia. Penitential hymns probably date from the period of the Semitic invasions, and to the same time belongs the "wisdom literature" which, as in Egypt, gives somewhat platitudinous instructions regarding right conduct. Immense numbers of letters dealing with administrative and business matters and inscribed on clay tablets have been unearthed, but most Mesopotamian literature is religious and primarily of historical interest.

AEGEAN ART.

Minoan Civilisation.

The Minoans of Crete came to the island about three or four thousand years B.C., possibly from Asia Minor. They were a stone age people living in caves and huts. During the Early Minoan Period (*c.* 3000–2000 B.C.), bronze came into use and towns were built but the arts remained at a primitive level and palaces did not yet exist. The Middle Minoan Period saw the unification of the island under a line of kings ruling from their capital at Knossos and the rise of a great civilisation which came to an abrupt end with the destruction of Knossos in 1400 B.C.

The culture of Crete was, by any standards, remarkable. Here was a people who were the first Europeans to be able to write, yet produced no literature but tradesmen's inventories; a people who built great palaces of stone such as those of Knossos and Phaestos with their many storeys, their drainage-systems, and even flushing water-closets; who laid fine roads and erected attractive houses, yet were almost forgotten to history except in Greek legend until their civilisation, the first to be based on naval power, was unearthed by Sir Arthur Evans from 1899 onwards.

The Minoans, in spite of their apparently theocratic form of government, were the first civilised people in history who were not overwhelmed by the power of a monolithic state. Their frescoes on walls, their painted pottery, and their metal-work were ornamented with subjects far removed from the prestige motifs of Egypt and Mesopotamia, or the Egyptian obsession with death. Pottery was often decorated with such sea-symbols as the dolphin, sea-urchin, or octopus, and in the beautiful egg-shell thin Kamares ware there is a delicacy previously unknown. The great frescoes in the columned halls and passages of the palace of Knossos depicted no scenes of conquest, of gods, or an after-life, but in colours of light red, crimson, bright yellow, and turquoise blue, green, and terracotta showed blue skies, birds in flight, butterflies, apes picking flowers, and processions of young men in gay kilts wearing floral crowns. The women wore crinoline-type skirts, puffed sleeves, and left their breasts exposed. A motif which frequently appears is the bull, for this was the island of king Minos and the minotaur, princess Ariadne and her lover Theseus; whatever truth may lie behind the myth there can be no doubt that ritual bull-fighting pictured in the frescoes played a large part in Minoan culture. In the last two centuries of Minoan rule the frescoes and art in general became more grandiose; the pottery lost its bright colours and delicacy, which were replaced by sombre reds and browns on larger and clumsier vessels, and the wall-paintings depicted processions of people bringing offerings to the king. The Cretans also produced exquisite miniature sculpture, and their craftsmen were skilled in engraving precious stones and making jewellery.

The arts in Crete were undoubtedly influenced by those of Egypt, but it seems likely that this influence was greater in pre-dynastic times than it was later. The Cretans' skill in bronze-working and the making of faience ware may have come from the Delta area about the time of Menes. In its turn the Minoan culture was to influence Greece, where the peoples of Mycenean times made use of the Minoan script to write their own language. However it is generally agreed that Crete produced no masterpiece of art, and if one asks why, the answer must be that its way of life was too easy and conflict-free and that consequently its art suffers from a rather facile prettiness unmotivated by the powerful emotions which—whether we admire them or not—motivated the Egyptian or Mesopotamian artist. Nearly all great art has been produced by men with a burning belief in *something*, and this sort of fire the Minoans seem to have lacked. What they produced was elegant and pleasing decoration, and, it would appear, a people leading a free and satisfying life.

GREEK ART.

Contrary to earlier theories the Greeks have been the inhabitants of Greece since about 1900 B.C., so we can no longer apply the word "Greek" to the classical period (*c.* 600–300 B.C.) alone. The Mycenaeans coming from the north were the earliest Greek-speaking people; they learned to some extent the crafts of the Cretans, whom they later displaced from their control over the Aegean, and were themselves conquered by a further influx of Greek-speaking invaders about 1100 B.C. The latter were the forebears of the classical Greeks, who, after a "Dark Age" following the collapse of Mycenaean power, created one of the greatest civilisations the world has known. Yet this occurred at a time when the great nations of the ancient world were dying and the threat of the surrounding barbarian hordes was steadily increasing.

What distinguished the Greeks from Other Nations?

Like most peoples, the Greeks had gods, but they did not take them too seriously, for they were essentially sceptical in their outlook. Like the Egyptians and the peoples of Mesopotamia they were interested in astronomy, anatomy, mathematics, and geography, but their interest arose from the desire to know rather than from priestly or mercantile considerations. Explanation was sought in the natural order rather than the supernatural, and they were therefore the first scientists. Modern cosmology, modern atomic theory, and the theory of biological evolution, all stem from Greece. European philosophy begins with Plato and Aristotle and from the 16th century onwards Greek drama, poetry, and sculpture have been the main foundation of these arts in western Europe. Although little remains to us of the total heritage of Greek art, we know from what does remain that the Greeks produced some of the greatest architecture and sculpture the world has known and that their literature is beyond doubt one of the finest. Thucydides is still esteemed as an historian, and no prose other than the Bible can equal that of Plato; Homer wrote the two greatest epic poems, and Pindar some of the greatest odes. Of the four greatest writers of tragedies who ever lived, three—Aeschylus, Sophocles, and Euripides—were Greek. This achievement was the work of a land which never became unified, a land of small city-states, but primarily it was the work of one of these: the Athens of Pericles. Of course this great outburst of the human spirit did not arise without cause, for as the Greeks themselves were accustomed to say: "nothing arises out of nothing". They took the skills and knowledge of the older empires and, ridding them of their supernatural accretions, made them into something new and wholly human. Even their gods had human frailties.

Mycenaean Civilisation.

The Mycenaeans were a bronze age people who had acquired the skills of working in bronze along with the use of the potter's wheel from the Minoans, who had also taught them the art of writing in linear script. Their crafts and arts

were highly developed. From about 1400 to 1100, when it was sacked and burnt Mycenae on the mainland was the centre of civilisation of the Aegean world. It is this civilisation that Homer describes in the two great epic poems, the *Iliad* and the *Odyssey*, created by him in the 8th century B.C. at the end of the "Dark Age" which followed the collapse of Mycenaean power.

The Early Period: Homer and Hesiod.

The *Iliad* and the *Odyssey*, the former dealing with the siege of Troy, the latter with the adventures which befell the hero Odysseus during his return home, have been translated many times, but the translations in English from Chapman in Elizabethan times to Pope in the 18th century, and Butcher and Lang in the early 20th are apt to be "dated." For this reason the modern reader is safer with a translation such as that of Dr. E. V. Rieu which, if its literal rendering misses some of the poetry, at least leaves us in no doubt as to what Homer really said. Hesiod (750–700 B.C.), also lived during the "Dark Age," but unlike Homer his existence as a real individual has never been called in doubt. His poem *Work and Days* tells of the farmer's hardships, preaches the gospel of hard work, and rails against landlords and princes. Hesiod lived in Boetia, one of the poorest parts of Greece: "a sorry place near Helicon, bad in winter, hard in summer, never good."

Sappho, Anacreon, and Pindar.

The period between 600 and 500 B.C. was a time of development in Greek art when buildings of mud-brick and wood were being replaced by limestone and marble, and music, literature, and sculpture were cultivated. It was not yet the great age of art, but it was the beginning. Much of the art of this period came, not from the mainland, but from the Ionian Greeks of Asia Minor or the islands of the Aegean. The short lyric poem was replacing the epic and is typified by the works of the poetess Sappho of Lesbos (611–592 B.C.), of whose love-poems only a few fragments remain, Anacreon of Theos (560–475 B.C.), whose odes often take the form of drinking-songs, and later Pindar (522–443 B.C.), one of the greatest—and least-known—poets who ever lived. Pindar lived at a time when the aristocratic way of life to which he had been born was coming to an end and the first democracy in the world was coming to birth in Athens. Most of his odes celebrate a noble victor in the great athletic contests, although he is more concerned with the achievement as a spiritual than a physical feat.

When, during the early part of this period stone begins to replace wood in architecture and sculpture, the stone is treated in a manner similar to that used in working the original material. As in Egypt, the stone columns of temples are topped with sculptured foliage indicating their historical development from trees, and stone statues show a stiffness of treatment from which we may presume a similar origin. The influence of Egypt is seen in the statues of youths known as Kouroi or Apollos which date from about 550 B.C. and show the erect figure with arms by the sides and left leg advanced typical of formal Egyptian sculpture. The first large statues in marble were the Hera of Samos and another on the island of Delos; both of these possessed primitive characteristics even to their draperies which were arranged in perpendicular folds.

The Age of Pericles.

The public career of Pericles lasted from 463 to 431 B.C., and encompassed the greatest period of Greek culture. The 5th century began with the battles of Marathon and Salamis in which the Persians were defeated by a combination of Athenians and Spartans. It ended with the futile Peloponnesian wars between Athens and Sparta which ultimately brought about the end of a great civilisation. Much of the history of this time is known through the works of the historians Thucydides (460–399 B.C.) and Xenophon (444–359 B.C.). Thucydides wrote an account of the Peloponnesian war containing the famous funeral oration of Pericles which summarises Athenian ideals as Lincoln's Gettysburg address summarised American. Whether Pericles actually used the words attributed to him or not, it remains one of the greatest speeches of history. Thucydides was the first scientific historian in that he sought to discover the processes going on behind events; in this respect he differs from Herodotus (484–424 B.C.), the "father of history," whose fascinating anecdotes of his travels amongst the Egyptians, the Persians, and other peoples, even if on the whole truthful, remain essentially travellers' tales. Xenophon, a pupil of Socrates and the general in charge of what proved to be a retreat (when he came to the aid of Cyrus the Younger who wished to drive his half-brother from the throne of Persia) wrote an account of the action in his *Anabasis*, another well-known historical work.

Literature and Philosophy: Plato and Aristotle.

Writing was first used to any extent in the political and commercial circles of the 7th century B.C., but oral transmission of learning was still the rule. Those who put their learning into literate form used poetry as their vehicle even when writing on philosophy as did the 6th- and early 5th-century philosophers Anaximander and Empedocles, both of whom wrote in verse. Cadmus of Miletus (c. 547 B.C.) was the author of the first Greek work in prose, but from the time of Hecataeus (500–476 B.C.) onwards writing in prose became fully established, although the oral tradition was still strong, as one may see in the importance attached by the Greeks to the art of rhetoric in the oratory of Demosthenes (385–322 B.C.) and the dialectic method of teaching used by Socrates (469–399 B.C.). Plato (427–347 B.C.), a pupil of Socrates and perhaps the finest writer of Greek prose, came of an aristocratic Athenian family. After the death of Socrates he travelled for some years in Italy and Egypt, but later returned to Athens where he founded the Academy which was in effect the first European university. He expounded his philosophy in the Socratic Dialogues which purport to record conversations between Socrates (who himself wrote nothing) and a number of young Athenian aristocrats. This is one of the great books of world literature; the dialogue known as the *Phaedo* gives an account of the execution by poison of Socrates, and *The Symposium*, which is a discussion on the nature of Love, brings the reader so close to the scene that he can almost hear the conversation of the guests attending the feast. The *Republic*, in which Plato deals with the structure of the ideal state, has led in modern times to his being stigmatised as a totalitarian, a Communist, or a Fascist—an absurd attempt to transport contemporary political concepts into the past. Plato's pupil Aristotle (384–322 B.C.) was the greatest of Greek philosophers and his philosophy, modified by St. Thomas Aquinas and known as Thomism, is the official doctrine of the Roman Catholic Church today. Aristotle wrote on many subjects: biology, ethics, logic, politics, and rhetoric, but possibly his best-known works are the *Ethics*, the *Politics*, and the *Poetics*. He was tutor to Alexander the Great and founded the Lyceum at Athens.

The Drama.

Towards the end of the 6th century with the rise of Athens to intellectual supremacy the theatre developed into one of the greatest of the arts. The word "drama" is derived from a Greek word meaning to do or to act and drama was subdivided into tragedy and comedy, the former signifying a "goat-song," the latter a village revel. The origins of the theatre are lost in the past, but it seems clear that it arose from primitive rites connected with fertility and harvest-time; "goat-song" probably refers to songs sung in honour of Dionysus, the god of wine, by men clad in goatskins, and the revels from which comedy arose were simply those somewhat in-

decorous festivities attending a harvesting. Dionysus or Bacchus was originally a minor god, but at a later stage he became the tragic figure who dies and comes to life again, celebrated with wine which symbolically represents his blood shed that the earth might be fruitful. In the earliest plays a single actor exchanged dialogue with the chorus and the performance probably took place in a natural amphitheatre so that the audience would have a clear view. Subsequently the space around the altar of the god where the chorus sang and danced developed into the "orchestra," the forerunner of the stage. An erection behind the altar, the "skene," was at first a dressing-room for the actor but, as the drama became more elaborate, it became a solid structure with a façade of columns and three doorways. According to Aristotle the first painted scenery was introduced by Sophocles. The chorus of twelve or fourteen performers, all male (as were the two to three actors) was a relic of the early religious rites; it had the function of providing a poetic commentary on the action and characters of the play becoming progressively less important from the time of Euripides, who wished to focus attention on the actors as motivated by human passions rather than by the supernatural. The actors themselves used tragic or comic masks and increased their height by the use of the "colthurnus," a thick-soled sandal.

Prizes were offered each year for the best plays and early in the 5th century stringent rules were laid down for the competitors. Each had to submit a series of four plays: three tragedies dealing with the same or different subjects and a play treating in a satirical way some incident in the tragedies. The permitted numbers of actors and members of the chorus were determined, as was the length of the play, and violent action on the stage was not allowed. The ritualistic approach and regulations led to a stylised and static performance which more closely resembled a performance of the *Messiah* than a play in the modern sense.

Tragedy: Aeschylus, Sophocles, and Euripides. During this century three men wrote tragedies which raised the Greek drama to its highest level: these were Aeschylus (525–456 B.C.) the father of tragic drama, Sophocles (495–406 B.C.), and Euripides (480–406 B.C.). There were, of course, many other writers of tragedy, since competitions went on for some centuries, but of all these nothing remains save one by an unknown author. Although Aeschylus is reputed to have written seventy plays, Sophocles more than a hundred, and Euripides seventy-five, all we have left are seven by each of the first two writers and seventeen by the third.

The plays took for their subject the events and characters of ancient myths which were regarded, as were the works of Homer, as semi-sacred. But the Greek dramatists differed from others not only in their choice of subject-matter and their staging of a play but also, as Professor Kitto has shown, in their conception of what a play is *about*. To the Greeks a play was not, as it was with Shakespeare and most other dramatists, a slice of life with a main plot and other subsidiary ones which really have little to do with the story; it was an attempt to express a single thesis with clarity, force, and a concentrated attention that had no time for side-issues. The framework of the play is not a story but a conception, and so the *Agamemnon* of Aeschylus, for all the complexity of its plot, deals with one matter only: the thesis that retributive justice inflicted in revenge leads to chaos. Aeschylus' plays include *Agamemnon*, *Eumenides*, *Orestia* (a trilogy), and *The Persians*; Sophocles wrote *Ajax*, *Oedipus Rex*, and *Antigone*; Euripides, *Orestes*, *Medea*, *Hippolytus* and *Electra*.

Comedy: Aristophanes. Comedy, at any rate in its more sophisticated forms, developed later than tragedy. Originating possibly in Sicily with Epicharmus of Syracuse, it subsequently became essentially an Athenian art. Historically, comedy has three phases: the "Old Comedy" represented by nine of the eleven surviving plays of Aristophanes, (*c*. 444–385 B.C.) "Middle Comedy" represented by the other two and belonging to the first two-thirds of the 4th century, and "New Comedy," which survived into the 3rd century in the works of Menander, (342–*c*. 291 B.C.). The development moves from old forms with coarse humour and a satirical treatment of topical issues, through the middle more sophisticated stage reminiscent of Gilbert and Sullivan's comic operas, to Menander's essentially romantic comedies with the type of plot associated with such plays as Shakespeare's *Comedy of Errors*. Shakespeare borrowed this plot from Plautus who, with another Roman dramatist Terence, had adapted many of Menander's plays now known only from fragments. (The papyrus of a complete play of this writer was discovered in 1957.) Aristophanes main works are the *Clouds*, satirising Socrates; the *Frogs*, tragic poets; *Lysistrata*, feminism; the *Birds*, city life; and the *Wasps*, the Athenians' love of law-suits.

Painting and Vase Painting.

Hardly any Greek painting up to the time of Alexander the Great is known to us except the decorations on vases. The painters of the age of Pericles and after, although in their time often more highly praised than the sculptors, now exist only in their names: Polygnotus, Philoxenus, Zeuxis, and Appeles. But some idea of the character of Greek wall-paintings can be obtained from Roman copies in mosaic and fresco, notably at Naples and Pompeii. Painting in Greece reached its zenith during the 4th and 3rd centuries B.C. The mosaic *Battle of Issus* in the Naples Museum, after a picture by Philoxenus, representing the great battle between Alexander and Darius, is a copy of a 4th-century fresco from Pompeii. *The Adobrandini Wedding* of a much later date at the beginning of the Christian era influenced such diverse artists as the 17th-century Frenchman Poussin and the present-day Picasso, both of whom were impressed by its statuesque figures and geometrical style. A painting (believed to be a copy) of a woman playing a lyre found in a villa near Pompeii shows an awareness of perspective not found in Italian painting until the 12th century.

The Greeks were amongst the great potters of the world, and the word "ceramics" is derived from the area near Athens where potter's clay was obtained. The origins of the craft, as the Greeks learned it, date back to Crete and the Mycenaeans, where excellent work was produced, at first with geometrical designs and later with the sea-symbols mentioned already. The Greeks of the 9th and 8th centuries B.C. returned once more to rather monotonous geometric designs of single or concentric circles with interlacing lines arranged in bands. In some cases "match-stick" figures (which later tended to fill out) were depicted in funeral processions or naval battles arranged between the bands. The seventh century saw the introduction of motifs from the East: lions, bulls, and winged monsters, sometimes with human figures, painted in brown with touches of red, white, and yellow. At this time Corinth produced the best pottery, but in the following centuries Athens was supreme. From 600 to 500 B.C. the Black-figure style was popular with black and mostly human figures on the natural earthen-red ground; these were archaic in tradition but, especially in the work of the painter Exekias, show a wonderful sense of pattern. From 500 B.C. or thereabouts the technique was reversed and an immense number of vases were produced with red figures on a black background. Whereas in the older style, markings on the figures had been made by scraping the paint to reveal the red pottery beneath, these were now done in black paint on the red figure. Many of the potters signed their works and some added inscriptions in praise of a good-looking boy apprentice. "Young Skouras is a handsome lad" or "That boy Aristophanes is the playmate of Zeus" (since, of course, they did not share present-day views on homosexuality). Throughout all these developments one can see how the Greeks, although they retained the Egyptian genius for design and clarity, progressively turned away from tradition and

began to look at the world for themselves without relying on any formula. Figures become more human and rigid postures disappear. But one of the greatest moments in the history of art was when, sometime before 500 B.C., a Greek artist discovered foreshortening—he could depict the foot, for example, from the front, or an arm pointed directly at the viewer. The old art of profile or full-face was dead and the era of modern art had begun with all its limitless possibilities of depicting the human figure. However, Greek vase painting was on the decline from the beginning of the 4th century and by its end was dead.

Architecture.

Almost the whole of the Greek genius in architecture was expended on temples which are all basically similar in design. If the Greeks knew of the arch, vault, and dome—as they almost certainly did—they ignored them in favour of the ancient column and lintel not because they were afraid to experiment but because they had found something which in its very simplicity is flawless and perfect. Possibly this is why the Greek temple is the one universal style in the history of architecture, from the time of the Romans, who spoiled its effect with inappropriate domes and ornate columns, to Louis IV, who erected pseudo-classic buildings all over Paris. An immense number of imitations are found both in Europe and the United States (the latter much influenced by Thomas Jefferson who besides being President was also an architect with classical leanings). That the classical style is ideal rather than individual and personal, intellectual rather than emotional may in part account for its subsequent appeal to the peoples of so many and varied nations and times.

Temple Design. Fundamentally, the temple is a rectangle with a low-pitched gabled roof resting on the side walls. The roofs of Egyptian and Mesopotamian buildings, as we have seen, were flat, and it seems likely that the slightly sloping roof was an innovation brought by the Greeks from the north. The skeleton of the temple then was a "typical" house such as a child might draw or build with blocks. In its earliest stage the only material used was wood, but later the walls were built of limestone and wooden columns in front helped to support the roof of a porch. Finally, the whole structure was of marble with front and back porticos and a colonnade on either side. Within was a front chamber or cella with a statue of the god or goddess to whom the temple was dedicated and a back room holding the treasures sacred to the god. All ceremonials were carried on outside the building. In the course of its development temple architecture branched into three styles, the well-known orders, which, although nominally concerned only with the height and proportions of the columns and the ornamentations of their capitals, in fact influenced the details of every part of the whole structure. The Doric column, as seen in the Parthenon, is heavy and solid with a simple cushion-like capital, but in later buildings on the Acropolis, notably the Erechtheum, the Ionic style was used. In this style the columns are slender with a double scroll or volutes at the top; the total impression is one of grace and ease in contrast with the strong, reliable-looking Doric column. The Ionic style belongs to the generation after Phidias who directed the building of the Parthenon. Still later, the Corinthian order, invented in the early 4th century B.C. and named after the city of Corinth, was popular in the wealthy cities of Egypt and Asia Minor under the rule of Alexander the Great. This order is similar to the Ionic, but the capitals of the columns are much more ornate and decorated with carved acanthus leaves. The rich ornamentation extends throughout the whole building, as, for example, in the temple of Zeus in Athens, one of the best in this style.

The Acropolis at Athens: the Parthenon.

The Acropolis, a hill *c.* 250 feet high with a flat oval top 500 feet wide and 1,150 feet long, was the ancient Athenian citadel, adorned with a number of buildings: the Parthenon, which is the largest; the Propylaea, a gateway with a broad flight of marble steps; the Erechtheum, with one part dedicated to Athena in Ionic style and another part sacred to the legendary king Erechtheus and famous for its Porch of the Maidens. Beside the Propylaea was a colossal statue of Athena standing in the open and visible from far and wide; beside the Parthenon stood the Odeum, a place for musical festivals. On the south slope of the hill lay the great theatre of Dionysus, and the Theseum, a Doric temple. Built between 447 and 432 B.C., the Parthenon itself was 229 feet long, 102 feet wide, and 65 feet high. It was made wholly of marble without mortar (even the roof was of hand-carved marble tiles), and the columns were composed of separate drums precisely fitting one on top of the other.

The perfection of the whole is almost incredible: for not only did all the parts join in the whole with mathematical accuracy, but allowance was made for optical illusions. Thus the floor or stylobate was slightly rounded towards the centre to give the impression of a level surface when seen from a short distance, the columns bulged slightly in the middle and leaned slightly towards the building to give an impression of strength, and the metopes (see later) were actually oblongs so that they might appear as squares when viewed from the ground. Resting on the columns is the entablature which supports the roof and includes a lower undecorated part, the architrave, above which lies the frieze in which sculptured panels or metopes alternate with three-grooved triglyphs which represent what was once the ends of the rafters in the wooden temple. The main frieze running round the upper part of the walls represented the annual procession with warriors on horseback or in chariots, peasants, young girls carrying olive boughs, and old men carrying jars, all moving to the shrine to do reverence to Athena. It was 524 feet long and just over 3 feet high. The pediments or triangular areas at the gable ends of the temple were decorated with a remarkable series of statues in full relief—that is, completely separated from the background. The shape of the pediment necessitated that the central standing figures should be twice as large as life, while those towards the angles at the base had to be arranged in kneeling or bending postures. All this was done with consummate skill.

Today, however, all that remains in position are a few heads on the pediments and parts of the frieze; the rest of the frieze is divided between the museum at Athens and the British Museum and the remaining pediment statues are in the British Museum whence they were taken by Lord Elgin at the beginning of the 19th century. Although the great statue (now long since disappeared) of Athena which occupied the cella was certainly by the great sculptor Phidias (who also directed the construction of the Parthenon), it is unlikely that he himself created the Elgin Marbles. Statues and buildings were painted, the buildings often in strongly contrasting colours such as red and blue in the case of the metopes and triglyphs of the Parthenon. The building, erected only a few years after the destruction of its predecessor by the Persians in 480 B.C., was reduced to its present condition when, whilst being used as a powder-magazine by the Turks, it was blown up by a Venetian shell in 1687.

Sculpture: Classical Period.

Most people brought up in the Western Hemisphere are so familiar with the general appearance of Greek statuary that, whatever other doubts they may have, they will almost certainly be prepared to assert (*a*) that Greek sculpture attained a standard of perfection by which all later works must inevitably be judged, and (*b*) that, from what one sees in even quite small provincial museums or galleries, it is obvious that a large number of Greek sculptures have come down to us. Neither of these statements is true. The Greek standard of beauty is one, but by no means the only, standard by which a work of art may be judged, and many critics have felt that it has sometimes proved more of a hindrance than a help in assessing

the works of other cultures. The second assumption—that much remains of the Greek heritage—is also incorrect; for, in point of fact, hardly anything remains of original 5th-century sculpture. What we see in the vast majority of cases is a plaster cast, often an inferior one, made from a late Alexandrian or Roman copy of an original, and even this is more likely to represent a work of the 3rd or 4th century B.C. than the 5th. The famous *Venus de Milo*, for example, now at the Louvre in Paris, is 3rd or 2nd century, and the *Hermes* of Praxiteles (born *c.* 385 B.C.) is possibly the only existing statue which can be assigned with any degree of certainty to an individual artist.

We have seen that, from the end of the 7th century B.C., the Greeks who had hitherto worked in wood and bronze turned to marble, but it was two centuries before they were able to cast aside the limitations imposed by the past. To the first part of the 5th century belong such works as the Apollo and Zeus on the Temple of Zeus at Olympia (*c.* 460 B.C.), and the bronze charioteer of Delphi (*c.* 470 B.C.); these are now highly thought of although severe and lacking in detail compared with later works. But the most famed three sculptors of the 5th century were Polyclitus, Phidias, and Myron, none of whose works in the original remains. Polyclitus, famous for his bronze statues of athletes and his concern with mathematical proportions, is best known for his *Doryphorus* (man with spear), a Roman copy of which (in marble) is in Naples: Myron, the sculptor of the *Discobolus* (discus-thrower) and the *Athena and Marsyas*, worked exclusively in bronze; and Phidias, although responsible for overseeing the work on the Parthenon, is not now believed to have executed any statues now extant. The forty-foot high gold and ivory statue in the Sanctuary of the Parthenon representing Athena in a seated posture is known only from crude representations on coins. In the 4th century the three great sculptors were Scopas, none of whose work remains; Lysippus, sculptor to Alexander the Great; and Praxiteles, the greatest of all, whose original *Hermes* at Olympia is mentioned above. Copies of his other works survive, notably the *Aphrodite* (or Venus) made by the Romans. Finally, there are two original masterpieces by unknown artists—the *Winged Victory of Samothrace* (*c.* 300 B.C.), and the *Venus de Milo*, both in the Louvre. During this time the sculptor's ideals were beginning to change, and the reverently-treated and noble figures of Zeus, Apollo, and Athena were gradually replaced by the more earthly figures amongst the gods, Hermes, Aphrodite, and Dionysus. The treatment of the subject was more sensuous, the figures increasingly effeminate, and the draperies of the female figures moved ever further down until they no longer existed. Although this art has been compared unfavourably with that of the 5th century, the deterioration, if any, must have been slight.

As mentioned above, the Greeks may unwittingly have done us a disservice when later generations came to accept their approach not just as one out of many but as the sole criterion of excellence. For the Greek tendency was to equate two entirely distinct concepts of the meaning of beauty: the natural beauty of the object confronting the artist and the aesthetic quality of his work. In effect, this implies that a beautiful work of art must have as its subject things which are themselves beautiful—a dangerous fallacy if universally applied. Rembrandt showed once and for all that fat and ugly old ladies can be just as " beautiful " to the artist as slender and lovely young ones, and if a knowledge of classical Greek sculpture is an essential foundation to anyone who wishes to understand art, it cannot be used as an absolute measuring-rod to apply to an artist who has found his inspiration elsewhere.

HELLENISTIC ART.

The Hellenistic period of Greek civilisation began with Alexander the Great (356–323 B.C.) and lasted until his empire passed into the hands of the Romans in 146 B.C. It was a most important time in the history of art, bringing about, as it did, the spread of Greek culture far beyond its original frontiers. Egypt, Asia Minor, Mesopotamia, and Rome absorbed and developed Greek concepts, and through them India and above all Western Europe were influenced. Athens was no longer the cultural centre of the Mediterranean world and was replaced in her supremacy by the great cities of Alexandria in Egypt, Antioch in Syria, and Pergamum in Asia Minor. But if Alexander's empire absorbed Greek concepts it is no less true to say that the West was influenced by the East—by Eastern ideas of government, Eastern religion and philosophy, and Eastern art. There were absolute monarchies in place of city-states, cosmopolitanism in place of the Greek tendency to suppose that all who were not Greeks were barbarians, and a rather despairing attitude in philosophy exemplified by the Stoics, who in effect said " we must grin and bear it " and the Epicureans, who said " get pleasure while you can." This was a secular, pleasure-loving, sensuous, rootless, society without convictions—or with so many contradictory convictions being preached at every street-corner that they really amounted to none—and Hellenistic art was a reflection of its society.

Literature.

In literature, the popular forms were comedy in the style of Menander and pastoral poetry as in the works of Theocritus of Syracuse. Menander wrote for those who enjoyed city life, Theocritus for those who were bored with it, and his highly idealised milkmaids and goatherds could only have been appreciated by those who knew nothing of country life. The epic poem was long dead, except in the works of Alexandrian scholars whose efforts were as technically perfect as they were meaningless to an age devoid of heroic figures. Lyric poetry no longer flourished and tragedy had come to an end, perhaps because tragedy is based on a belief that life, no matter how dreadful it may be, has a meaning. The tragic play is not necessarily based on a religious view of life, but it must be based on *some* view such that the individual characters in the play exemplify a deeper version of the human situation than their own particular manifestation of it. Many great playwrights were, or may have been, sceptics, but even so their plays were based on a framework of belief whether or not they themselves accepted its theological justifications. Euripides' framework was Greek mythology; Shakespeare's, Catholic Europe; Ibsen's, Lutheran Protestantism, although all these men were sceptics writing at a time when the tradition, so far as their own culture was concerned, was dying out. The Hellenistic world had no traditions and amid the vast political and social changes nothing and nobody could be believed; life was luxurious but pointless to the wealthier classes. Menander's comedies and Theocritus' poems were the equivalents of modern musical comedies and thrillers.

Sculpture.

Hellenistic sculpture continued the trends which made their appearance in 4th-century Greece. It was sensual, effeminate, and violently emotional. In place of the idealised forms of classical Greek statues which represented an idea rather than a person or even a god, Hellenistic sculpture depicted individuals, and not always noble or beautiful ones. The best examples of Hellenistic sculpture come from the Pergamene school which was later followed by the school of Rhodes: among the more familiar are the *Dying Gaul*, and *Gaul Slaying his Wife and Himself*, (*c.* 241 B.C.), the *Old Market Woman* (2nd century B.C.), the *Apollo Belvedere* (2nd century B.C.), the *Prize Fighter* (*c.* 50 B.C.), and the *Laocoön*. Most remarkable of all is the enormous frieze on the altar of a temple at Pergamum depicting a battle between gods and giants. The frieze is 400 feet long by 7 feet high, dates from about 160 B.C., and tells its story with tremendous realism. Its brutal violence is far removed from the controlled and serene art of classical Greece, but foreshadows the exuberance and restless excitement of 17th-century baroque art.

Portrait sculpture was another typically Hellenistic form of art and one which, in spite of earlier ventures elsewhere, might almost be said to have been invented in this period. The classical Greeks thought little of portraits, and when they did produce them did so in an idealised style. Just as the statue of an Egyptian pharaoh was primarily a portrait of a pharaoh rather than a particular man, so a bust of Pericles represented a noble man and a bust of Alexander a successful general and ruler. The Hellenistic Greeks produced portraits which recognisably represent this man and no other, not an idea but a personality. Their art was seized upon by the Romans who, as the world knows all too well, worked the portrait statue to death.

Alexandria the Intellectual Centre.

The great Hellenistic cities were geometrically planned and their wealth made possible the building of fine temples, baths, theatres, libraries, and market-places. The Doric style disappeared to be replaced by increasingly graceful and slender Ionic columns or ornate Corinthian ones. The true arch was sometimes used although not fully applied. The common language was a Greek dialect, the *Koinē*, which was used by the Jews for the version of the Old Testament known as the Septuagint, in the writing of the New Testament, and by St. Paul during his missions. Alexandria, the intellectual centre, was famed for its Museum with its library of 700,000 books. Here worked and lived the physicians Erasistratus and Herophilus, the mathematician Euclid, Archimedes, the geographer Pytheas, and many other great men.

Hellenistic society did two main things. It spread Greek culture far and wide, and it extended the boundaries of art beyond the rather limited concepts of classical Greece. From this time onwards the whole of experience was grist to the artist's mill.

ROMAN ART.

From about 1000 B.C. Italy was occupied by bronze age peoples from the north, and a century later by an iron age culture also from beyond the Alps. By 800 B.C. the area west of the Apennines and north of Rome was occupied by the Etruscans, large coastal areas in the south by the Greeks and Rome itself was a mere handful of settlements on the left bank of the Tiber at a ford connecting Latium with Etruria. The early history of Roman power is the history of her conquest of the Etruscans, Gauls, and other peoples in north and central Italy by 295 B.C., and the final expulsion of the Greeks in the south by 270 B.C.

The Etruscans.

The Etruscans appear to have come by sea from Asia Minor and penetrated into Italy by way of the Tiber into the area now known as Tuscany. This happened about 800 B.C. or earlier and by the 6th century B.C. they were at the height of their power, holding most of northern Italy and the west coast as far south as Naples. Rome was ruled by Etruscan princes, the Tarquins, until their expulsion in 509 B.C. Etruria was a land of independent fortress towns joined together in a loose confederacy, and her people were skilled in agriculture, metal-working, and ship-building. This work was carried out by the native peasantry under their Etruscan overlords. Religion, art, and learning were borrowed from Eastern sources, and their religion seems to have been a gloomy affair with worship of the destructive forces of nature, spells, charms, and curses, human sacrifices, and a vivid conception of the after-life which had a hell populated with demons. The popularity of the skeleton as a motif in art reveals their obsession with death, as also do the communal burial chambers under large mounds (accorded to important families). These were decorated with paintings and the bodies lay in clay sarcophagi with realistic likenesses of husband and wife lying together as on a couch upon the lid.

Prior to 600 B.C. Etruscan art was influenced by Asiatic and Egyptian art; there are the bronze vessels, gold-work with its remarkable granular decoration, jewellery of high technical skill, and the characteristic grey-black pottery known as *bucchero*. Then, between 600 and 450 B.C., Greek inspiration was apparent with statues and statuettes of bronze and clay. The clay statue was first moulded and then baked but not glazed; terra-cotta, as it is called, was ordinarily reddish in colour. From the end of this period Etruscan art declined until it merged with Roman art. Though the Etruscans excelled as skilled technicians their art is not highly esteemed. This is true also of their architecture.

An Etruscan temple is a modification of the classical Greek temple. Set always upon a hilltop, standing on a high *podium* or platform, approached from the front by a flight of steps, it had a deep front porch, the roof of which was carried by a double row of widely spaced columns; there was no surrounding colonnade, and the roof projected beyond the line of the side walls, giving it a somewhat top-heavy appearance. The Etruscan knowledge of the arch was passed on to the Romans. Latin culture, the culture of Latia, the district surrounding Rome, owed much to the Etruscans. Roman religion and ceremonials, the earliest temples, the religious calendar, the alphabet, the division of the people into patricians and plebs, (nobles and commoners) all stemmed from Etruria. But after the expulsion of the Tarquins Greek influence was predominant. Some of the Greek gods were introduced, and Greek became the language of the educated classes whilst Latin was for traders and common people.

The Early Romans.

The early history of Rome is legendary and need not be taken too seriously, but from the beginning her culture was derivative, the main sources being Greece and Etruria. The Romans were conservative, methodical, unimaginative, and, as some might say, dull; the foundation of their life was the family, and the obvious aim of their education was to perpetuate unchanged the traditional modes of life. It was a long time before they showed any intellectual or artistic leanings, since they were too preoccupied with conquest to give much time to anything else.

The Latin language may have been used in the early ballads and epics recited at the banquet table, in political oratory, and in the codification of the law, but there was no Latin literature until about the 3rd century B.C., and even then what was produced was mostly translated from the Greek. The early Romans had been tillers of the soil and were suspicious of "culture." In respect of architecture they were no less tardy, since if we take the foundation of Rome as 753 B.C. and pass from this event to the death of Augustus in A.D. 14 (the total period covered by many history books), important architecture only begins to make its appearance about the latter date. Prior to the expulsion of the kings in 509 B.C., Rome was a cluster of primitive huts with a few Etruscan-style temples, and if some more ambitious structures were erected under the Republic, nearly all of these have disappeared. "For all practical purposes," says Martin Briggs, "Roman architecture is confined to the buildings of Imperial Rome, and the first 700 years after the city's traditional foundation seem unimportant." Roman sculpture and painting came from Greek and primarily Hellenistic sources following the sack of Corinth in 146 B.C., although Etruscan influences must have played an earlier part.

Roman Architecture.

Before discussing specifically Roman types of building it is necessary to say something about Roman methods in architecture. The traditional view has been that, having developed the arch borrowed from the Etruscans into a structure which could play a really effective part in building, the Romans perversely proceeded to add to it for

purely decorative purposes the column and lintel forms which they had borrowed from the Greeks. But this, says Lethaby, is precisely the opposite of the truth; for in fact classical Greek styles had long been in use when the arch, vault, and dome were imported under Hellenistic influence. Roman architecture does not represent a native system of arched construction smothered over by a borrowed foreign style, but a development of Hellenistic art away from a more primitive form. When new structures of a type not previously in use were needed the arch was used; but generally speaking the classical style was retained in such buildings as temples and theatres for which it had become traditional. Thus the enormous Pont du Gard at Nîmes in Provence which carries an aqueduct across a valley is an example of the use of the arch on a colossal scale. It was erected in 19 B.C., but the temple known as the Maison Carré also at Nîmes and built in A.D. 14 is in classical style and differs from Greek models only in detail. The former was a new utilitarian structure, the latter a traditional one.

Whilst the Greek ideal had been the harmoniously proportioned building based on the restrained use of energy, the Romans were impressed by the gigantic and wasteful. The 2,500 separate figures on the column of Trajan illustrating his campaign in Dacia, the Colosseum with its 45,000 seats, and the great dome of the Pantheon tell their own story. But the building of huge unwieldy edifices and the roofing-in of large spaces without intermediate supports required a special technique, and this was provided for by the discovery of the use of concrete. Concrete is a combination of sand, gravel, and water mixed with a cementing material, and the Romans used *pozzolana* (volcanic ash) and volcanic stone with lime as the cement. By this means it became possible not only to make immense vaults and domes but also, by using concrete in the construction of walls, to erect a building which was all of one piece and gained in strength from having no weak joints. The heavy roof poses a serious problem for the architect in that its downward and outward thrust has to be taken into consideration if the whole structure is not to collapse. The Byzantine dome stood on four strong piers, the Roman on heavy circular walls, but the Gothic architects developed the flying buttress standing apart from the building itself and pressing inwards and upwards. In contrast to the Greek architects who, relatively speaking, neglected the interior of their buildings, the Roman architect tended towards impressive interiors whilst neglecting the outside. The Roman dome, as in the Pantheon, had no significance externally and its impressiveness is only apparent from the inside. Prior to the time of Augustus the main building materials were sun-dried brick or stone covered inside and out with stucco; afterwards marble was used for important buildings, kiln-dried brick for the humbler or more utilitarian ones.

The almost complete lack of buildings erected prior to the period of Augustus, although due in part to the ravages of time, is for the most part the result of demolitions carried out by a long line of Emperors who wished to replace them by more ambitious structures. The gigantic and costly edifices which took their place were made possible by the spending of the booty from many campaigns; they still make Rome one of the most impressive cities in the world.

Civic Buildings. The passion of the Roman architect for symmetry is nowhere seen more clearly than in the designing of a forum—the enclosed space in the centre of a town which combined the functions of market-place, meeting-place, ceremonial ground, and sports arena. This had as its focal point a temple which often had its back wall in direct contact with one wall of the enclosure, whilst in the centre of the square were colonnades, and round the other sides the *basilica* or public hall, and other public buildings. But the forum was only the central area of an ordered piece of town-planning where two wide streets met at right-angles with other streets of specified width crossing them at regular intervals. Public baths, theatres, and amphitheatres were found even in small towns and water supplies were lavishly arranged—Rome itself was supplied by no less than fourteen aqueducts with a total length of 265 miles, and many provincial towns were better supplied with water in Roman times than they are today. In fact, many Roman aqueducts are still in use as are the Roman roads which, crossing hills and valleys in a straight line, reveal the determination and engineering ability if not always the intelligence of those who built them. Equally elaborate and permanent were the drainage systems and sewers, notably the Cloaca Maxima, the main sewer of Rome. Yet for all this mechanical perfection and efficiency something is lacking in Roman architecture; it is, says Lethaby, the great Philistine style. Roman culture was often but a thin veneer that hardly concealed the natural coarseness and brutality of Roman manners, and as conquest succeeded conquest a great civilisation was gradually choked by its material advantages.

Temples. The Roman temple tended to retain more or less the same form right up to the times of the later Caesars—that is to say, it followed the Etruscan modification of the Greek temple as seen in the Maison Carée at Nîmes. This is on a raised platform or *podium* with a flight of steps at the front as the only means of access (Greek temples were accessible from all sides) and the side columns are half built into the walls. But other forms were in use, and some of the larger temples (*e.g.*, at Baalbek and Palmyra in Syria) have a peristyle of free-standing columns or even, as in the case of the Great Temple of Baalbek, a double peristyle.

The Pantheon.

The supreme achievement of the Romans in the constructional sphere was the Pantheon in Rome, a circular temple, and the only building extant in that city which preserves its original condition. It was erected by the Emperor Hadrian between the years A.D. 120 and 124 in honour of all the gods and is one of the architectural masterpieces of the world. The Pantheon is a rotunda or drum-shaped building 142 feet in diameter with no external decoration but a Greek-style entrance porch. The dome, 141 feet high, is built of bricks laid in horizontal corbelled courses for two-thirds of its height, the remaining third being in *voussoir* or arch fashion and the crown has a round opening for light 27 feet in diameter. The immense weight of this structure necessitated supporting walls 20 feet thick, a system of horizontal and vertical brick arches around the dome to counteract its outward thrust, and rows of deeply recessed panels inside to reduce its weight. Even this was not enough, and the external walls were continued upwards for a considerable height above the base of the dome. This gives the dome, impressive from within, a flat and saucer-like appearance from outside—a lesson which was not lost on Wren when many centuries later he solved the same problem in the case of St. Paul's by building two domes, the inner for its effect from within, the outer solely for its external appearance. Other, but smaller, circular temples are the Temple of Vesta at Rome, another of the same name at nearby Tivoli, and one at Baalbek. There is an octagonal temple at Spalato in Dalmatia.

Buildings for Recreation. The ability to roof in enormous spaces was of prime importance in the building of the great *thermae* or bathing establishments with their vast halls surrounded by smaller rooms for changing, games, and baths of all kinds. One of the largest, that of Diocletian (A.D. 302), has a central hall 200 feet long and 80 feet wide; it was converted into a church by Michelangelo in 1563. The Romans solved this problem by the invention of the groined vault formed by the intersection of two barrel vaults (the ordinary semicircular type) running at right-angles to each other. The groined vault was the predecessor of the later articulated Gothic one.

Other buildings designed primarily for entertainment were the theatres and amphitheatres—

the latter a peculiarly Roman structure used for the gladiatorial combats and wild beast fights which they had inherited from the Etruscans.

The Colosseum.

The largest of these was the Colosseum (A.D. 72–80). This enormous building is oval in plan with concentric rings of seats rising upwards; it contained seating space for 45,000 spectators and above the highest row was a colonnaded portico to provide standing-room for several thousands more. It is 206 yards long, 170 yards wide, and the external wall, 162 feet high, is built in four storeys, the first three consisting of round arches with columns in between, each of a different order of architecture. The first level is Tuscan (a modified and simplified Doric), the second Ionic, and the third Corinthian. The Emperor Titus added the fourth storey with its pilasters (*i.e.*, rectangular pillars half built into a wall) and alternating large and small windows.

From this it will be seen that the Roman usage in respect of columns differed from that of the Greeks in that (*a*) they had five orders in place of four, namely Tuscan, modified Ionic, modified Corinthian, and Composite which combined Ionic volutes with the Corinthian acanthus motif; (*b*) they mingled the orders in the same building; (*c*) they used columns in association with arches; and (*d*) they sometimes used columns for decorative reasons rather than structural ones. The Roman theatre was an advance on the Greek one, in which, as we have seen, the stage was separated from the auditorium, which was often simply a hillside. Built on flat ground, the high raised stage, decorated on the front with reliefs, formed a structural unit with the semicircular auditorium which was of the same height. Externally the appearance was similar to that of an amphitheatre.

Memorials. Greeks and Romans differed, too, in the type of buildings they erected to commemorate their famous men. The Greeks erected few, since they were wisely suspicious of heroes other than athletes, but the Romans built their triumphal arches, columns, and enormous tombs to perpetuate the memory of victorious generals or (in the case of the tombs along the Appian Way) that of wealthy families. The earlier arches, such as that of Titus in Rome (A.D. 81), had only one passage-way and little decoration, but the later ones—on which the "Marble Arch" of London is based—had three passage-ways and a profusion of reliefs and columns. These include the Arches of Severus and Constantine in Rome and one at Orange in France. Tombs were often extremely elaborate in design, some circular and others in the form of small temples.

The Basilica. The Basilica, a typically Roman structure, was an assembly hall serving the functions of a meeting-place, law-court, and covered market. In its earlier stages of development, it was simply a rectangular building divided within by two rows of columns into a central area and side aisles. One end was often semicircular with a dais where the leader of the meeting or the judge could officiate. The chief significance of the basilica is that it became the prototype for the early Christian churches of the western part of the Empire from the time of Constantine. In these the central area became the nave and the semicircular end the apse or choir where the altar took the place of the judge's seat. The nave would have a lofty timbered roof whilst the roofs of the side-aisles were low and often flat. The basilica church is the beginning of the Romanesque style and Romanesque churches of the early Middle Ages are sometimes difficult to distinguish from the basilica originals.

Painting and Sculpture.

Roman interest in sculpture derives from the sack of Corinth in 146 B.C. when Greek statues brought to Rome as booty quickly created a fashion and a flourishing business in copying masterpieces both in Rome and amongst the wily Athenians. These copies served a useful function in that it is mainly through them that we know anything of Greek sculpture, and of course, they played a part in inspiring the great artists of the Renaissance. But the creative Roman artist was thereby put at a disadvantage, being left with the alternatives of either going his own unrecognised way or following popular taste with imitations in Hellenistic style. The bad but fashionable artist flourished, with the result that, so far as sculpture and painting are concerned, Roman art is derivative and on the whole unremarkable. From this criticism we may exclude the portrait heads in which the Romans with their realistic approach excelled, and the reliefs of historical scenes such as those on the triumphal arches and Trajan's Column which are vivid and lifelike.

Wall paintings, of which almost the only examples extant are at Pompeii, are usually excellent copies of Hellenistic murals, but some depicting landscapes and buildings may be original Roman works. The latter are of interest in that landscape painting made its appearance relatively late in the history of art: for Mediterranean antiquity was founded on a concept of human values in which nature played only a subordinate part and the Hellenistic Greeks and the Romans were the first to break with this tradition, however tentative. Marine and rural scenes were also used in combination with geometrical patterns for mosaics on floors and walls of public or private buildings.

Latterly, Roman art came under Christian influence, especially from the time of Constantine, who in A.D. 313 officially recognised the religion. The general tendency (*e.g.*, in the paintings in the catacombs) was to concentrate on the spiritual and symbolic more than the dramatic or pictorial possibilities of a subject. Typical of later Roman sculpture is the attempt to engage the spectator, to "bring him into the picture." For example, a relief on the Arch of Constantine shows the Emperor making a speech with all the figures on the relief facing the spectator as if he were actually in the audience.

Much of the vulgarity of Roman art must be explained by the rise of a wealthy and untutored class such as inevitably occurs with the rapid development of a flourishing industrial and trading civilisation. This happened in Egypt of the Middle Kingdom, in the wealthy Hellenistic Empire, in Rome, and in 19th-century England. We may be sure that in all these periods the rich patron or buyer judged his acquisitions on the basis of "I know what I fancy" and that many mediocre artists were ready to satisfy this fancy whilst the creative artist was told that his works were incomprehensible. This split between popular taste and good (or informed) taste is the essence of vulgarity.

Roman Literature.

The Romans showed little interest in literature until about the 3rd century B.C. They had, of course, their old folklore and tales, but these played little part in their later literature, which was from the beginnings Greek. About 240 B.C. a Greek slave taken at the fall of Tarentum (Taranto) introduced Greek literature into Rome and translated the *Odyssey* into Latin. He assumed the name of Livius Andronicus and was the founder of the Roman comedy. We have seen how the comedies of the Greek Menander were imitated by the Roman comic dramatists Terence (d. 159 B.C.) and Plautus (d. 184 B.C.). Plautus wrote about twenty plays with the type of plot later to be imitated by Shakespeare, Molière, and the popular comedies of the Italian Renaissance—the Commedia dell'Arte. Typical is the story of his *Menaechmi* used by Shakespeare in his *Comedy of Errors* in which twin brothers, long separated, meet once more with resulting confusion.

After the end of the Punic Wars against Carthage (146 B.C.) Greek books were being widely read and the sons of the wealthy were often sent to Athens to be educated. This brought about a more sophisticated and eclectic outlook.

Last Era of the Republic: Cicero and Julius Caesar.

The first century B.C., the last era of the Republic, produced some of the greatest figures in Latin literature, such as Cicero and Julius Caesar, who excelled in prose. Cicero (106–43 B.C.) was famous as an orator in the senate, as a writer on political philosophy, and for his letters. Into the first category comes his *Orations against Catiline* and into the second his two books *On the State* and *On the Laws*. He was an inveterate writer of letters and these are perhaps the most interesting part of his work, giving as they do a vivid picture of life in Rome towards the end of the Republic. In the words of H. A. Davies: "With Cicero Latin reached its highest perfection both as a written and as a spoken language. It became the most perfect language of prose that the world has ever known. In profundity of thought Cicero was far inferior to the Greeks, but no one has ever excelled him as a master of language."

Perhaps the most familiar historian amongst Latin writers is Julius Caesar (100–44 B.C.), whose books on the Gallic War and the Civil War are commonly used as school texts, possibly because of Caesar's terse and simple style. His *De Bello Gallico* gives interesting accounts of the Celtic culture of Gaul and his own campaigns. But the impersonal manner in which it is written may cause some readers to lose enthusiasm for this important book.

Lucretius and Catullus, Masters of Poetry.

Lucretius (99–55 B.C.) expressed in hexameter verse the doctrines of Epicurus. His *De Rerum Natura* (On the Nature of the Universe) is, says Professor Grant, the supreme justification of Wordsworth's belief that "poetry is the impassioned expression which is in the countenance of all science." Beginning with an account of the atomic theory of Democritus, the creation of the world, and the beginnings of life, it goes on to deal with the early ages of man and civilisation. Its materialist approach made Lucretius' work unpopular in his own and mediaeval times, and even during the Renaissance when his style was praised his philosophy was not. But he was later to be admired by Hobbes, Voltaire, Leopardi, Shelley, Swinburne, and Matthew Arnold.

Catullus (87–57 B.C.) was the great writer of Latin love-lyrics which rival those of Burns and Heine in their ability to express intense moods. He used and adapted Greek metres and rhythms and thereby influenced later verse in Augustan times. There is none of the moralising in Catullus that one finds occasionally in Horace, of whom we shall speak later, nor does he, like Horace, indulge in patriotic odes or mannered poems on the virtues of country life. These differences are perhaps related to the times in which each lived. Catullus, "tenderest of Roman poets," as Tennyson described him, lived in a disintegrating society at the close of the Republic; he was, says R. G. C. Levens, an individualist clinging to the one standard he could feel secure, his personal integrity.

The Augustan Age: Virgil, Horace, and Ovid.

Probably no Latin, and very few other, poets have had the influence of Virgil (70–19 B.C.). His *Eclogues*, a series of ten pastoral poems inspired by Theocritus and set in a golden Arcadia, had an immense and immediate effect on Roman culture. The Fourth Eclogue prophesies the birth of a child who will bring to the world an age of peace and happiness, and from the time of Constantine right through the Middle Ages it was believed that the child was Christ and that in some respect Virgil was a forerunner of Christianity. He was regarded as the Prophet of the Gentiles, and it will be remembered that Virgil is Dante's guide in the *Divine Comedy*. It is, however, more likely that the child referred to was the infant Augustus. The *Georgics* are poems dealing with the realities of farm life in Italy and the beauties of the Italian countryside, but, of course, Virgil is best known as the writer of the *Aeneid*, perhaps the greatest of all epics after Homer's *Iliad* and *Odyssey*. The *Aeneid* tells the legendary story of the hero Aeneas, who, bringing his household gods from burning Troy, succeeds with their aid in founding Rome. Virgil goes on to tell how Rome is destined to rule the world—a sentiment which made him popular at a time when the Empire had just been founded and people were anxious to feel that the new Rome had a great future. The *Aeneid* exercised a tremendous effect both on Roman and mediaeval culture, and Virgil was regarded throughout these times as an almost superhuman sage, a supreme model for the poet, and a spiritual leader. It is misleading to compare Virgil's work with that of Homer, belonging as he did to a society utterly remote from Homer's; the *Aeneid* owes a great deal to the Hellenistic epic of Apollonius of Alexandria and to earlier Roman epics.

Horace (65–8 B.C.), son of a Greek freedman, is best known as a lyric poet. His *Satires*, which appeared about 30 B.C., were witty and effectual. Horace fought on the Republican side at Philippi, but being pardoned lived to become poet laureate to Augustus. He therefore wrote poems in accord with his position, some of which at a much later date were approved of by Frederick the Great and Louis IV as encouraging quietism under autocratic rule. Nevertheless, Horace, if less passionate than Catullus, is one of the greatest of poets.

Virgil's younger contemporary Ovid was born in central Italy in 43 B.C. and died in exile at Constanta on the Black Sea where he had been sent by Augustus for "a poem and a mistake." He was witty, a wonderful teller of tales, and, lacking any serious principles, differed both from the high-principled Virgil and the practical Horace, who knew on which side his bread was buttered so far as the Emperor was concerned. Ovid wrote many works, some of which have been lost, but amongst his extant elegiac poems are the *Amores, Heroides, On Cosmetics, The Art of Love*, and *The Cure of Love*. However, his greatest work is the *Metamorphoses*, a collection of classical tales in verse taken from Greek mythology which were later utilised by Chaucer and Boccaccio and inspired the painters of the Renaissance. The ideal of romantic love found in Ovid by the troubadours and minnesingers (although one may wonder where) influenced mediaeval notions of chivalry, and later Tasso, Shakespeare, Spenser, Keats and Goethe. Ovid is one of the main sources of classical mythology, but being a sceptic in regard to all religions, his stories of the gods were used only as material for his peerless art.

The Stoic Juvenal (d. A.D. 135), later in time, wrote passionate satire, but tended to spoil his own case by the savagery of his attacks, which spared nobody. Martial (d. c. A.D. 104) was a Spaniard who came to live in Rome in A.D. 64. His epigrams (in fifteen books) are characterised by the sting in the last line of the verse, and this form, in the shape of the lampoon, was popular in Renaissance Italy.

Historians and Biographers: Livy, Tacitus, and Suetonius.

Livy, who died in A.D. 17, wrote his *History of Rome from the Founding of the City* in 142 volumes, of which only a quarter now exist. His style has none of the brevity and simplicity of Caesar's, and his manner of presentation is often far from factual since, as an admirer of the Republic, he was not above accepting legends which a little investigation would have shown to be untrue. His works are important, however, as dealing with some of the significant periods in Roman history.

Tacitus (A.D. 55–120) in his *Annals* did for the early years of the Empire what Livy did for the Republic, and, like Livy, he tended to be more concerned with individual figures than with history. Tacitus was a son-in-law of Agricola, the Roman Consul of Britain, and his life of the Consul is one of the finest classical biographies. His *Germania* gives an account of the tribes in Germany and their way of life.

Suetonius (d. A.D. 150) was secretary to the Emperor Hadrian, and his *Lives of the Twelve Caesars* recounts gossip relating to the Caesars from Julius to Domitian. Perhaps for this reason it is still immensely popular and read by many who would regard Caesar, Livy, and Tacitus as bores. Suetonius has frequently been regarded as a sensationalist with a dubious concern for the truth, but the recent tendency has been to accept him as, on the whole, reliable. In any case his position as imperial archivist must have given him opportunities not open to others to examine primary material.

At heart the Romans were puritans, and when great wealth made the ruling classes increasingly corrupt and vulgar they became an obvious target for the satirists. These, particularly towards the end of the 1st century A.D., belonged for the most part to the rising middle classes who disliked militarism and the rule of money.

Prose Writers: Petronius, Apuleius, and Others.

Two of the greatest works from the Empire, both works of prose, are the *Satyricon* of Petronius and the *Golden Ass* of Apuleius. The identity of Petronius is not known for certain, but it is possible that he was a favourite of Nero's who on falling out of approval committed suicide in A.D. 65. Essentially a picaresque novel in Rabelaisian style, the *Satyricon* has been compared with Rabelais himself and with Fielding and Smollett. In our own day Cyril Connolly has placed Petronius with Tacitus as two of the Latin prose-authors who have a message for modern writers. Some poems by Petronius anticipate the mediaeval Latin lyric.

Apuleius, born in Algeria about A.D. 123, was a devotee of Isis and his *Golden Ass*, says Professor Michael Grant, is "the supreme efflorescence of the ancient prose-romance—'last child of the Greek genius'—and the only Latin novel that has come down to us complete." (Petronius' *Satyricon* is incomplete.) It delighted the people of the Renaissance, greatly appealed to the Elizabethans, inspired Raphael, and in some measure its style anticipated mediaeval Latin prose.

Other writers on various subjects whose works have (sometimes unaccountably) influenced later generations were Seneca, Quintilian, Pliny, and Vitruvius. Seneca, the hypocritical Spaniard, died in Rome in A.D. 65. He was tutor to Nero, and on the basis of his Stoic philosophy wrote moral essays on anger, on the brevity of life, and on clemency. He also wrote plays in the style of Euripides which appear to have had some influence on the Italian dramatists of the Renaissance and the French drama in the time of Louis IV. In his last days he plotted against Nero and was ordered to commit suicide, which he duly did. Quintilian's *Institutes of Oratory* influenced the views of educationists for many generations, and the *De Architectura* of Vitruvius, who lived in the 1st century B.C., was for long the leading text-book on architecture. Pliny the Elder's *Natural History* dealt with all the sciences and included for good measure gardening, medicine, and the fine arts; the book was highly thought of, not only by the Romans, but throughout the Middle Ages, although its contents are little but the ill-digested and uncritically accepted nonsense resulting from too many hours spent in reading. His nephew, Pliny the Younger, who died about A.D. 114, wrote a large number of letters in excellent prose describing life under the Empire as Cicero's did under the Republic.

Influence of Greece. So powerful was the influence of Greece that many Roman writers did not even write in Latin. Marcus Aurelius (d. A.D. 180), the Stoic emperor, wrote his Meditations in Greek, and Galen his physician used Greek for his great medical treatises. Plutarch (d. A.D. 120) after living twenty-five years in Rome, knew little Latin and his parallel *Lives*, a collection of biographies of twenty-three Roman and twenty-three Greek notables (used by Shakespeare for much of his material), was in Greek. *See* M12.

Early Latin Christian Literature. Early Christian works written in Latin include the *Confessions* and *The City of God* of St. Augustine (A.D. 354–430), the works of Tertullian (A.D. 160–225), and the Latin translation of the Bible completed by St. Jerome in A.D. 405 and known as the Vulgate. St. Augustine's works may be justly claimed to have influenced the world, and in the secular sphere his *Confessions* brought into existence a new type of autobiography copied much later by Rousseau. The rude and fanatical Tertullian can be of little interest save to theologians. Many of the Church Fathers belonged to North Africa, the source of by far the greater part of Latin Christian literature.

BYZANTINE ART.

Byzantine art developed in the eastern part of the Roman Empire after Constantine founded the city of Constantinople in A.D. 330 on the site of old Byzantium, now modern Istanbul. But even while there was one ruler in the East and another in the West (Milan and Ravenna), the Roman Empire was basically united until A.D. 476 when the West fell to the northern barbarians. From this time the Byzantine Empire, (which then included Greece, the Balkans, Asia Minor to the Euphrates, Syria, and Egypt), became and remained until 1453 the haven and protector of European civilisation against Slavs, nomads from the steppes of Asia, and the Arabs. In the 7th century Egypt, Syria, and Mesopotamia were lost to the Arabs; in 1204 the Crusaders captured Constantinople; and when it finally fell to the Turks in 1453 the former Empire was a mere strip of land around the capital. But it was perhaps the Crusaders who finally destroyed Byzantium; for after their onslaught it retained only a shadow of its former greatness.

Byzantine art had many sources, the strongest being Greek, Syrian, Egyptian, and Islamic. It was cosmopolitan and accepted many traditions, including pagan ones. ("We need a Christian and a pagan schooling: from the one we gain profit for the soul, from the other we learn the witchery of words," wrote Choricius.) But it was above all, Christian. To the mediaeval peoples of Europe prior to the 11th century, Byzantium played a part analogous to that played by Athens and Rome in classical antiquity. Her art was one of incredible luxury and fantastic splendour, yet Gibbon could claim in his *Decline and Fall of the Roman Empire* that "Byzantium was one of the most wretched and gloomy states that man has ever established."

Byzantine Architecture.

Constantinople, built on a peninsula, was protected on the west by a great wall built by Theodosius II (408–50) to replace the earlier one built by Constantine. Elsewhere it was surrounded by sea. The wall with its great round and square towers, although disintegrating, can still be seen with the Golden Gate and the Castle of the Seven Towers at the extreme southerly end. It was through this great white marble gateway that the Emperors made their official entries into the captial. Towards the eastern end of the peninsula were the large Forum Augustaeum with its Golden Milestone from which all the roads of the Empire started, the Imperial Palace, the Palace of the Patriarch, the Hippodrome or race-course, the Church of Sta. Sophia, together with baths, libraries, the Senate-house, and many other buildings. Beneath the city were the immense underground cisterns and defence works which, after the churches, were the most important achievements of Byzantine architecture. The cisterns, vaulted and domed with roofs supported by huge ornate columns, were designed to maintain water supplies during a siege. Some are still in use today.

Churches: the Cathedral of Santa Sophia. The greatest glory of Byzantine architecture is the great Cathedral of Santa Sophia—"One of the

great things of all time" as Lethaby described it. Built by the Emperor Justinian (483—565), it has a dome almost as large as that of the Pantheon, but unlike the Roman dome with its circular supporting walls, the Byzantine dome was placed on a square sub-structure consisting of four piers which support four arches. The central area is over 100 feet square, but is increased to the east and west by great hemicycles which double its length to more than 200 feet. (The custom, derived from temple architecture, of planning churches on an east-to-west axis was generally accepted.) The piers are 25 feet square, the dome 46 feet deep with its centre 179 feet above the floor, and the two hemicycles are roofed in by semidomes which meet the walls just beneath the central one. Still lower smaller domes of various sizes "heave up above one another like a cluster of bubbles." The hemicycles break off into smaller apses, and the central area has great aisles supporting galleries along each side.

Although Santa Sophia is enormous, Byzantine churches are ordinarily small. Amongst these are the churches of SS. Sergius and Bacchus (527) and of Sta. Irene (740) in Constantinople, S. Vitale at Ravenna, and the much later and larger St. Mark's at Venice (1042–71). St. Mark's, however, has been so overlaid by later additions that its exterior is almost wholly changed.

The Dome.

The Byzantine innovation in architecture was to evolve, from the wooden-roofed basilica, the domed and vaulted church, the prototypes of which were the Pantheon and the vaulted imperial baths. The plan was ordinarily cruciform with the dome placed above the central crossing, and the east end was rounded to form a single apse or more often three. Church interiors were lavishly decorated; the lower part of the walls with variegated panels of marble, the upper parts with mosaics and murals designed to illustrate the Scriptures. Columns were essentially eastern in character deriving from modifications of Hellenistic patterns, and although the Byzantian dome must have been influenced by Roman models, its perfecting in the new style owes much to Christian Egypt and Syria.

The Byzantine domed church spread as far west as the south of France (*e.g.*, the cathedral at Périgueux (1120), which has some resemblance to St. Mark's), and eastwards throughout the Moslem world as in the 7th-century Mosque of Omar in Jerusalem. It spread to the other lands—Persia, Egypt, North Africa, and parts of India—which came under the conquering forces of Islam, and there, of course, it was used in mosques and shrines and underwent modifications. Northwards it spread to Russia, where the oldest surviving church built at Kiev in A.D. 1000 is a copy of a Byzantine original. The same style has been followed ever since in southern Russia, and although different conditions further north necessitated considerable changes, it was Russia which became heir to the Byzantine way of life.

Painting, Mosaics, and Decorative Arts.

Byzantine art was utterly unlike anything that had gone before. The new style was well-developed by the 4th century, developing gradually during the reigns of Constantine and Theodosius the Great towards the great upsurge of the First Golden Age under Justinian in the 6th century. This continued throughout the following century, but received a setback during the next when the emperor decreed that painted or sculptured images of God, Christ, the Virgin, or the saints were to be forbidden. This was the Iconoclast controversy in which emperor, army, civil servants, and some bishops were violently opposed by the monasteries and European Greece. The worshippers of images triumphed, and in 843 the decree was lifted. It is usually stated that the lack of statues in Eastern churches was the result of this struggle, but according to Baynes there is no satisfactory evidence that statues were so used even before the controversy. However this may be, the lifting of the decree was followed by a Second Golden Age when Byzantium was at the height of her power and produced much of her greatest art; this period was terminated by the armies of the Fourth Crusade in 1204. From 1204 until the final downfall in 1453 the impoverished and diminishing Empire still produced great works, notably in such inexpensive fields as painting.

Painting. The art is an extraordinary mixture of the spiritual and the sensuous. It is essentially two-dimensional and never attained to any skill in representing figures in the round; it is passionately emotional in its use of colour, which is not used for purely decorative or descriptive purposes as in Egypt, Crete, or Greece, but rather to excite the observer. The artist was anonymous, his art was based on tradition, and he was kept within the tradition by strict rules which prescribed even the most minute details of how figures were to be represented. This was an art limited by religious orthodoxy, showing no interest in nature, but on the other hand unaffected by the power and prestige motifs of Egypt, Mesopotamia, and Rome. Paintings were on walls, icons, and illuminated manuscripts, all in much the same style and often by the same artist.

Icons.

Icons are religious paintings designed for devotional use either by the individual or in church rituals. In size they range from the very small to large ones in two or three panels on church screens dividing the nave from the chancel (these are known as diptych and triptych respectively). The icon style of painting derives from the tomb paintings of Hellenistic and Roman Egypt, where it had become the custom to leave a portrait of the dead over the mummy's face. Icons of the earlier periods are rare, those of the 6th century probably having been destroyed and those of the 9th–12th centuries mostly removed to Russia. They were essentially simple and the subject was ordinarily the Virgin and Child, or the Virgin, Christ, and John the Baptist. From the 13th century icons were more complex, dealing with New Testament scenes or scenes from the lives of the saints, and by this time schools of painting, each with their own style, were arising in other countries, including Russia, which accepted the Eastern Church. The 16th-century icons begin to show Italian influence just as Italian painting was influenced by Byzantine. Most icons were painted on wood, but mosaic was sometimes used, and some icons were of metal.

Interior Decoration. Like the Romans, the Byzantine architect was more concerned with interiors than the external aspects of a building—they "built from the inside outwards." Many of their churches had no significance until one entered them and the walls were so much blank space until they could be filled with paintings and mosaic. One of the earliest important works of Christian art is the burial chapel of Galla Placidia, sister of the Emperor Honorius, built at Ravenna in the 4th century. The mausoleum is the size of a small cottage, and the sacred figures on the walls bear little resemblance to the conventional ones which later became familiar to the West. The saints look like Roman philosophers and Christ is represented without a beard as a placid shepherd. Yet, says Eric Newton, "to enter the brick shell and to find oneself in an unearthly gloom encrusted with blue and silver and gold mosaics is to be taken at a leap right across the Greek peninsula into an atmosphere that only a semi-oriental vision could have conceived." The nearby church of S. Vitale built by Justinian a century later shows in its mosaics a movement away from Roman models towards increasing symbolism of the new type and what Newton describes as an orchestral use of colour. Roman realism had never got beyond the use of old pagan symbols in which figures of Apollo or Orpheus were labelled Christ and the disciples resembled Roman senators, but Byzantium created something new. S. Vitale, with its mosaics of Justinian and his

ex-actress wife Theodora, so impressed Charlemagne that he had a replica built at Aix-la-Chapelle.

Mosaics.

The Byzantine use of mosaic was novel in several respects. The Romans had used it to fill in spaces where paint was unsuitable; they had used it in a manner which was essentially that of the painter; and they had used it in small amounts and particularly on floors as a mere decoration. Byzantine art used it as a medium for visual symbolism on a gigantic scale and with a technique specifically intended for a medium which is naturally rigid and inflexible and not at all like paint. These Mosaics are impressive almost regardless of the quality of their detail because of the cumulative effect of their profusion. Mosaic, said William Morris, is like beer—it is no good unless you have a lot of it. Much of Byzantine art must remain beyond our experience unless we are indefatigable travellers, since it is meaningless in bits and pieces removed from their total background. However, some of the best examples, other than those already mentioned, are to be seen at St. Agnese and St. Prassede in Rome, Daphni near Athens, Cefalu and Monreale in Sicily, and St. Mark's in Venice. These range in time (in the order given) from the 7th to the 13th and 14th centuries.

Other Decorative Arts.

Byzantine illuminated manuscripts provide further proof of their painters' skill and do not differ essentially in style from the paintings on walls or icons. Books were lavishly bound in carved wood or ivory, in metal decorated with precious stones, in leather, or cloisonné enamel. The latter technique was particularly well developed in Byzantium and the excellence of the results even in the smallest of objects is all the more remarkable in view of the process which involves an outlining of a design in fine gold wire set in a gold base with the intervening spaces or cloisons filled in with coloured vitreous pastes which are then fired. Ivory carving for smaller objects and metal-work for objects as varied as enormous church doors, crosses, and icons of all sizes were specially suited to the Byzantine genius, as also was their remarkable skill in textiles for which they were famed. Indeed, one of the most important industries was the production of silk and the making of vestments and brocades for the clergy and officials, tapestries and other decorative materials. Originally silk had been imported from China by way of Turkestan and Persia, but according to tradition wandering monks smuggled silkworm eggs into the Empire within their canes and thus began a flourishing industry which accounted in no small degree for the prosperity of Byzantium. Designs were woven or embroidered and took the form of stylised animals or plants or geometrical figures. Ceramics, glassware, seals, and even coinage all show the aesthetic sensibility of their creators.

Byzantine Literature.

Byzantium was a highly literate society and left many important works of theology, history, and poetry. The language used was classical Greek, and Latin slowly died out after the reign of Justinian. But very little of this considerable literature, which tended towards the archaic and artificial, is of interest to the general reader. Perhaps the main Byzantine contribution in this field was the preservation of the great literature of classical times and the detailed accounts left by historians of their own age.

Three contemporary historians documented the reign of Justinian—Procopius, Agathias, and Menander Protector. *The Wars* of Procopius is the main source of information on the Emperor's wars to restore the Empire to its previous frontiers, and *The Buildings* gives an account of Justinian's public buildings. Agathias was also a poet who collected a number of "the more modern and recently composed epigrams" (here the word simply means a short poem) as Meleager had done some six hundred years earlier. These and other collections were brought together in the 10th century by Cephalas and form what is now known as *The Greek Anthology*. One of the last Latin epics was the *Johannid* of Corippus, which recounts the distasteful events of the Emperor Justinian's war in Libya which decimated the population. In the 10th century Suidas produced a dictionary which includes many quotations from writers now lost. Michael Psellus (d. 1078) was a Platonist who wrote on wide range of subjects.

PERSIAN AND ISLAMIC ART.

Persia became a powerful Empire under Cyrus the Great (550 B.C.) and his successors Darius and Xerxes, as the ruins of the great cities Persepolis and Susa reveal. At Persepolis the royal palace was approached by a flight of over a hundred steps leading to the gateway of winged bulls with human heads, the entrance to the columned halls within. The stone reliefs of tribute bearers to the king which adorn the great stairway and the famous frieze of archers from the palace of Darius I at Susa (now at the Louvre) are typical of the art of the period, which was under the influence of the defeated Assyrians. In 330 B.C. Persepolis was sacked and burnt by Alexander the Great and his conquest brought in Greek forms. Little was heard of the Persians until A.D. 224 when a new ruler seized power and became first of the powerful Sassanid line. Amongst the buildings of this period is the palace of Ctesiphon, which is remarkable in that two rectangular blocks with decorated façades are joined together by an enormous vaulted arch open to the front, where the king held public audiences. Also typical are the stucco carvings and the large rock carvings commemorating events in the king's life; vessels of gold, silver, and bronze show excellent workmanship.

The Moslem Era: Merging of Islamic and Persian Cultures.

In the 7th century (622) the prophet Mohammed welded the polytheistic nomads of Arabia into a single military force accepting one god. In little more than a century Islam had invaded Persia, the near East, North Africa, and most of Spain, leaving Byzantium with the Balkan peninsula and part of Asia Minor.

These fanatical warriors had no skill in art and therefore had to rely on native craftsmen to satisfy their needs. Both Pagan and Christian buildings were looted and some of the first examples of Islamic architecture were given colonnades of pillars removed from widely divergent sources, some of which had to be raised to the necessary height on added bases. The early mosques were designed by Byzantine and other architects, and the Dome of the Rock in Jerusalem (691), the Great Mosque in Damascus, and the Aksa Mosque, also in Jerusalem, are Byzantine in style. When the Crusaders arrived in Jerusalem they took the Dome of the Rock to be the original temple of Solomon, and under this delusion an essentially Byzantine building was copied all over Europe. The Arabs also passed on to western Europe the pointed, as contrasted with the rounded, arch which two centuries later was to become the characteristic feature of Gothic architecture.

Islamic culture had many sources and showed different local characteristics based on pre-existing native art forms. It borrowed the aisled sanctuary from the Roman basilica, the minaret from the bell-towers of Syria, the stucco carvings, vaulting, and the pointed arch from Persia. When, in the 9th century, the unity of Islam began to break down, even more distinctive local styles began to appear. Tenth century Egypt had an art of its own, Spain evolved a style known as Moorish which later spread to North Africa, and in India under the Moguls of the 16th century

Hindu and Persian influences mingled with Islamic to produce the characteristic Mogul art of which the Taj Mahal built by Shah Jehan is the best-known architectural example.

Persian Renaissance.

Art in Persia flourished under Moslem rule, although the Persians, who were Zoroastrians and non-semitic, never took kindly to the imposition of Islam and always remained somewhat unorthodox. From the 10th century Persia was by degrees occupied by groups of Turkish tribes, and one dynasty, the Seljuks, conquered the country in the 11th century, embraced Islam and introduced new forms in architecture, such as the tomb tower roughly cylindrical in shape and made of bricks arranged in decorative patterns, the cruciform mosque in which each side of the court has a vast niche based on that of the vaulted hall of Ctesiphon, and the square mausoleum with a door in the centre of each side and a domed roof. The Seljuks were masters in such media as silk, metals, and pottery, which was sometimes decorated with miniature scenes. Arabesques in colour or low relief with flowing lines, and patterns of flowers, leaves, branches, animals, and scroll-work fancifully intertwined were common as decorations. Further stimuli were given to Persian art by the Mongol invasion (1220) under Jenghiz Khan and under the dynasty established by Tamerlane (*c.* 1385–*c.* 1500). Persian work in miniatures was becoming increasingly important and many fine mosques were built, notably in Afghanistan and at Samarkhand and Bokhara in what is now Russian Turkestan. The 15th-century mosques were particularly splendid, being cruciform in shape with two-storeyed arcades between the arches decorated with mosaics of coloured tiles which covered the walls and domes. Persian illuminated manuscripts and miniatures of this period are exemplified by the work of the great painter Bihzad, whose illustrations to the poems of Nizami may be seen in the British Museum.

But perhaps the greatest period of Persian art came just before the close. Persia had become the melting-pot of many races, the clearing-house for the art of the whole eastern world, the teacher of Byzantium and Islam and indirectly western Europe. During the 16th and 17th centuries all the arts flourished, particularly under the great native ruler Shah Abbas, who redesigned the city of Isfahan. Pottery, carpet-making, painting, and the illumination of manuscripts in designs which latterly were influenced by China reached their highest level. Isfahan was sacked by the Afghans in 1722 and the old culture declined steadily from its former glory.

Persian art delights with its exquisite sense of beauty and its very un-Oriental sense of humour. The artist was a master in the use of colour, and art was used as a medium for bringing joy into every aspect of life, which was itself regarded as an aesthetic experience. A suitable epitaph for the Persia that is gone might well be that of Tacitus for the dead Petronius: "Most men toil for it, but this man loitered into fame. Never the glutton or the profligate—he was the scholar rather, the artist of exquisite living."

Islamic Art Elsewhere.

The religion of Islam is basically puritanical and the Arabs themselves were not an artistic people. What is described as Islamic art is more correctly regarded as the art of widely different peoples adapted to the new religion—an old form poured into a new mould. Arab puritanism refused to permit any representation of living beings, animal or human, a refusal which severely limited the scope of the artist, whose art had to be wholly confined to decoration and never showed the marvellous variety found in other cultures. Everywhere one finds designs of the greatest intricacy; walls, arches, doorways, books, objects in metal, pottery, glass or leather, textiles and carpets are decorated with interlacing lines, leaves, branches, texts from the Koran, and sometimes stylised non-realistic animal figures. These arabesques originated with Moslem artists of 10th-century Egypt. But sculpture, apart from decorative reliefs, did not exist, nor did large-scale painting, although miniature painting flourished in Persia. Another type of design was the purely geometrical one of repetitive many-pointed stars or octagonal shapes often seen in pierced window grilles or in the mosaic work of fountain basins some of which are extraordinarily beautiful .

Some time after the Prophet's death there were quarrels between rival sects as to the succession. For some time the Caliph ruled from Damascus, but during the 8th century the Caliphate shifted to Baghdad. In the following century Spain established a Caliphate of its own. Although the civilisation of Islam is often said to have been superior to that of the West at the same time, this statement can only be accepted with reservations. Certainly the Moors of mediaeval Spain were superior culturally to the Christians of Europe, and Baghdad was the centre of a sophisticated civilisation, as were to a lesser degree Cairo and Damascus, but the great masses of North Africa and Arabia remained unchanged.

Architecture: the Mosque.

The most important form of Islamic architecture is the mosque. The bare essentials of a mosque are a space within which the faithful may pray and some feature to indicate the direction of Mecca towards which they must face. The first "mosque" was the court of Mohammed's house in Medina, but with the spread of Islam it became necessary to build new structures, which, however, remained simple, being rectangular walled spaces with overhanging palm leaves and branches on the wall facing Mecca. These protected the worshippers from the sun. More complex but still simple mosques were built in Syria on the plan of the basilica with a vaulted roof, side aisles formed by columns, and niches or mihrabs for prayer on the appropriate side. Another early mosque is the one at Damascus built in 708; here the paved rectangular court is surrounded on three sides by a covered portico. On the remaining side is an area surmounted by a dome and divided into three aisles with the prayer niche at the end of the nave and a pulpit led up to by steps to the right of the niche. At the opposite end of the courtyard is the minaret. This plan is one of the commonest in mosque-building, and here again the prototype was the aisled basilica. The Dome of the Rock (691) in Jerusalem is octagonal in shape, with a large dome resting on an inner circle of columns and arches; this is fundamentally the plan of S. Vitale in Ravenna, and the older Aksa mosque of Jerusalem is built in Roman style. Another Byzantine type of mosque was built by the Ottoman Turks in the form of a large square structure covered with a great dome—an example is the Suleiman Mosque in Istanbul.

The cruciform mosques of Persia have already been mentioned, and Persian (Sassanian) influence is also seen in the great arcades of pointed arches and the pointed windows of the outer walls of mosques in Cairo and elsewhere. A notable example is the large mosque of Ibn Tulun built in 876–79 at Cairo—that is, during the reign of King Alfred in England—which anticipates Gothic architecture in some of its features by several centuries. One of the finest buildings in Cairo is the Al-Azhar Mosque and University (970), but there are many others in this city. (Egypt shared too with Persia in the production of unorthodox bronze sculptures of animals which often have their surfaces covered with arabesques and writings.)

Moorish Art.

Spain was conquered by the Moors in 711, and this culture is important for the influence it had on Christian Europe. France, Germany, and other countries were stimulated by the intellectual and artistic life centred in such cities as Granada, Toledo, Seville, and the capital Córdova. In Toledo and Córdova especially, the learning of the East, compounded of Persian, Indian, Greco-

Roman, and specifically Arab elements, was passed to Christian scholars from the 12th century onwards. Weaving of brocades and carpets and leatherwork were carried to great perfection in Córdova; damascene art originating in Damascus was used in Toledo particularly in the ornamentation of sword-blades with inlaid designs of gold and silver. Other minor arts were the making of jewellery and of articles in gold, silver, and brass, the carving of ivory, and pottery sometimes decorated in gold lustre.

The 9th-century Great Mosque of Córdova, perhaps the best example of Islamic architecture in the West, is based on the plan of the Great Mosque in Damascus. Used as a Christian cathedral since the 13th century, it has a sanctuary with nineteen naves supported by many pillars and arches in the horse-shoe and cusped forms typical of Moorish architecture. Similar but smaller mosques are found in North Africa, which was also under Moorish influence. Many of these have distinctive square minaret towers decorated with blind arches or arcades, windows, and carved panels and a lantern at the top.

The Alcazar of Seville and the better-known palace of the Alhambra at Granada, both built about the 13th century, are famed for the beauty of their columned courtyards, arcades, and fountains.

Islamic Literature.

As with the other arts, only a small proportion of Islamic literature is actually the work of Arabs or even written in Arabic. An immense amount of work was done by Arab scholars, particularly in Baghdad and Córdova, in translating scientific and philosophical manuscripts from the Greek and Latin originals, but, apart from the Koran, almost the only poetic or fictional works known to readers in the West are Persian.

On the whole, the Arabs were not interested in Greek or Latin literature outside the fields of science and philosophy, but it was the translations of these works and the original work of such Arab writers as Rhazes (d. 923) and Avicenna (d. 1037) in medicine, Averroës (d. 1198) in philosophy, that brought a new stimulus to learning in Christian Europe. Indeed, in this respect Islam was a far more potent force than Byzantium.

Much of the Persian output was poetry, and the *Rubáiyát* of Omar Khayyám is known throughout the world. Omar, who died in 1123, is more highly regarded by the Persians as an astronomer and mathematician, the great poets being Firdawsi (d. 1020), who wrote historical poems, and Hafiz (d. 1389), the Persian Catullus. Perhaps Omar and Hafiz appeal to readers unacquainted with Persia because they deal with the fundamental realities of love and death rather than the history, ancient legend, and effusive flattery of nonentities found in the writings of technically better poets. Another masterpiece of world literature is the *Arabian Nights*, a collection of tales drawn from Indian, Persian, Egyptian, and other sources. The setting is Baghdad at the height of its power, and Sindbad, Ali Baba, and Aladdin are characters known to everyone.

MEDIAEVAL ART.

I. THE DARK AGES.

The Middle Ages may be taken to be the period between the fall of the Western Roman Empire in A.D. 476 and the fall of Byzantium in 1453. The earlier part between A.D. 500 and 1000 is sometimes known as the Dark Ages. It was a time of disorganisation and movements of peoples when the administrative structure of the Empire had broken down, and Europe was pillaged by Goths, Vandals, Vikings, and Danes. Learning, even mere literacy, was confined for the most part to monasteries and convents, and art showed no one style but a conflict between several which began to resolve itself only towards the end of the period. Byzantium and Italy preserved their old links with the classical past, Spain was under the influence of the Moors, and northern Europe, including the British Isles, returned to an earlier peasant art style. But in the end the main deciding factors were the return by way of Italy of the classical and Christian tradition through the energy of such men as St. Benedict (480–557) and the Celtic tradition of the peoples from the west and north.

The extraordinary thing was that the relatively primitive Celts played as large a part in the return to a civilised life as did the Italians. They produced a distinctive Christian art which, with the austere religion of their Church, passed by way of Iona and Northumbria (northern England and southern Scotland) to the continent, where St. Columbanus (d. 597) founded the great monasteries of St. Gallen, Reichenau, Luxeuil, and Bobbio from which the pagans of the Rhine valley were Christianised.

Celtic Art: Clash of Two Traditions.

Celtic Art had developed from that of the iron-age Celts. It was essentially a decorative art of purely abstract designs applied to small objects in everyday use such as household utensils, weapons, bridles, and so on.

The invading Vikings, too, were excellent craftsmen in wood and metal, which they ornamented with complex patterns of dragons, birds, or serpents endlessly intertwined. The dragon in particular had the magical function of frightening off evil spirits and hence appeared on the figureheads of ships and on sledges. These art forms come within Herbert Read's definition of "peasant art" and show its four basic characteristics: the decorated objects are utilitarian, the designs are abstract, they are unchanging over many centuries and they show an extraordinary universality. Thus, the wood carvings of the Norsemen are similar to those of the New Zealand Maoris and a piece of 18th-century pottery from Somerset may be almost indistinguishable from pottery made in 10th-century China. This art came under the influence of Christianity and the East, in part due to contact with the Roman Church in Northumbria (when Byzantine motifs were introduced) but at an earlier date by way of the Scottish St. Ninian and others (who brought from the continent Egyptian forms of worship, Egyptian texts and art through contacts with St. Martin and, indirectly, St. Hilary). The monks of Celtic Ireland and Northumbria, using their own idiom and that of the Norsemen, produced a new religious art with results which are best seen in their illuminated manuscripts and monumental stone carvings.

The Lindisfarne Gospel made in Northumbria about 700 and now in the British Museum is one of the best examples of manuscript painting; here, for example, we see the cross on one page built up of an amazing network of intertwining dragons set against a background of even more complex patterns. Human figures, too, are treated in the same abstract manner, the body becoming a mere excuse for pattern-making in which folds in the robes appear as twisted ribbons and the face is an expressionless mask with hair and even ears treated as scrolls. The Irish Book of Kells, dating from about the same time, is similarly decorated, and identical patterns are found on the stone crosses still standing in Ireland, northern England, and southern Scotland, which are amongst the earliest examples of monumental carving in Europe. Some combine the wholly abstract Celtic designs with the new eastern and Christian symbols: "in a prickly nest of geometrical lines, two birds of paradise will settle, carrying in their beaks a bunch of Eastern grapes. David comes with his harp, and the three children in the furnace; Adam and Eve, and the sacrifice of Isaac, are represented in panels reserved among the bands of abstract ornament; and finally the stone is dominated by Christ in Glory and the company of angels." So one cross is described by Herbert Read, who adds: "no monuments in the world are so moving in their implications; they symbolise ten thousand years of human history, and represent that history at its spiritual extremes nearest and farthest from the mercy of God." It

was this clash of two traditions, the eastern and the peasant, that changed art in Western Europe. Fine crosses can be seen at Otley in Yorkshire, Ruthwell in Dumfriesshire, Abercorn in Midlothian, Sandbach in Cheshire, Irton in Lancashire and Eyam, Bakewell, and Bradbourne in Derbyshire.

Architecture.

The monastries of the early Celtic Church were simple and often little more than a cluster of stone bee-hive huts, an oratory, and a stone cross. Elsewhere in England and Western Europe buildings were more elaborate, but little remains of them today. By the time of Charlemagne (768–814) Frankish rule extended from France to Holland, Belgium, western Germany, Austria, Bavaria, Switzerland, and northern Italy, yet in this whole area only two important buildings are older than the 11th century: the Cathedral at Aix-la-Chapelle (Aachen), copied by Charlemagne from S. Vitale in Ravenna, and the small church at Germigny des Près in France, built 801, and showing Moorish influence. England was in a somewhat better position, although the remains are small and not outstandingly beautiful. The oldest church, erected before the Romans left in 410, is at Silchester near Reading, and its foundations indicate that it had a nave, side-aisles, a transept, and an apse. It was only 45 feet in length. The rest of the buildings are Saxon dating from the years 600–800, after which the Danish invasions destroyed many and effectively prevented further building until just before the Norman Conquest. Most of the early churches are found in Kent, the part of Western Europe incomparably the most rich in buildings of this period. They include the 7th-century churches of SS. Peter and Paul, St. Mary, and St. Pancras in Canterbury, St. Andrew at Rochester, St. Mary at Lyminge, and St. Mary at Reculver. Outside Kent there is the church at Brixworth in Northamptonshire, one of the best-preserved; and churches in Escomb and Monkwearmouth in Durham. The Saxons had no tradition of building in stone, and the works in Kent were built under the guidance of architects brought by St. Augustine; those in Northumbria with the help of masons from Gaul. Many had square towers, and the usual plan was a small-scale basilica with nave, apse, and lateral porches or transepts. Smallness and crude workmanship are typical of the early Saxon style, but the superior buildings erected just before the Conquest probably owe their existence to the more stable conditions in Europe following the coronation of Charlemagne in 800. Some of these are at Eltham in Norfolk, Peterborough and Glastonbury, Wing in Buckinghamshire and Worth in Sussex. All but the last two are in ruins.

Literature.

During the early Saxon period there existed in the monasteries of the British Isles a higher culture than anywhere on the continent of Europe. Christianity had made progress in Britain many years before its adoption by the Roman Empire early in the 4th century, but its organisation copied from the monks of the Egyptian desert was based on the monastic community rather than the bishopric. We have seen that Eastern ritual and forms of art were brought to Britain with this movement, and so too were the classics, the study of which was encouraged in centres in Wales (Caldey Island) and Scotland (Withern in Galloway), from which it spread to Ireland. There were therefore several literary traditions in Britain at this time: the native Celtic in Ireland and Wales; the Latin of the monastic communities; and the Anglo-Saxon.

In Wales and Ireland Christian influences mingled with the old pagan ones more smoothly than elsewhere and produced a remarkable literature, dating from the 7th and 8th centuries, but with its roots in the prehistoric past. A notable example is the Irish prose epic the *Tain Bo Cualgne* about a society resembling that of the Homeric world. At much the same time the Arthurian tales must have been circulating in Wales, and the Norse sagas were being told, but since they were not written down until rather later they will be mentioned elsewhere.

Anglo-Saxon Literature. Anglo-Saxon, although the predecessor of modern English, cannot be read without making a special study of the language. Its copious literature ranges from the sea-poetry of *The Wanderer*, the battle-poetry of *The Battle of Maldon*, the epic poetry of *Beowulf*, and the religious poetry of *The Dream of the Rood* to historical works and translations from the Latin. The 8th-century *Beowulf*, a great work of English literature written by an unknown author, tells of the deeds of the hero Beowulf and of his death. It is full of the haunting sense of tragedy and mystery so typical of Anglo-Saxon works. Bede's (673–735) *Ecclesiastical History* and other works give a valuable account of the early history of the country, and the *Anglo-Saxon Chronicle*, commissioned by King Alfred, records the history of Wessex and his wars against the Danes. Alfred himself translated Latin works into the vernacular, and in this way such writers as Bede (who had written in Latin), Boethius, St. Augustine, and Pope Gregory became available to those who did not know Latin. The poet Caedmon, a cowherd in Bede's monastry in Yorkshire, wrote the *Song of Creation*, of which only a fragment remains, and *The Dream of the Rood*, possibly by Cynewulf of Northumbria, is another great landmark in English literature.

Early Mediaeval Latin Literature. Throughout the Middle Ages Latin poetry continued to be written in the monastries, and thus, whilst the ordinary man rarely moved more than a few score miles from his birthplace, the monkish scholar could travel without let or hindrance from one country to another using the common tongue of Latin. He was a member of a commonwealth in which national boundaries were of little significance. The poetical tradition, as Helen Waddell's *Mediaeval Latin Poetry* shows, can be traced in almost unbroken line from Petronius—who was, of course, not a Christian. Alcuin (d. 804), a Yorkshireman, St. Columba of Donegal (d. 597), and many others who remained anonymous were amongst the Britons who contributed to this tradition. Alcuin became tutor to Charlemagne and played a considerable part in the spread of learning throughout the Frankish Empire.

Amongst the influential thinkers and prose writers in the 6th and early 7th centuries were Boethius (d. 525), Cassiodorus (d. 583), Isidore of Seville (d. 636), and Pope Gregory the Great (d. 604). Boethius, born in Rome and possibly a Christian, was sentenced without trial and put to death by Theodoric the Great on false charges of treason; his book *The Consolations of Philosophy* written whilst awaiting his death is perhaps the only work of this time which is still read. Cassiodorus was a statesman and scholar who held high office under Theodoric and his successors and founded a monastery at Vivarium in southern Italy, where he and his monks strove to ensure that ancient learning was preserved and transmitted. Isidore of Seville, a bishop and the author of the *Etymologies*, once as influential as the *Encyclopeadia Britannica*, was an important figure throughout the Middle Ages, although his assumption that phenomena could be explained by understanding the derivation of their names was obviously absurd. Pope Gregory's many works on theology were fundamental in the Church until the writings of Aquinas.

The Conflict Resolved: Romanesque Art.

Later Celtic art shows how an austere and abstract peasant style mingled with the passionate emotionalism of the desert fathers of North Africa to produce something new in European art. This was an element which could have come neither from Rome nor Byzantium; for it increasingly represented real people with real feelings. Classical art of course did not ignore the emotions, but it generalised them to express emotions common

to all men rather than one particular man's feelings at a particular moment of time. Byzantine art, too, was emotional but excited the observer by the use of vivid colours rather than by anything personal in its stylised figures. It is a curious fact that moving back in history seems to take one even further from the appearance of the historical Christ—Christ the poor man who walked the dusty roads of Galilee. In the catacombs He is represented in the symbolic form of a fish because the five letters of the Greek word *icthus* (fish) are the first letters of the Greek title "Jesus Christ, the Son of God, Saviour," and in early Roman and Byzantine pictures He is shown as beardless—an Apollo far removed from the Man of sorrows of the Bible. Contrast with this the relief on a bronze door of the church at Hildesheim (*c.* 1000) which shows God confronting Adam and Eve after the Fall. The tree and the serpent are unrealistic, mere shorthand symbols, and the figures of Adam and Eve show no classical beauty but rather the bowed posture of two wretched human beings. Adam points to Eve and Eve to the serpent. Before them stands the awful figure of God pointing an accusing finger at both. There is nothing symbolic or "artistic" here, but a terrifying reality produced by an artist who was not primarily concerned with beauty but with teaching a lesson.

In manuscript painting the original formality and abstract patterns gave way to a more personal and emotional art in which the scrolls and intertwining lines were used to heighten intensity of feeling. St. Matthew with a formal halo round his head and the appearance of a Roman senator in his toga becomes in later representations an excited man without a halo but with large hands and prominent eyes bending over his script to write the Gospel. The hair and the folds of the robe are represented in zig-zags and scrolls to increase the impression of excitement. As E. H. Gombrich says, the new mediaeval style "made it possible for art to do something that neither ancient Oriental nor classical art had done: the Egyptians had largely drawn what they *knew* to exist, the Greeks what they *saw*; in the Middle Ages the artist also learned to express in his picture what he *felt*." In the secular field, the famous Bayeux Tapestry conveys the same impression of an art, not always brilliant and often naïve but nevertheless capable of conveying a message dramatically and with the utmost economy of means. The Tapestry is a piece of embroidery, stitched instead of woven, as true tapestries are, and depicts the events of the Norman Conquest; it is 231 feet long and 20 inches wide and was probably made in Kent at some time about 1080. The original is in the town of Bayeux, but a representation can be seen in the Victoria and Albert Museum in London.

Romanesque Architecture.

Romanesque architecture, known in Britain as Norman, can only be understood against its social background. First, the Church was still militant; secondly, it was primarily a rural Church, since there were few large cities; and thirdly, those who built the churches in northern Europe were men who knew Roman designs but had largely lost the Roman skills in building. Romanesque churches therefore tend to be small and simple; they have heavy walls and little ornamentation; the windows are tiny, and the church looks best from a distance. (The novice may conveniently think of Romanesque buildings as horizontal in the sense that they would fit very nicely into a series of parallel straight lines; of Gothic as vertical; and of Byzantine, with their domes and rounded arches, as circular.) It was in north and central Italy that the Roman basilica developed into the cross-shaped Romanesque church. Side-aisles became more solid to support the weight of a stone roof which had replaced the wooden one, and for the same reason more complex systems of vaulting were devised with great pillars and rounded arches to take the strain. Latterly the roof was almost wholly supported by these pillars and would have remained in position had the walls disappeared and the apse opened up into a varying number of chapels. The term "Romanesque" was devised just over a hundred years ago by de Chaumont to describe the architecture of Europe between the time of Charlemagne and the rise of the Gothic style towards the end of the 12th century and of course implies an art which developed from that of the Romans. But the Italians never regarded Gothic highly and Romanesque churches continued to be built there until the beginning of the 15th century although in a modified form.

Some of the most interesting Romanesque churches can be seen at Pisa with the "leaning tower" (11th century), Florence (where the 11th-century San Miniato, based on the basilica model, is rectangular instead of cruciform), Lucca (12th century), and Milan (the 12th-century San Ambrogio, most famous of all Italian Romanesque churches). At Verona is the church of St. Elmo, at Pavia, San Michele, and further south in Italy and Sicily the Romanesque style blends with the Byzantine and Lombard. The most purely Roman churches are in Provence at Arles, Toulouse, and Vezelay, and the most purely Lombard (outside Pavia) are in Normandy. Germany has Romanesque churches in the valley of the Rhine at Speyer, Mainz, and Cologne, which possesses both St. Maria-im-Kapitol and St. Cunibert, the latter showing Moorish and Byzantine influence. In Spain the most famous church is Santiago de Compostella, one of the great shrines of the Middle Ages; elsewhere in that country the Romanesque style was overwhelmed by the Moorish.

English Romanesque. By the 11th century the Normans had settled down in the north-west of France and in 1066 they brought to England their own version of Romanesque. Already they had built churches at Jumièges and Caen and the results of this experience can be seen at Durham (begun 1093), Ely, Winchester, and elsewhere. It must be remembered, however, that very few old churches retain their original form; when they were not destroyed, they were rebuilt or added to, and at various periods donors added chapels, tombs, or rood screens in the style of their time. Nevertheless, the main characteristics of the Norman version of Romanesque remain: round arches, massive cylindrical columns, thick walls (although both columns and walls were often hollow shells filled inside with rubble)—and always the basic pattern of the square and the circle. Some churches were wholly circular, as the Temple Church in London or the chapel at Ludlow Castle. Early roofs were flat, but in the High Romanesque style of Durham rib-vaults were used in which arches based on pillars crossed each other and the intervening triangular spaces were filled in with light material. The rib-vaults of Durham's choir (*c.* 1104) are the earliest in Europe, although their designer was obviously not fully aware of the possibilities of the new technique.

A high square tower with thick walls and narrow round-arched windows is the essence of the Norman castle. Around this keep a wall enclosed a large space towards the front known as the bailey; here attackers could be seen, if they had penetrated so far, and shot down. Beyond the wall there might be a moat or ditch. In these places lived Norman lords in such luxury as could be provided by tiny unglazed windows, cold stone walls covered with tapestry, and the wind and smoke from an open fire. Since castles and palaces were liable to be destroyed, few remain; the Wartburg in the Black Forest is one of the rare Romanesque palaces.

Decorative Features. Late innovations in the Romanesque style were the Norman discovery of the rib-vault mentioned above and the increasing ornamentation of churches in France. One of the best examples of this is the façade of St. Trophime at Arles (*c.* 1180) illustrating Christ in glory surrounded by symbols of the four Evangelists in the tympanum or space above the doorway. Lower down are the twelve apostles, a row of the damned in chains on Christ's left, and a row of the blessed on His right. On either side of the door are figures of the saints to intercede on behalf of the faithful at the Last Judgement. The figures are

ponderous, but to the illiterate masses of the times they provided a graphic summary of Christian teaching. By the middle of the 9th century Oriental motifs had become popular following the establishment of friendly relations between Charlemagne and Harun-al-Rashid the Caliph of Baghdad; these basically Persian designs were copied from imported carpets and tapestries.

MUSIC.

This is a convenient point to say something about the beginnings of music, including Oriental music, although the latter properly belongs to that part of the section dealing with the arts of the Orient. Music must be one of the earliest arts related as it has always been to movement—the dance is one of the most natural forms of self-expression and the dance is inconceivable without rhythm. So, too, it must have seemed natural to relieve the tedium of work with songs which were related to the movements involved, as is done in the Hebrides and elsewhere to this day, and the war-dance had the very practical function of arousing the emotions of the warrior. But of the very earliest music we know little. When people became literate, their writings tell us (as in the Bible) what instruments were used, but we do not know their melodies, since until quite a late period in human history there existed no true form of musical notation. As a matter of fact, we do not really know how Bach's music sounded only ten generations ago, and while we can listen with pleasure to the plays of Sophocles or Aristophanes, it is likely that Greek music would seem a poor, thin affair today in spite of the importance attached to it by Aristotle and Pythagoras.

The musical instruments used by most civilisations since early days have been percussion (drums, bells, or cymbals, and a primitive type of xylophone); wind instruments such as the pipe or flute, and such stringed instruments as the harp or lyre. The trumpet was used quite early too, but because of its limitations was more often used for ceremonial occasions than for producing music.

Western Music.

Greek music, and indeed European music for many centuries after, was monodic, that is, all voices and instruments produced the same tune and there was no harmony or counterpoint as we understand the terms. Although the Greek philosopher Pythagoras had found that the fourth and fifth notes within an octave would make a harmonious sound together with the fundamental, his discovery was not put into effect until hundreds of years later when it became the basis of the theory of Western music.

European music progressed from the monodic to the symphonic when the Roman scholar Cassiodorus (*c.* 477–*c.* 570) showed that it was unnecessary for all to sing either the same tune or for men and boys (*i.e.*, basses and tenors, or altos and sopranos) to sing an octave apart, that fourth and fifth intervals, as Pythagoros had demonstrated, were also convenient and pleasing to the ear. So, about the 9th century, a type of group singing known as organum (organised music) was introduced in which the voices moved in parallel, note for note, at the musical interval of a fourth and a fifth. Still later, but for the first time in the 11th century, melody in counterpoint was introduced when the original plainsong melody was accompanied by simultaneous voice parts, each independent but linked by strict rules of harmony.

In early times the Church had disapproved of music as a trivial form of folk-art, but later it had to capitulate and by the 13th and 14th centuries such composers as Guillaume Dufay (a Netherlander in the Pope's service) were introducing popular music in the form of the motet in which the tenor (Latin *tenere* = to hold) maintained a melody whilst two or three voices wove variations about it. Martin Luther in the 15th century wrote of this type of polyphony (many-voice music): "Is it not remarkable that one voice can sing a simple tune while three or four others, singing along, joyfully enfold this simple tune, playing and leaping around and embellishing it wonderfully." One of the earliest compositions of this type still known to us is *Sumer is icumen in*, written by a monk of Reading in the mid-13th century. By the beginning of the 14th century the Ars Nova (new art) was being introduced which brought in faster tempos and new harmonies and paved the way for the full flowering of the Italian madrigal. Popular music, too, as sung by the minnesingers of Germany and the troubadours of France, advanced in spite of the disapproval of the Church, and the greatest composers were Flemish and French. Josquin des Prés (1450–1521) was admired even in Italy and approved of by Martin Luther, who himself composed hymns which became the foundation for much of the music of J. S. Bach almost exactly two centuries later. Josquin's pupil Adrien Willaert (1480–1562), born in Flanders, was the founder of the Venetian School and directed the music at St. Mark's, where he developed the madrigal and introduced antiphonal singing for divided choirs, each in one arm of the cross-shaped cathedral. Gabrieli (1557–1612) brought instrumental music to the fore with his compositions for brass, and with Palestrina (1524–94) we enter the field of modern music.

Musical Notation. By the 6th century there existed a large body of music handed down from many sources and maintained in the monasteries. It was this that Pope Gregory the Great caused to be written and codified so that the Gregorian chant became the musical core of all Catholic services (as to a lesser degree it still is). The eight Greek modes were still used, but notation was unsatisfactory, melody being indicated either by letters—a b c d e f g—above the words or by neums, a kind of musical shorthand peculiar to each choirmaster. Gregory, however, had made a beginning in musical notation—and in order to forestall those who are going to say that someone else devised a system of notation in Babylonia centuries earlier, let us say that Gregory certainly did not cause musical notation to be invented, but "Gregory" is the name we are going to give the person who did. Gregorian chants are sung today, Babylonian ones are not. The modern type of notation written on parallel lines was devised shortly after Gregory's time by Guido (*c.* 990–1050), a Benedictine monk and teacher of music of Arezzo in Tuscany.

Oriental Music.

Music in the Orient is based on entirely different values from our own. In China, for example, the pentatonic scale was used (based on our c, d, e, g, a). This, incidentally, is still the basis of Gaelic music in Scotland and Ireland. In India the octave is divided into twenty-two intervals roughly approximate to quarter-tones. In Oriental music in general the emphasis has been on melody and rhythm, while harmony, and counterpoint, which have been characteristic of European music since the Middle Ages, are little heeded. Therefore, although Indian and Chinese music shows great sophistication in its own way, it is not readily appreciated by most Europeans. But Oriental music differs from European in even more profound ways. It has no composers or compositions. Professor Mukerji, in his book *Modern Indian Culture*, states: "Of composers in the European sense, *i.e.*, as a class of artists whose function is not execution, we have had none." A piece of music is a set of variations on a traditional theme and even its execution depends on the mood of the performer, a particular event, or the time of day. The ability of the performer counts for little, and Rabindranath Tagore goes so far as to say: "In India, any finesse in singing is regarded with contempt; singers are not ashamed if their top notes are cracked, their bass notes unnatural, their gestures violent. They take it to be their sole function to display their mastery over the forms and formalities of classic tradition."

So, although we can readily appreciate Chinese painting or pottery, the translation of a Chinese

poem, or Indian philosophy and architecture, we cannot so easily understand or assess Chinese or Indian music. Yet music has been treated as a serious art form by its performers, and under the T'ang (618–907) and Sung (960–1297) dynasties in China—the golden age of Chinese music as of Chinese art—there were orchestras of as many as three hundred players, as well as chamber music and a kind of opera.

Oriental music, as such, has had little influence on European civilisation, but Greek and Hebrew patterns have influenced our religious music (the Gregorian chant), and it is obvious to any visitor to Spain that Islamic patterns have had a profound effect on Spanish music.

This very brief introduction may suggest three points: first, sophisticated music was the latest to develop of all the arts; secondly, that although men must have been singing and playing musical instruments for many centuries their music (largely improvisation upon the theme as in the East today) remained unwritten and did not become till much later pleasing to the modern ear; thirdly, that a major part in creating music, as we understand it, was played by the peoples of northern Europe. The period we shall discuss later was one in which the art of the Gothic "barbarians" was supreme and Italy became the pupil.

II. GOTHIC ART OF THE MIDDLE AGES.

Architecture.

Doubtless there are still those who think of the Gothic style as springing out of nothing, as imitating the dark forests of northern Europe, or as demonstrating a new level of spirituality. But new styles in architecture do not come about in this sort of way, for money and knowledge come first, the essential inspiration later. As we said, Romanesque churches were built by predominantly rural communities with little money, and those who built them were only beginning to learn how to support a heavy stone roof without equally heavy walls. Gothic churches were built in the new cities by wealthy communities and by architects who had learned from the experience of late Romanesque times how to support the roof by means of pillars and arches. Gothic was a logical development of the late Romanesque style although one which was little appreciated by those who lived south of the Alps. Vasari, one of the best pupils of Michelangelo, had this to say about it: "These Goths, untutored in the true classics, have evolved a style of their own which is a mere hodgepodge of spires and pinnacles and grotesque decoration and unnecessary details which are completely lacking in the simple beauty of the classical world." To the peoples of southern Europe the Goths were a horde of savages who had destroyed the perfect unity of ancient times; north and south, classical and romantic, are divisions which even today separate the art of one part of Europe from the other.

Gothic art developed during the second half of the 12th century when Norman and Romanesque buildings began to appear clumsy and obsolete in spite of their new and more elaborate ornamentation and new ideas of vaulting. The Crusades were coming to an end; the Moslems were no longer troublesome except in the east; the Normans had settled down and ceased their raiding activities; wealth was increasing; cities were developing, and land was becoming dearer. As in modern New York, it paid to build upwards, to plan vertically rather than horizontally. Gothic architecture was not created *because* new techniques in architecture made walls relatively unimportant, *because* there was more money, *because* cities had to be limited in size, or *because* the times were more settled—but these were the indispensable conditions without which it could not have existed at all.

We have seen how the rib-vault was used at Durham. Both nave and aisles were divided into rectangular bays, at each corner of which pillars supported transverse, diagonal, or longitudinal ribs to form a framework on which a light roof was built. The ground-plan of the church resembled a cross-word puzzle with a pillar at the corner of each square, and the main weight of the roof was carried by pillars and vaulting instead of by the walls. Thick walls became unnecessary and large windows with elaborate stained-glass designs could replace the small ones. But these were possibilities which were not exploited by the Romanesque architects and the new technique was brought to perfection only in Gothic buildings. The pointed arch was not used in Romanesque at all and came, as we have seen, from Islam. It had two important advantages: first, it exerts less sideways thrust than the rounded one; secondly, it causes the height of the roof to become irrelevant. The round arch, being a portion of a semi-circle, must always have a height which bears a fixed relationship to the distance between the walls supporting it, so that walls 30 feet apart must support an arc whose radius is 15 feet. Romanesque churches always looked horizontal because a high roof would have been weighty and its supporting columns set too far apart. The Gothic church made use of light materials to fill in the triangular spaces between the ribs of the roof, could afford to be indifferent about height or width, and could neutralise whatever thrust the pointed arch exerted upon its walls by means of flying buttresses. Buttresses propped up the walls of a church in the same way that poles set at an angle prop up the walls of old barns in Germany or Switzerland today.

National Characteristics. Gothic architecture first developed in the area around Paris. Churches showing both Romanesque and Gothic features are said to belong to the early or transitional period. Such buildings include the cathedrals of Chartres, Laon, and the Benedictine church of St. Denis just north of Paris—the first of the large Gothic churches. The transitional period ended at some time about 1200, and the following century was perhaps the greatest; for during the reign of Louis IX (1226–70) the cathedrals of Rheims, Notre Dame at Paris, Beauvais, and Amiens were built, as was the lovely Sainte Chapelle not far from Notre Dame. From France the style spread to other lands, in each of which it developed its own characteristics. Thus English Gothic churches tended to have massive towers and graceful spires, and, as at Salisbury, were often set in open ground with lawns. Flemish and Dutch churches were built of brick, whilst the German cathedrals of Strasbourg and Cologne followed on the whole the French tradition, although Cologne, begun in the 14th century, was not finished until as late as 1870. Italy resisted Gothic ideas, but the cathedral of Milan, begun in 1386 but only finally completed in 1813, is mainly Gothic-style and highly decorated, and in Spain Gothic fused with Moorish to produce strange variations on the original. The Gothic style was not, as is sometimes supposed, a style designed entirely for religious purposes; for city walls, gates, castles, town halls, and private houses were also built in the Gothic manner. The Gothic town halls of Ypres and Ghent and the castle in Ghent are good examples, and in Bruges streets of Gothic houses are still used today.

Early English Gothic. In this country, too, Gothic was initially regarded as a term of abuse, and Evelyn described it as mere "congestions of heavy, dark, melancholy and monkish piles, without any just proportion, use or beauty." The various styles of Gothic were detailed in the early 19th century by Thomas Rickman, who devised such terms as Norman, Early English, Decorated, and Perpendicular, but it is now convenient to speak simply of Early Gothic as lasting to 1350 and Late Gothic which persisted up to the Renaissance. The Black Death of 1348 forms the dividing line and leaves two centuries on either side for each period. Gothic was found in most countries where the Roman Church was supreme, but not in Russia or the Balkan countries, where the Greek Church was in power; in Italy it never became important, since the classical tradition always prevailed and the classically based Renaissance was enthusiastically accepted there more than a hundred years before it made much

impression elsewhere. Gothic is essentially a French style, and it is not too much to say that the cathedrals of Germany and Spain are on the whole inferior examples of French originals. Even their architects might be French; for, contrary to popular belief, many mediaeval architects are known by name, and sometimes their drawings have survived. They were usually laymen rather than clerics.

The main English Gothic cathedrals were built somewhat later than the French ones (although of course a church might be in the process of building for centuries). Thus Lincoln choir and apse were begun in 1192, Salisbury about 1220, and the west front of Wells slightly earlier; York transepts date from 1230, the nave from 1291. Westminster Abbey choir and transepts (1245–69) belong to an earlier period than the nave which, however, is more or less in the same style. In addition to the differences already mentioned, English Gothic cathedrals tend to be narrower, longer, and lower than their French counterparts; they often have cloisters (since many English cathedrals were built as monastic churches); they have single aisles without side chapels where the wider French ones have double aisles with chapels; they have a single large tower or up to three smaller ones whilst the French may have as many as seven or nine; and they are more elaborate in the matter of interior decoration. Throughout the centuries Gothic walls and roofs became progressively lighter. This development can be observed when one compares the solidity of an early Gothic building such as Salisbury Cathedral with the elaboration on a later one such as the chapel at King's College in Cambridge. With less wall-space buttresses became larger and bolder, often with pinnacles which (as Martin Briggs points out) were not put there to point the way to Heaven but to provide additional strength in pressing down the structure carrying the roof. A parallel development was the increase in window-space, partly because the possibility existed, partly to give more light and to provide a field for the expert in stained-glass work. Nevertheless, most of the 13th-century windows were filled with the greenish-grey *grisaille* glass still seen in the Five Sisters window at York Minster. The details cannot be discussed here, but colour and light came in as stonework grew less; plate-tracery gave way to geometrical tracery, and geometrical tracery to the more elaborate curvilinear form. Many of these techniques came, as had the pointed arch, from Islam. Stained-glass windows told the story of the Bible, as did the wall and roof-paintings at St. Albans and elsewhere. For there were still many illiterate people who, like the mother of Villon, found in the windows of their parish church "a painted Paradise with harps, and Hell where the damned souls are boiled: one gives me joy, the other frightens me." This was where the poor and ignorant learned their theology even in the 15th century.

Late English Gothic. We are taking the time of the Black Death (*c.* 1350) to divide early from later Gothic, and it only remains to mention a few of the early secular buildings, notably Markenfield Hall near Ripon (*c.* 1310), the fortified manor-houses of Oakham and Stokesay, and Little Wenham Hall in Suffolk (late 13th century), all of which are in the same style as the cathedrals. On the continent, Prague has a synagogue (*c.* 1316) which is pure Gothic. Later Gothic in England is mainly non-monastic and it is no accident that three of our finest buildings are royal foundations testifying to the decline of priestly power and the immense increase of secular power in the time of Henry VII. These are Henry's Chapel at Westminster (*c.* 1500), St. George's Chapel at Windsor (1481–1537), and King's College Chapel at Cambridge (1446–1515). From about 1540, the time of the dissolution of the monasteries, there are no important churches until the Great Fire of 1666 brought about Wren's revival of church-building in the Renaissance style.

The so-called Perpendicular style is peculiar to England and found nowhere else, but the flamboyant architecture of the late 14th century in France is so similar to the English Late Decorated of almost a century earlier that the two must be connected. In fact, since such places as Rouen and Abbeville exemplifying the style were at that time under English rule the possibility becomes a certainty. The best-known building in Perpendicular is the mid-14th-century Gloucester Cathedral and the Late Decorated English style can be seen in such small forms as the Easter Sepulchres of Nottinghamshire, the Percy Tomb in Beverley Minster, some tombs in Westminster Abbey, and the church at Heckington in Lincolnshire—the finest Late Decorated building in Britain. The great east window of Gloucester is still the largest in the world. Timber roofing was also typical of late English Gothic, which in this respect often surpassed many of its continental counterparts. Carved angels, wooden tracery, and heraldry as seen in Norfolk were used to enhance the appearance of these roofs. In secular art Stokesay Castle (*c.* 1250) and Penshurst Place in Kent of more than a century later brought about an advance in comfort unknown to the Normans. Apart from dwelling-houses we have the late Gothic buildings of Winchester and Eton and several of the oldest colleges at Oxford and Cambridge, all dating from the beginning of the 15th or the end of the 14th.

Gothic Sculpture and Painting.

By the 13th century France was the richest and most important country in Europe, and the University of Paris was its intellectual centre. The great Gothic churches were being built and imitated in Germany and England. New ideas in sculpture and painting came from the new style and work was increasingly done from nature. But in Italy churches were still decorated in the old tradition derived essentially from Byzantium and Paris was ignored. The essence of Gothic art was naturalism; it expressed feeling. It was not realistic in the Greek sense, where a careful study of the proportions of many athletes decided what was "real," and it was not always realistic in being anatomically correct. Statues in churches might be elongated to fit into Gothic niches, but they represented people who might be seen in the streets, whereas earlier artists had depicted saints, generals, or politicians according to the popular belief of how such characters were supposed to appear. In early Christian art the scenes of the Nativity, Crucifixion, and Resurrection were familiar, and the characters depicted were known by special symbols; Peter bore the keys, Paul, a sword, and Mary Magdalene a jar of ointment. A king had a crown and sceptre, a bishop a mitre and crozier. But they were not real people and might even have their name written beneath their picture to make sure there was no mistake. The earlier artist learned from his teacher how to depict certain stock types and a carefully handed-down method of doing so.

Giotto: A new era in art.

Italian painters and sculptors were late in accepting the lessons of the Gothic miniaturists, who, from the time of the Book of Kells (an 8th-century Irish Gospel) had become increasingly naturalistic in their treatment of animals, plants, and trees, and the lessons of the early Gothic sculptors whose work, although stiff in superficial impression, nearly always shows in the face a certain gracious naturalism. The Greek—that is, the Byzantine manner—was still used in the mosaics of 13th-century Italian churches. Nevertheless, Byzantine art had taught the Italians much about technique, especially about the principles of light and shade (chiaroscuro). So it was a great Florentine painter, Giotto di Bondone (1266–1337), who under his master Cimabue (d. 1302) was able to bring together these two traditions. Giotto was also a sculptor and played the major part in making Florence the centre of a new Gothic sculpture and painting. In one sense he was the *first* artist—*i.e.*, the first to be accorded public acclaim as a genius rather than as merely a craftsman. Of Cimabue almost nothing is known save that he was mentioned by Dante and painted some of the frescoes in the church of St. Francis at Assisi, where the rest were completed by

Giotto. (A fresco is made with coloured distemper paints which are applied to a wet surface and therefore becomes in effect an integral part of the wall to endure as long as the wall itself.) Representations of the saint were particularly suited to a naturalistic treatment, since Francis had been known as a man who had really moved about the villages of Umbria, and the twenty-eight frescoes proved in this way a revolution in the history of art. *St. Francis Preaching to the Birds* is one of the best-known, but doubtless his greatest work is in the Arena Chapel at Padua and at the Bardi Chapel of the Church of Santa Croce in Florence. The lower part of the campanile of the Duomo in Florence together with the sculptured panels were completed from his designs before his death.

In Siena, the rival at that time of Florence, the style of the northern artists had aroused interest, but not to the extent of breaking so violently with the Byzantine forms as had Giotto. Duccio, contemporary with Giotto, tried to modify the old art in the new direction, and the altar-panel of the Annunciation painted for Siena Cathedral in 1333 by two younger masters of his school, Simone Martini and Lippo Memmi, shows how successful he was in its lovely combination of naturalism and formalism.

Sculpture in Italy was also influenced by the new style. It can be seen in the carvings on the pulpits in the cathedrals of Pistoia, Siena, and Pisa carried out by the two Pisanos, Niccola and Giovanni (father and son), which are Gothic in spirit, and in the bronze doors with scenes of the life of John the Baptist of the baptistery in Florence by Andrea Pisano (d. 1348). The latter show the simplicity and avoidance of overcrowding which he must have learned from Giotto. It is also thought that the reliefs on the lower part of the campanile may have been executed by Andrea Pisano from the designs of Giotto.

But the inherent Italian suspicion of the northerners was such that on the whole Gothic influence declined after the death of Giotto. For a century, although the new style remained it did not fructify. Gothic sculpture too declined after the death of the younger Pisano in 1330.

Flemish Painting.

On the other side of the Alps revolutionary developments were being made in Belgium by Jan van Eyck (*c.* 1390–1441), who, with his brother Hubert, made religious miniatures which, as they became larger, showed a gradual transition from the art of the miniaturist to that of the painter. To Jan van Eyck, rightly or wrongly, is ascribed the discovery of oil painting which is used in his huge altar-piece with many scenes in the cathedral of Ghent. The subject is the adoration of the Lamb, Who, standing on an altar, is surrounded by worshipping saints and pilgrims. Although at first sight the style of this great work appears not very different from that of the miniatures of a generation earlier in its love of detail, its gay colours, and crowded figures, we soon see how the landscape in the background is a real, not a schematic one and the figures in the foreground are real people. Van Eyck did not break completely with the older traditions, but he developed them to such a pitch of perfection that the ideas of mediaeval art were left behind.

The use of oil made it possible to take more time over a painting, since it dried less quickly than tempera, made painting more accurate, and made it easier to shade off one colour into another. Some of van Eyck's greatest works in the new medium were his portraits, one of the most famous of which is *The Betrothal of the Arnolfini* (1434) in the National Gallery of London. Two other great Flemish painters were Rogier van der Weyden (d. 1464), best known for his *Descent from the Cross* in the Escorial near Madrid and Hans Memling (d. 1494), last of the great mediaeval Flemish masters. Memling's typically sentimental angels can be seen in the paintings for an altar at the Antwerp Museum.

At the same time Flemish sculpture was flourishing, although it has never been as well known as Flemish painting. Chief amongst the sculptors was Claus Sluter (d. 1400), who worked at Dijon, where he was associated with the court of the Dukes of Burgundy, as van Eyck had also been. His masterpiece is the six-sided Moses Fountain, once the base of a large crucifix, at Champmol near Dijon; each side is carved with the figure of a prophet which in its passionate emotionalism differs from the more stiff and rigid figures of the Gothic cathedrals. They are realistic, and it is likely that Sluter had gone to the ghetto to study Jewish types from life. The Tomb of Philip Pot in the same area by an unknown Flemish artist is another remarkable work.

Mediaeval Literature.

The early Middle Ages was a time of supreme importance in European literature. Latin was still used in the churches or by scholars, but elsewhere it was breaking down into the Romance languages and the spoken languages of the Germanic, Slavic, and other peoples were being put into written form. The literary tongues of modern Europe were being born. Of course, the classical Latin of Cicero had never been spoken by more than a relatively small number of people even within Italy, and ordinary men used the Vulgar Latin, which now began to emerge as French, Spanish, and Italian. The Germanic languages of Britain, the Low Countries, Germany, and the Scandinavian lands became literary during the first half of the Middle Ages, and we have mentioned the Celtic writings of about the same period. Much of this literature was secular and popular—a putting down of old tales and legends previously passed by word of mouth as the Homeric epics must have been, and they were usually anonymous. The French *Chanson de Roland* (*c.* 1100), tells how Roland under Charlemagne attempted to recover Spain from the Moors; *Poem of the Cid*, the first great poem in Spanish, written by an unknown author a few years later, deals with the same struggle. These are examples of the *chansons de geste*, the battle-tales of the warriors of the 10th to the 12th centuries, and are among the great literary works of Europe.

In a different tradition but of the same period are the Scandinavian sagas and eddas (the former dealing with men, the latter with gods and heroes); there are many of these, mostly anonymous, but the *Heimskringla* saga is by Snorri Sturluson and gives an interesting picture of the Viking raiders and their voyages.

The epic in France and Spain soon decayed, and by the 12th century its successor, the courtly romance, was beginning to appeal to the more settled society of the age of chivalry. These heroic, fantastic, and sentimental tales dealt with the theme of romantic love—a theme which had not occurred to the earlier warriors—by drawing on classical sources or on ancient tales. Chrétien de Troyes (*c.* 1170) used Celtic stories of King Arthur first mentioned in Geoffrey of Monmouth's *History of the Kings of Britain.* He is the best known of these story-tellers, but we can see how, as it developed under his hand and those of other French and German writers, the legend changed from its more primitive form into accounts of knightly chivalry and courtly love far removed from the moral outlook of the old tales. The related Celtic love-theme of Tristan and Iseult was also used by Chrétien and in Germany by Gottfried von Strassburg (*c.* 1200) in his *Tristan.* The *Nibelungenlied* is an anonymous German heroic epic based on pagan tales of the adventures of Siegfried of the Netherlands. All these old themes have been used throughout the centuries as a kind of background in European culture from early days to Tennyson, Wagner, and Cocteau. It remains to mention *Aucassin et Nicolette*, a great anonymous 13th-century French romance; the fables (*fabliaux*), also of the 13th century, which originated in northern France and were popular amongst the burghers of the new towns; the satirical beast tales such as Reynard the Fox; and the Goliardic songs with a pagan touch of

which the best-known is the famous *Gaudeamus Igitur* still sung by students.

Troubadours and Minnesingers.

We mentioned earlier the Latin lyrics, which range from the sacred to the profane, from Petronius and Boethius to Bernard of Clairvaux and Peter Abelard. Many are anonymous, but some of our present-day hymns are translated from these lyrics. Thus "Jesus, the very thought of Thee" is sometimes attributed to Bernard of Clairvaux, and "Jerusalem the Golden" to Robert de Morlaix (although the *Sabbato ad Vesperes* of Abelard seems to be much the same poem). However, the first great body of lyric poetry in the vernacular dates from the beginning of the 12th century. It was the poetry of the troubadours.

This poetry has an extraordinary history, rising as it did in Provence quite suddenly and dying out equally suddenly with the Albigensian Crusades of 1207 when Pope Innocent III carried out his terrible butcheries. Its origins owe something to folk-poetry and to the Latin lyrics, but most of all to eastern forms borrowed from the Hebrew and Arabic poems of southern Spain or brought from the Middle East during the Crusades. The first known troubadour was William, Count of Poitiers (1071–1126), but many know also of Richard Coeur de Lion's activities in this direction. This type of song (for it was accompanied by music played on a lute by the low-born jongleur) was carried by the highly-born troubadours from France to Italy and Spain, and in Germany the equivalent of the troubadour was the minnesinger. Their songs told of courtly love, of the love of the minstrel for a lady, of her scorn, and of his undying affection; in the Moorish tradition, nightingales, roses, and other symbols of the type one knows from Persian verse were common. The German songs are characterised by a more human approach; for the first time we get *Liebe* or ordinary love replacing the courtly type. The greatest German poet in the minnesinger tradition was Walther von der Vogelweide (*c.* 1170–1230). Strangely enough this wonderful German lyricism disappeared and there is hardly any German lyric poetry of any significance between the 13th and the 17th centuries. All this, obviously, is vastly oversimplified; for although *Aucassin et Nicolette* has been named and *Le Roman de la Rose* by Guillaume de Lorris influenced Chaucer and both of these were part of the fine literature of northern France in the 13th century, we have no space to tell how the courtly poets of Galicia in Spain using a dialect now known as Castilian caused this to become the accepted Spanish of today.

The Range of Mediaeval Experience.

The later Middle Ages produced many great men, but here we are only concerned with literature and art. So we must leave out Albertus Magnus, the Bavarian Dominican philosopher, who was one of the founders of modern science, Roger Bacon, the Englishman, who rejected belief in authority in science in favour of observation, Thomas Aquinas of Naples, the founder of modern Catholic theology, and the tragic and brilliant Peter Abelard (except for his hymns, already mentioned). But we must consider Dante Alighieri (1265–1321) of Florence, Geoffrey Chaucer (*c.* 1343–1400), and his later contemporary, William Langland.

Dante and Giotto belonged to the same city and lived at the same time, but Dante spent many years in exile in northern Italy; he was undoubtedly the greatest writer of mediaeval times, representing the very spirit of the era. His first important work, the *Vita Nuova*, is about his platonic love for Beatrice, who came in his mind to represent an ideal of perfection. She was his "Lady Philosophy" and inspiration, and this book contains some fine poetry. His *De Monarchia* deals with politics, and the *De Vulgari Eloquentia* advocates giving up Latin in favour of the Italian in which he wrote both the *Vita Nuova* and the greatest of his works, *The Divine Comedy*. This is one of the fundamental books of European literature. Boccaccio and Petrarch were both contemporaries of Dante, but since they exemplify a new age they will be dealt with later.

Geoffrey Chaucer's *Canterbury Tales* is of almost equal importance, and its outline is well known, telling as it does stories recounted by a group of pilgrims travelling from the inn at Southwark (Chaucer was a Londoner) to Canterbury. It, too, gives a splendid pageant of mediaeval types in the 14th century but whereas Dante's vision was symbolical, Chaucer's was more earthy. On the other hand, Langland's *Piers Plowman*, like Dante's work, is visionary and has the intention of criticising social conditions in terms of a dream.

The End of the Middle Ages.

The Middle Ages did not end nor did the Renaissance begin at any special time. A dying class, without quite knowing why, loses confidence. Its breakdown leads to an art lacking in purpose and exhibiting insecurity about present and future. (This, rightly or wrongly, is the impression held by the Communist world of today about the art of the Western world with its lack of a single coherent idea, which we for our part may interpret as a sign of strength.) The decaying art of the Middle Ages shows these tendencies, being obsessed either with a longing regard for the dead past or a fearful concern for an uncertain future. On the one hand, increased interest in the feudal romance, on the other, death and doom.

Romances were popular with the nobility. *Amadis of Gaul*, a Portuguese tale, was widely read, as was the story of King Arthur as retold by Sir Thomas Malory (d. 1471). Froissart's *Chronicles* dating from the same period, although historical, were used with the romances to raise the flagging confidence of the old ruling classes. In the Church, John Wyclif (d. 1384) and others were beginning to affirm that if those in authority did not act in accordance with the laws of God they had no right to their position—a bad pope or king had no power to make demands on others. This was in opposition to the old belief that a pope is a pope and a king a king regardless of his character. The new attitude was expressed in such works as *On the Imitation of Christ*, by Thomas à Kempis of the Lowlands, which, in effect, emphasised the importance of good works and prayer before theology or right belief: "Profound words do not make a man holy, but a virtuous life makes him dear to God."

This concern with personal morality is seen in the popular drama of the time: the mystery plays and the morality plays. The mystery or miracle plays dealt with Biblical stories, and cycles of these running from the Creation to the Last Judgment were performed by simple workers or the guilds in the market-places of towns on special occasions. They were a form of popular art, sometimes tragic, sometimes vulgar, sometimes comical. The words of Isaac to his father made many weep:

> "Now I wold to God my moder were her on this hyll!
> She woold knele for me on both hyr kneyes."

The morality plays were more abstract. The most familiar in Britain, the 15th-century *Everyman*, tells how Everyman is called by Death and can persuade none of his friends, Worldly Goods, Good Fellowship, Kindred, Knowledge, Beauty, Strength, to go with him except Good Deeds (all represented by actors). Such plays had an influence on the later drama. They were sponsored by the Church, which in earlier days had tried to suppress acting.

There was a certain lugubrious sentimentality about the art of this time. Devils and dead bodies appeared everywhere, and the Last Judgment, but the main theme was the dance of death depicted vividly and frequently in woodcuts or on tombstones. Death was feared, jested about, but very present in the minds of the men of the late

Middle Ages, of whom the last example must be one of the greatest of French poets, François Villon (1431–85), associate of robbers, murderers, and prostitutes. Born poor, a dissolute cleric, sentenced to death for participation in a brawl, reprieved, and dying poor, he wrote great verse, notably in the two *Testaments*. Villon's question "Where are the snows of yesteryear?" was echoed by Dunbar, the great poet of Scotland, the poets of Spain, and by Skelton in England. It was the motto, says J. H. Cohen, of a dying world-order for which Villon could speak with authority, since the lessons of his age exactly matched his personal experience.

A New Sense of Individual Personality.

A new way of life and a new way of thinking had been developing in Italy from about 1300 and had spread to other parts of Europe by 1600. We have spoken of Dante already because he was essentially mediaeval in his way of thought, whereas Petrarch, his contemporary, we shall speak of later because he was a modern man of the Renaissance. What were these new beliefs?

Briefly, a new middle class of burghers or merchants was arising; the feudal system was breaking down so that kings turned to this class for help rather than to the nobles; the Church was losing its previous high position and its priests, instead of being the main patrons of art and the main source of learning, were often ignorant; the new intelligentsia were not priests but wealthy townsmen.

The discovery of individual man, brought about by the developing capitalist system, was the essence of the Renaissance. Previously, individuals, as contrasted with groups or categories, had not existed, now they did. The unity of Christendom gave way to groups of nations loudly acclaiming their independence of the Pope or any other external power—and this, of course, was behind the Reformation. As G. D. H. Cole has put it: "The trader became a Protestant not because he put it to himself that Protestantism squared better than Catholicism with his business interests, but because he was already thinking individualistically in connection with the everyday problems of life."

In art this meant that what had always been a social activity became a more individual one; music or painting or writing were no longer traditionally based on fixed standards, but became increasingly the expression of powerful single minds. In mediaeval times it would not have been possible for the artist to be "misunderstood" by his public, for he was using notions accepted by all, but after the Renaissance the artist in effect was increasingly asserting: "This is what *I* feel—take it or leave it!" Bach's music might have been thought poor by some of his contemporaries, but it could not have been rejected as music as that of many later composers has been. The early fuss made about Cézanne, van Gogh, or Epstein would have been incomprehensible to people who might have said of an artist that he was a bad craftsman (that is, that he was doing the right thing incompetently), but not that he was not an artist at all, that he was a person who was doing something quite meaningless.

THE RENAISSANCE.

Literature and the New Outlook: Petrarch.

We have seen some of the economic causes of the Renaissance and their effect upon culture. The movement began in northern Italy in such rising commercial centres as Venice, Florence, and Milan, but the countries of northern Europe and Spain lagged behind. In fact, it was not until the beginning of the 16th century that such events as the voyages of Vasco da Gama and the conquest of Mexico by Cortes shifted economic power to the western coasts of Europe, bringing about the changes in outlook which had earlier influenced Italy.

The two main psychological trends of the Renaissance were a belief in the importance of man, and an obsession with the works of the classical past. Both implied a denial of the standards of mediaeval times, and one of the earliest initiators of the revolt was Francesco Petrarca (1304–74), commonly known as Petrarch. A Florentine, who had spent much of his early life in France, he became a priest, and his love for Laura (whom he had once seen) became a ruling passion in his life. But his love, although unfulfilled, was more of this world and less otherworldly than Dante's had been; he was "half captivated by the world, half impelled to renounce it." He was not concerned with Heaven and Hell but essentially with his own reactions to life, and his grief at the death of Laura was a private purgatory, not a theological one. He was the first of modern poets, the perfector of the sonnet form, and had a far more immediate effect on European literature than Dante. Petrarch, living in the Middle Ages, was the first man to regard his own times as a period of barbarism from which he looked back longingly to Augustan perfection, and he travelled widely through Europe seeking classical manuscripts. He was the writer of the first of patriotic odes *All 'Italia* which identifies Italy with ancient Rome. Here personified is Renaissance Man: passionate, orientated towards this world rather than the next, admiring the culture of classical times, and fervently patriotic in a period when national states as we know them were being born. Petrarch wrote a great deal: an epic *Africa* imitating Virgil, biographical sketches, and poetry. But most of all he is famed for his sonnets. Giovanni Boccaccio was deeply influenced by Petrarch and died a year after him. He, too, wrote a good deal, but is best known for his *Decameron*, which tells how, during the Black Death in Florence, three young men and seven young women fled to a country villa and there amused themselves by telling ten tales each day for the ten days of their exile. This book is one of the masterpieces of Europe and is widely read today, both by those who admire the prose, which is one of the finest in Italian literature, and by those who enjoy the tales, which are for the most part highly spiced with sex and scandal. Boccaccio exemplifies another trait of Renaissance man—irreverence. In effect, he takes a number of stories collected from feudal romances and tears their ideals to shreds. Honour, chivalry, priestly continence, are all treated with biting sarcasm and humour.

The Classical Revival.

In mediaeval times libraries had been housed in monasteries, and what was read of classical works was limited by ecclesiastical instructions as to what was suitable; there was no widespread curiosity about them. Galen was studied for medicine, Aristotle for philosophy, and various works on Roman law or early Christian theology, but little else. Greek was little known, although it was still the tongue of Byzantium. The Renaissance changed this, and Europe was ransacked by scholars, such as Petrarch, seeking for manuscripts which had been overlooked or hidden away. Libraries were collected by members of the new bourgeoisie who were willing to pay high prices, and, above all, from 1393, Greek was taught in the university at Florence. Needless to say, this influx of classical literature and learning influenced European culture considerably, even if it sometimes degenerated into a kind of dilettantism which, as one might expect, was not so enthusiastically accepted in northern Europe.

Patrons.

Those who financed these new studies and the new art were patrons of great wealth, such as the Medici family, which ruled Florence, the heart of the Renaissance, from 1434 to 1494. Cosimo de Medici, financier and patron of artists and scholars, built the monastery of San Marco, and his grandson, Lorenzo the Magnificent, extended his patronage to many of the greatest figures of the Renaissance. Noting the example of such powerful families, kings, dukes, and popes were quick to follow their example.

Renaissance Thought: Machiavelli and Castiglione.

Two further writers of the Renaissance in Italy who demonstrated other traits of the period were Machiavelli (1469–1527) and Castiglione (1478–1529). The name of Niccolo Machiavelli is known to everyone, generally in an unpleasant connotation. His book *The Prince* asserts in effect that in war the end justifies the means, that moral considerations are irrelevant in attaining one's goal. This also was a break with former times, when rulers, no matter what they did, at least paid lip service to the moral code. Now expediency was all. Machiavelli was a fervent patriot who hated the disunity of Italy and closed *The Prince* with Petrarch's lines: "the ancient flame is not extinguished yet that raised the Italian name!" *The Art of War* and the *History of Florence* have little popular appeal today, but to us Machiavelli's greatest significance is in demonstrating a new attitude and in the fact that he is regarded, with Dante, Petrarch, and Boccaccio, as a master of the Italian language.

Baldassare Castiglione's book *The Courtier* defined the Renaissance gentleman. He was the courtier who behaved with charm, naturalness, and dignity, who was in varying degrees a philosopher, poet, or one accomplished in music. This is far from the ignorant fighting nobleman of mediaeval times, but it was to this ideal that Renaissance Man aspired. Sir Philip Sidney of England was respected in his life and almost worshipped after his death as the epitome of these virtues. He was the friend and supporter of Giordano Bruno whilst he was in England and before he was betrayed to be burned at the stake for his remorseless attacks on mediaeval philosophy.

Italian Drama.

The Italian drama of the late Renaissance was, on the whole, poor stuff based on such classical models as Plautus, Terence, and Seneca. The leading dramatist was Ludovico Ariosto (1474–1533), who wrote four of the best comedies. However, the importance of the drama at this time was that although itself of little significance, it had considerable repercussions in Spain, England, and France. Shakespeare's *Comedy of Errors*, *The Taming of the Shrew*, and *Much Ado about Nothing* are all based on Italian comedies, as *Titus Andronicus* with its gory details is based on Italian tragedy. Ben Jonson stole the plot of Ariosto's *Il Negromante* (The Necromancer) for his *Volpone*. These plays acted indoors before a small audience and essentially like our modern theatre had no connection with the religious dramas of the Middle Ages. They were purely secular and, in effect, a revival of the old classical drama which had been suppressed by the early church. The pastoral or lyrical plays are of interest in that, towards the end of the 16th century, with the appearance of the great musical genius Monteverdi, they developed into the beginnings of modern opera. The popular Commedia dell' Arte, which had no written script, developed, with its characters, into the Harlequinade and Pantomime.

Italian Painting and Sculpture: Masaccio, Ghiberti, Fra Angelico, and Donatello.

Italian art of the Renaissance from Masaccio (d. 1428) to Michelangelo (d. 1564) marks one of the highest levels of attainment in the history of Europe. Masaccio—the name means "clumsy Thomas"—was a great genius who died before he was twenty-eight, yet in the Florentine church of Sta. Maria Novella there is a wall-painting of the Holy Trinity with the Virgin and St. John beneath the cross, which is compelling in its new awareness of perspective. Masaccio was the first original artist since Giotto (we have seen how for a century after the master's death Florentine painters were largely imitators), but in part his success was due to the great architect Brunelleschi, who had for the first time worked out scientifically the principles of perspective. The Greeks knew about foreshortening, and the Hellenistic painters could create the illusion of depth, but nobody prior to Brunelleschi had known the mathematical secret of how to create the illusion of a row of trees (for example) leading backwards into the picture until it disappears on the horizon. Masaccio was also an expert in painting effects of light and shade (chiaroscuro), as his frescoes on the walls of the Carmine Church show. An awareness of perspective is shown too in the reliefs on the bronze doors of the baptistery in Florence by the sculptor Lorenzo Ghiberti (1378–1455). The scenes on the double east doors taken from the New Testament are so beautiful that Michelangelo said they were fit to adorn the entrance to Heaven. Ghiberti remained true to the principles of Gothic art, but he was prepared to make use of the new discoveries of his time. On the other hand, the painter Fra Angelico of Fiesole near Florence (d. 1455) knew about the new discoveries but made little use of them.

Angelico was a friar of the Dominican order, self-trained, who divided his time between tending the sick and painting. He is probably the only artist who has ever achieved the honour of beatification by the Church, and when in 1434 the Dominicans of Fiesole, a small town high above Florence, were given by Cosimo de' Medici the monastery of S. Marco in Florence itself, it was Angelico who was given the task of painting the walls. He painted a sacred scene in each monk's cell, and these show a sense of colour and a spirit of gentleness and simplicity which has appealed to observers through the centuries.

From 1450 onwards the influence of classical Greek and Roman art was becoming more pronounced in Italy. The essentially Gothic sculptor Niccola Pisano carved a figure of Hercules on the pulpit of the baptistery in Pisa as early as 1260, and Ghiberti's bronze doors in Florence show Isaac with a remarkably Apollo-like torso. Gradually, the simplicity of Giotto, the gothic artist, began to blend with the idealistic humanism of Roman art. Among the earliest results of this intermingling were the works of Donatello (d. 1466) the nickname (for Florentines delighted in giving their great artists nicknames) of Donato di Betto Bardi. Donatello or "little Donato" went to Rome with Ghiberti to study Roman antiquities and, returning to Florence, became the most significant sculptor of the 15th century. Among his masterpieces are the statue of *St. George* in the Church of San Michele in Florence; his *David* (Bargello, Florence), which breaks with the Gothic tradition of sculpture tied up with architecture (since it was designed to stand in the open to be viewed from all angles); and his noble bronze equestrian statue *Gatamelatta* in Padua, almost the first equestrian statue to be made since the days of ancient Rome.

Masaccio, Ghiberti, and Donatello were worthy members of the group surrounding Brunelleschi, men who were not copying Roman art but using it to their own ends in their desire to conquer reality. Donatello's fame in his lifetime is evidenced by the fact that, like Giotto, he was frequently invited to other Italian cities to create works of art such as the bronze relief on the font at Siena illustrating Herod's feast.

The Return of Terra-cotta.

One of the most remarkable developments of this time were the works in terra-cotta of the della Robbia family, and Donatello himself. Luca della Robbia (d. 1482), the founder, had carved decorations for the Cathedral of Florence, but the family also produced lovely works in clay to which they applied a beautiful glaze. At first these were white reliefs on a blue background, but later other colours were used. Predominantly the designs were of angels, cherubs, and babies, and outside the Foundling Hospital at Florence there can still be seen the work in this medium of Andrea della Robbia, nephew of the above. Objects in terra-cotta on a smaller scale, being cheap, became available to the less-wealthy classes.

The School of Padua: Mantegna. In Padua classicism was taken more literally and there was

an almost archaeological interest in the past. A number of rather inferior artists began to fill their pictures with allegedly "classical" objects such as broken arches and columns, but, at a higher level, there were those who wished to show the past as it was. Whereas a painter like Giotto had been basically concerned with the inner meaning of a scene and little, if at all, with its correctness in terms of historical accuracy, the great painter Mantegna (d. 1506), who had studied archaeology, tried to create real life scenes. His figures are correctly dressed, and the background of monuments and buildings is authentic. His series of wall-paintings in the Eremitani church in Padua, destroyed during the last war, illustrated scenes from the life of St. James and showed how Mantegna had really taken trouble to discover how Roman arches and Roman soldiers at the time of St. James appeared (he had made a special study of ancient monuments for the purpose). These lost paintings were amongst the greatest of all time; they made one feel the real spirit of Rome rather than the stock grandeurs of his colleagues, who had supposed that broken columns were enough. About this time, but in the region of Florence, another great painter Piero della Francesca, who died in 1492, was doing much the same thing. His wall-paintings in the Church of S. Francesco at Arezzo, notably *Constantine's Dream*, equal Mantegna's work in historical accuracy.

Botticelli and Uccello. A contemporary of Mantegna, who lived in Florence in the time of Lorenzo the Magnificent, was Botticelli (a nickname meaning the "little barrel") not recognisable under his true name of Alessandro di Mariano dei Filipepi (d. 1510). Botticelli had a great influence in his time and carried out many commissions for the Medici, his best-known works being *The Birth of Venus* and his *Spring* (Uffizi, Florence). Both these works deal with classical, not religious subjects Another Florentine, Paolo Uccello (1397–1475), whose paintings *The Rout of San Romano* and *Saint George and the Dragon* are in the National Gallery in London, was noted for his concern with perspective. It is recounted how, when his wife used to call him to come to bed, he would exclaim: "What a sweet thing perspective is!"

THE HIGH RENAISSANCE: (*c*. 1490–*c*. 1520).

This is the name usually given to the period when the previously developing tendencies culminated and came to flower. The main figures in the art of this time were Leonardo da Vinci, Raphael, and Michelangelo.

Leonardo (1452–1519), the illegitimate son of a Florentine notary, shows another of the characteristics of Renaissance man: universality. He was a painter, an architect, a philosopher, a poet and composer, a sculptor, an athlete, a mathematician and inventor, and an anatomist. These are the qualifications he gave when applying to Lodovico il Moro, Duke of Milan, who was seeking a city planner and civil engineer. Perhaps because he was so many-sided, his artistic output was small, and he is best known for his *Last Supper* painted on the wall of the refectory of the Monastery of Sta. Maria delle Grazie in Milan, his famous *Mona Lisa* in the Louvre, and his *Virgin of the Rocks*, also in Paris. These show two of Leonardo's particular abilities: the ability to express psychological nuances in the features of his subjects, and the ability to deal with the problems of light and shade.

The extraordinary thing is that, although Leonardo was much admired, few people in his time had any notion of his universal genius. The main reason for this was that much of his work was relegated to the Notebooks which he did not publish and which were written from right to left in what is known as "mirror writing" because it can only be read in a mirror. The anatomy of the body (he himself carried out dissections), the growth of the child in the womb, the laws of waves and currents, the laws of flight, all were studied by this astonishing man, who believed nothing but had to see for himself. In one of his Notebooks we find one of his observations which shows that he forestalled the theory of Copernicus. It reads: "The sun does not move."

Michelangelo (1475–1564) was the name given to Michelagniolo Buonarroti, the great painter and the last great Italian sculptor, who was also a poet. Born of a poor but genteel family in Tuscany, he was as an infant sent out to a wet-nurse, the wife of a stone-cutter, and this he was accustomed to say gave him his passion for sculpture. He was as restless as Leonardo and moved from Florence to Bologna, and from there to Rome and Siena, but his apprenticeship began in Florence in the workshop of one of the leading Quattrocento masters, Domenico Ghirlandjo. Like Leonardo, too, he studied anatomy, but instead of spreading his talents over a wide field as Leonardo had done, he became obsessed with the problem of how to represent the human body. In Michelangelo classical idealism, mediaeval religious belief, and renaissance energy met to produce some of the finest art ever known. At the beginning of the 16th century the architect Bramante, together with Raphael and Michelangelo, were all working in Rome at the same time on the new St. Peter's Cathedral and in the Vatican, whilst the only considerable activity elsewhere was in the Venetian School and the School of Parma, where Correggio was active. The paintings on the ceiling of the Sistine Chapel—a surface of about 6000 square feet—are perhaps the most impressive of Michelangelo's works, but the finest is certainly the painting of the *Last Judgement* behind the altar of the same building. Michelangelo always thought of himself primarily as a sculptor; his marble *Pieta* (St. Peter's) and the statue of *David* (Academy, Florence) are famous, as are the great figure of *Moses* in the church of St. Peter in Chains (originally intended for the tomb of Pope Julius II), and four figures, Day and Night, Dawn and Twilight (originally intended for the tombs of the Medici at San Lorenzo in Florence).

Raphael (1483–1520) of Urbino did not at first understand the new art which was arising in Florence, since he had been taught at Perugia by Perugino, who had not himself absorbed these ideas. It was only when he came to Florence that he came under the influence of Leonardo and Michelangelo. Raphael's Madonnas, which have gained him popularity with all ages for their simplicity and grace, include the *Madonna of the Grand Duke* (Palazzo Pitti, Florence), the *Sistine Madonna* (Dresden), the *Madonna with the Goldfinch* (Uffizi, Florence), and the *Ansidei Madonna* (National Gallery, London). He painted the frescoes on the walls of the *Stanza della Segnatura* in the Vatican, those in the adjoining rooms and elsewhere, and his finest portrait is that of Castiglione. But perhaps because of his more traditional training he never quite attained the stature or the passion of Michelangelo.

Venice: Giorgione, Titian, and Tintoretto. While this work was going on largely in Florence and Rome, the School of Venice, then a wealthy commercial city, was also producing great painters. Using a new oil colour, these artists were noted for their subtle chiaroscuro effects, and their gorgeous colours. Amongst them were Giorgione (*c*. 1478–1510), Titian (1477–1576), Tintoretto (1518–94), and Veronese (1528–88). Giorgione's *Tempest* is in the Venice Academy, Titian's celebrated altarpiece, the *Assumption of the Virgin* is in the Church of Sta. Maria dei Frari in Venice and his portrait the *Young Englishman* can be seen in the Pitti Palace in Florence. Tintoretto's *St. Mark Directing the Search for his Body* at Milan shows him to have learned from Titian, although his style is less vigorous; and Veronese, the grandiose and colourful, painted a group of these Venetian painters in his *Marriage at Cana*, now in the Louvre.

By the year 1517, Luther's attacks on Catholicism had taken effect and the Reformation in northern Europe was well under way. Ten years later Charles V sacked Rome and the High Renaissance was at an end. The Counter-

Reformation of the Jesuits re-introduced clerical control, and the Renaissance pendulum was swinging towards England.

Italian Architecture of the Renaissance.

As in painting and sculpture, the architecture of the Renaissance was based on classical notions, and since the Italians had never cared for Gothic, they were only too eager to return to old, if modified, forms. The first architect of this period was Filippo Brunelleschi (d. 1446) of Florence, where a number of his buildings may be seen. As a young man he had visited Rome with his friend Donatello with the idea of finding in classical buildings some method of raising a dome over the cathedral of his city, which had remained unroofed for nearly a century and was now open to competition for a design. From this visit Brunelleschi acquired an intense admiration for the works of ancient Rome, although he never followed their patterns slavishly, as can be seen in the ingenious double dome which was finally placed on the cathedral. This consists of an inner saucer-shaped dome of stone and an outer one in Gothic line on an octagonal drum. The Foundling Hospital already mentioned in connection with its decorations in della Robbia's terra-cotta had a porch supported by a long row of Corinthian columns, in the spandrels (*i.e.*, the spaces between arches) of which were the terra-cotta bambini. The Pazzi chapel in Florence is also by Brunelleschi, built in 1420. At about this time (1414) the manuscript of Vitruvius' *De Architectura* was discovered in the monastery of St. Gall in Switzerland and had an immediate effect This ancient Roman book ran through many editions and led to further books, such as the one by Palladio (1560) which had such a profound influence on English architecture. So important were the results of Vitruvius' works that Renaissance architecture has been described as "the architecture of a book."

Palaces. Most typical of Renaissance building in Italy is the domestic palace. These palaces mingled mediaeval concepts with classical ones, and one of the first was the Medici palace in Florence built in 1472 by Michelozzo de Bartolemmeo where the horizontal lines and the heavy cornice are obviously classical in inspiration. Drawn between a mediaeval concern for physical security and a more modern demand for the comfort of a settled existence, such buildings looked like fortresses with their thick stone walls and barred windows. There were three storeys, of which the upper two were for the living-rooms, and the whole was grouped round an open courtyard with a statue in the centre and a large gateway to the street.

The Rucellai Palace built later by Leone Alberti (d. 1472) has windows with rounded arches separated from each other by pilasters or built-in columns such as one sees in the Colosseum. Alberti was one of the great architects, a humanist and a strong supporter of classical design; he is associated with the Greek-cross plan in church-building, in which there are four arms of equal length in place of the Latin-cross form of Gothic and Romanesque, with its long nave and short transepts. Alberti also made popular the church façade in the form of a Roman triumphal arch, the main doorway being wide and high, those on each side smaller. Designs of this time were borrowed from classical sources, and such motifs as the egg and dart, leaf and dart, hawk's beak, and honeysuckle were widely used.

The basic principle of three storeys arranged round a central court continued during the High Renaissance, and the Farnese palace in Rome built by Antonio da Sangallo (d. 1546) is in this form, which, however, was elaborated by Donato Bramante (1444–1514), the great architect who worked in Rome at the time. Both Bramante and Raphael (who was also an architect) used double columns in the upper two storeys, with a plain ground storey in place of the rather monotonous single pilaster between two windows. The same design was used in the Grimani palace in Venice, but the Venetians, who delighted in ostentation and elaboration of ornament, took pleasure in the buildings of architects such as Sansovino, who overloaded his works in this way. Bramante's admiration of circular classical buildings like the Pantheon caused him to design the small round church known as the Tempietto near the Vatican. It has a dome resting on a tall circular drum.

St. Peter's Church, Rome. It was Bramante, together with Raphael and Michelangelo, who played the major part in the erection of the greatest church in Christendom, St. Peter's Church in Rome. This had a long history originating with the basilica erected by Constantine over the tomb of St. Peter, which lasted throughout the Middle Ages until its precarious condition made Pope Julius II decide to replace it with a new one. The great building took many years to erect, and the dome, planned by Bramante, was unfinished at his death. Its nave is 80 feet wide, and the central crossing is covered by one of the largest domes in the world, 138 feet in diameter, with its top 405 feet from the ground; the courtyard, with its circular colonnades, was added by Bernini in the next century (1629–67).

Other Representative Figures of the Age.

Typical of the late Renaissance were the buildings of Palladio (d. 1580), whose greatest work is the famous Villa Rotunda near Vincenza, which has a central hall based on that of the Pantheon and four identical sides, each with a porch in the form of a classical temple façade. It is a beautiful, but hardly a practical, building; for by this time the desire to impress and the fussiness which always seems to be associated with the art of a period which has over-reached itself interfered with the ordinary function of building as a practical art.

To the same period belongs a man who was a sculptor and goldsmith, not an architect—the quarrelsome and boastful Benvenuto Cellini (d. 1571), whose memoirs are readable if not always veracious. However, he is important as a representative figure of his age, and one of the few objects from his hand still known is the beautiful golden salt-cellar made for Francis I, king of France, and now in Vienna.

THE RENAISSANCE IN NORTHERN EUROPE.

Literature: Erasmus, Rabelais, and Sir Thomas More.

We began our account of the Italian Renaissance by discussing literature—not because this was the most important art form of the time but because it is the writer more than anyone else who gives an idea of the spirit of his age. In the north, three men who were representative in this way were Erasmus of Rotterdam (1466–1536), François Rabelais of France (1490–1553), and Sir Thomas More of England (1478–1535).

Erasmus was born out of wedlock, the son of a priest. This in itself was no great matter, since the condition of illegitimacy has been that of many great men from Boccaccio and Leonardo to the Emperor Constantine the Great, the "natural" son, to use the kinder mediaeval term, of a barmaid. But to Erasmus it did; for those who had good reason to be rid of him got him into a monastery where he was tied by vows before he knew where he was. All his life he remained a Roman Catholic, yet he was in a sense the founder of the Reformation, and above all a humanist. The thought of Erasmus has two main sources: a thorough grounding in the classics and a pietistic attitude towards religion given him by the brethren of the Common Life, to whose school he went at Deventer. The humanism of the classics, added to the new religious emphasis on good works before correct belief, caused him to castigate with his wit the corrupt practices in the Church of his day and many other aspects of social wrong-doing. *In Praise of Folly* is the most famous of his books

in its satirical account of human stupidity, but the *Handbook of a Christian Soldier*, a guide to practical piety, had much influence amongst the rising middle class, and its general tendency was towards a return to primitive Christianity and a study of the Bible. Erasmus' belief in the improvement of mankind through education led to his friendship with John Colet, Dean of St. Paul's and founder of St. Paul's School in London, where a humanist approach was inculcated.

These attitudes, the criticism of corruption in the Church, the emphasis on good works rather than ritual or belief, the return to simplicity in religion, the study of the Bible, and the importance of education, were the keynote of the Reformation. The leaders of the northern Renaissance advocated humanism but feared paganism, and the Renaissance here was more one of ideas than of art. Even in art a certain severity and abstract beauty of idea (as in the Virgins of van Eyck and Dürer) is more prominent than any sort of sensuous beauty. There were few patrons in the Italian sense save for a handful of potentates and burghers and the wealthy Fugger family, and little of note in architecture—which for the most part continued in a slightly modified Gothic—or in sculpture, which cannot compare with the Italian. Erasmus himself was lacking in aesthetic appreciation: he loathed church music and could not understand why money raised for organs would not be better spent on "poor starving creatures."

Sir Thomas More, Lord Chancellor under Henry VIII, was also a friend of Erasmus, like him was critical of Church abuses, and wrote his *Utopia*—a very important book in which he described an ideal state in order to criticise the society of his own day—to this end. But, refusing to take the oath of Supremacy recognising the Church of England, he was executed. Later he was beatified by the Roman Church and canonised in 1935 by Pope Pius XI.

Erasmus, Colet, More, and others were humanists intent on re-establishing a commonwealth of scholars whose common tongue would be Latin, but another group was, although influenced by Erasmus, essentially bound to its own national life. This latter includes Rabelais, Montaigne, Bacon, and the great writers of England and France. We will speak of Rabelais now, the others later.

Francois Rabelais (1490–1553) was the most significant French writer of the Renaissance and entered a monastic order at the age of seven. On reaching years of discretion, he found his situation displeasing and ran away to study medicine in Paris. He was a worldly monk, a physician, and a humanist who was also secretary to Cardinal du Bellay. Rabelais stood for learning and the right to criticise, and the only person he refers to with unfailing respect throughout his works is Erasmus. Although a Catholic to the day of his death, he mocked at monks and friars as drunkards, lechers, or frauds, and his two great works *Pantagruel* and *Gargantua* (usually read in this country in the translation of Sir Thomas Urquhart known as *The Heroic Deeds of Gargantua and Pantagruel*) are works of genius. Purporting to be the lives of two giants, father and son, they are really an excuse for discussing everything under the sun and mix parody with satire, and comic invention with a coarseness reflecting Rabelais' vast lusts which amuse rather than disgust him.

Artists of the Reformation: Dürer, Holbein, Brueghel.

In Germany, Philip Melancthon (d. 1560) was appointed to the chair of Greek at Wittenberg through the promptings of Erasmus. Turning increasingly towards the doctrines of the Reformation, Melancthon became a friend of Luther and of the greatest artist of the Reformation, Albrecht Dürer (1471–1528) of Nuremberg. Dürer travelled in Italy, but was always basically German, and his finest work is probably the panels of four apostles gifted to the town hall of Nuremberg. His *Self-Portrait* is a remarkable psychological study, and he produced many woodcuts and etchings of great delicacy and beauty. Dürer was admired even in Italy, where Raphael was effusive in his praise and Bellini became his intimate friend. Nature, he believed, was the only possible mistress for the artist, and when a true imitation of nature has been achieved "then it is no more his own, but has become art."

Dürer had been preceded by Martin Schongauer, the first artist to give up much of his time to engraving, now possible through the 15th-century invention of printing, and the period between *c.* 1450 and 1550 produced the greatest German engravers and painters: Dürer himself, Holbein, Altdorfer, Cranach, and others. Hans Holbein the Younger, whose father had also been an artist, belonged to Augsburg. Born in 1497, he too visited Italy, and his work is comparable with that of Dürer. Holbein finally settled in England as Court Painter to Henry VIII and produced many portraits of the great Englishmen of that time, including the monarch himself and the family of Thomas More. Since the Reformation had overtaken him by the time he arrived in England, he could no longer paint Madonnas like the one in his most famous work *The Virgin with the Family of Burgomaster Meyer*, now in Darmstadt.

German painting has peculiar characteristics. It is very emotional, it is obsessed with death, and it has an indefinable quality of fantasy seen, for example, in the magic forests, knights, and fauns of Altdorfer. Landscapes are given an impression of infinite space, and the most extraordinary colour effects are used to heighten emotion, as in Grunewald's *Crucifixion*, where the body is painted dark green. Attention to detail was a lesson probably learned from Flemish masters, of whom we have already mentioned Van Eyck, Van der Weyden, and Hans Memling at the close of mediaeval times. It remains to mention a Flemish artist, Pieter Brueghel the Elder (1525–69), about whose life little is known save that he had been to Italy and remained unimpressed by its influence. His main pictures are of peasant life (*e.g.*, *A Country Wedding*, now in Vienna), yet even his large *Massacre of the Innocents* remains purely northern in its inspiration. But, having reached the Reformation, we must turn now to post-Reformation art and the Baroque period of the 17th and 18th centuries.

THE BAROQUE AGE (*c.* 1600–1750).

The Art of the Counter-Reformation.

Styles in art obviously cannot be crushed into terms of time. The Renaissance, which began in Italy in the 14th century and was at its heyday in the 15th and 16th centuries (Italian *quattrocento* and *cinquecento*), was only just beginning in England when it was dying in Italy. Here maturity in design, so far as Renaissance style in architecture is concerned, began with Inigo Jones (*c.* 1620), developed under Wren, and only began to fade out in late Georgian times. In terms of history we shall take the Baroque Age to extend from about 1600 to 1750, roughly from the death of Michelangelo to the death of Bach, solely because the Baroque style in art was predominant during that era, although not necessarily in any given area. In terms of style, Baroque (the word means a huge pearl of irregular shape) is the art of the counter-Reformation, the movement initiated primarily by the Jesuits in order to reform the Church and bring the straying sheep back into the fold. It is an emotional and dramatic style essentially propagandist in intention; buildings are heavy and pompous in general form and are plentifully covered with voluptuous sculpture on which draperies float rather than hang and festoons of fruit and flowers are everywhere. Columns are no longer plain or fluted but twisted and spiral and are added, together with windows and recesses, not for any structural purposes but as ornament.

In painting, the genuine drama and emotion of the style of such artists as Michelangelo and Tintoretto was imitated until it degenerated into the insincere and theatrical art of Caravaggio,

Guido Reni, and Murillo. Another trait of Baroque art is the emphasis on the whole at the expense of the parts. In a Renaissance palace each storey is considered separately and, like the Roman Colosseum, has its own type of pillars or pilasters; a Baroque building would have immense pillars or pilasters passing from the bottom to the top. A Baroque painting is as closely knit as a jig-saw puzzle; the total effect may be magnificent, but, unlike a Renaissance picture in which each figure made sense, a figure isolated from a Baroque one would look odd.

Since Baroque is the art of the counter-Reformation, it is found only in those countries in which this movement was successful: Italy, Austria, Flanders, and Bavaria. There was no Baroque in England, although traces of its influence are seen, for example, in Blenheim Palace by Sir John Vanbrugh and in Birmingham Cathedral. So what we are really concerned with here is Baroque in most of western Europe and Renaissance in England; in fact, post-Reformation art.

In dealing with the arts of Egypt, Greece, or Rome the task was relatively easy, since we were taking single cultures and watching the slow development of their art. Even in mediaeval times, Europe was some kind of unity. But from the Renaissance when individual countries in the modern sense began to arise the problem becomes different; for what we see is great movements (Renaissance, Baroque, Enlightenment, the Romantic movement) sweeping over Europe and arriving in a number of countries at widely different times and becoming considerably modified by their new background. What are we going to do about the great, but little known, literature of Spain, the literature of Germany, the architecture of Russia? The only solution seems to be that when we come to a great figure such as Cervantes or Goethe, who were of world-wide importance, we must then turn back and give a rapid survey of their predecessors. From this point on, we must skip backwards and forwards over the centuries. We are forgetting strict chronology and are talking in terms of cultural movements.

Characteristics of Baroque Art. Baroque is grandiose, designed to impress, ornate, and the arts in a Baroque building are so interrelated and fused with each other that it is difficult to separate them. The building is conceived as a whole in which architecture merges into sculpture and sculpture into painting. It was designed to sweep the spectator off his feet by its grandeur. So with painting: "a good picture makes better religious propaganda than a sermon," said Frederigo Zuccaro of the Academy of St. Luke. But it was during this period that Italian art and influence began to decline partly due to the loss of trade with the Orient following the discovery of the way round the Cape by Vasco da Gama, and partly because Italy, unlike England, France, and Spain, remained un-united. The tradition of Italy's cultural greatness remained, the reality decayed.

Nevertheless, Rome at this time was becoming a city of magnificence. Streets, squares, fountains, palaces, churches, were being built, and the church of the Vatican was being given great colonnades and sculptured saints with flowing robes very different from the straight lines of Gothic. One of the creators of the new style was the sculptor and architect Lorenzo Bernini (1598–1680), of whom we spoke earlier, father of Baroque. The moving spirit behind it was Inigo Lopez de Recalde, better known as St. Ignatius of Loyola and founder of the Society of Jesus; for it was often the Jesuits who scrutinised plans and provided the money. (Hence in many parts of Europe the Baroque church in a town is still known as the "Jesuit church.") Bernini's canopy over the High Altar at St. Peter's (1630) is perhaps the first Baroque work of art, but the Barberini Palace in Rome, the colonnade in front of the Vatican, *The Fountain of the Four Rivers* in a Roman square, together with the statues of *Apollo and Daphne* and the *Ecstasy of St. Theresa* all attest to his skill. To heighten the effect of his work Bernini employed every artifice he knew, and stucco, variegated marbles, and gold-leaf were lavishly used.

If the earliest Baroque artists were Italian the motivation, through St. Ignatius, was Spanish. Spain had spent eight hundred years in fighting the Moors and doubtless for this reason the fierce and passionate feeling for the Catholic religion is still evident today. To the Spaniards, the Protestant was simply another type of infidel, and St. Ignatius Loyola was the spearhead of the attack against the new heresy. But by this time Spain was almost bankrupt through the mismanagement of her foreign possessions, and in addition had made the grave mistake of purging the non-Spanish Moors and Jews who had contributed so much to her civilisation. There was no money left to build, and so the main art of this time was painting but she could and did encourage the counter-Reformation and with it Baroque art throughout Europe. Spain had never been deeply influenced by the Renaissance, and architecture during the Renaissance period was characterised by the addition of a certain restlessness and ornate decoration imposed on the existing Gothic. This style, known as *Plateresque*, was exported to Latin America, where it can still be seen, but in Spain itself it was soon superseded by Baroque. The Escorial, the palace built in the early 16th century near Madrid by Philip II is, as one writer says, "a solitary example of a style which was eminently fit for the self-imposed prison of a religious maniac but not for human habitation." It is a dreadful bleak building which exemplifies the austere aspect of the Spanish character as the Carthusian monastery at Granada with its mixed Moorish and European elements exemplifies the flamboyant.

Spaniards like large buildings, and Seville has the world's largest Gothic cathedral, although those at Burgos and Toledo are not much smaller. In sculpture, the Portico de la Gloria, the carved door of the Cathedral of Compostello where St. James is believed to be buried, is one of the masterpieces of mediaeval sculpture. The influence here is French, and it was not until the 16th century that a distinctively Spanish style evolved with the work of Alonso Berruguete. This Spanish sculpture was entirely religious, usually in wood, and statues were coloured and often given real hair and clothing. Notable too are the altar-pieces, ceilings, pulpits, and stalls of carved wood with designs of great beauty and richness.

Baroque Painting: Calvaert, El Greco, Velasquez, Murillo.

The originator of Baroque painting was a Fleming, Denis Calvaert (1540–1619), who worked in Bologna and his work was carried on by the three Carraccis who were his pupils. The style of this school is dramatic, pompous, highly emotional, and shows the other traits of Baroque—balanced composition, ecstatic facial expressions, wild gestures, and remarkable effects of foreshortening. *The Madonna with Saints*, by Lodovico Carracci, is a typical example of their work which was carried on by Guido Reni (1575–1642), whose *Head of Christ* and *Aurora* are famous. Caravaggio's (1569–1609) *Entombment* is representative of the work of one of the best of these artists who influenced the art of other parts of Europe, notably the Netherlands. Rembrandt himself owed not a little to Caravaggio, as did Zurbaran in Spain.

The great Spanish painters of this time were the finest in Europe: El Greco (1548–1615), Velasquez (1599–1660), and Murillo (1618–1682). Dominicos Theotocopulos, known as El Greco (the Greek) because he was born in Crete, took up residence in Toledo, where he was in trouble with the authorities of the Church for certain "improprieties" discovered in his work. Fortunately Philip II asked him to paint an altar-piece for his private chapel and thus extended royal protection without which things might have gone hard for the painter (although the finished work was not, in fact, accepted). In a sense, El Greco is the first "problem" painter, the first artist whose works were judged not in terms of "good" or

"bad" but as "peculiar"; he was for a long time believed to be mad, and even now is somewhat of an acquired taste. The figures, elongated or triangular in form, are surrounded by a riot of contrasting colours and the total effect is highly dramatic. His style has been interpreted in terms of Byzantine, Venetian, and other influences, but since Byzantium had been dead for over a century, any influences from this source must have been by way of Venice, where they continued to linger. Important amongst his works are the large *Burial of the Count of Orgaz* and the smaller *Jesus Bearing the Cross*. Most of El Greco's work embellished the city of Toledo, where he was finally recognised as a genius and given a funeral "worthy of a nobleman rather than a painter" as his contemporaries observed.

Don Diego Rodriguez de Silva y Velasquez became a nobleman in his lifetime. He was a member of the Court, chief supervisor of the royal living-quarters, and as an intense realist little influenced by Italian ideas. He produced a whole gallery of Spanish social types (*e.g.*, his *Maids of Honour in the Spanish Court of Philip IV*). His *Rokeby Venus* is in the National Gallery of London and *The Water-seller of Seville* in Apsley House. The Baroque element in Velasquez' work is best seen in his painting *Las Meninas*, which shows the artist himself painting the Infanta Margarita, a reflection of the royal parents in a mirror in the background, two Maids of Honour trying to distract the attention of the little princess, two tutors, and, most fantastic of all, two dwarfs.

Whilst Velasquez was making impressive pictures of the Spanish Court, Murillo, the devout and sentimental, was with such works as his *Immaculate Conception* impressing the multitudes with the glory of the Church. These painters had a considerable effect on the art of the Netherlands then under Spanish domination. But whereas previously the art of this area had been Flemish (*i.e.*, from the area now known as Belgium), the fight for independence which gave freedom and Protestantism to the north (Holland) also brought about a great Dutch art. The 15th-century art of the Lowlands was Flemish, the 16th century showed equal ability of Flemish and Dutch, and in the 17th century the Dutch were supreme.

Spanish and Portuguese Literature.

To the average Englishman Spain is represented by one book—*Don Quixote*, by Miguel de Cervantes (1547–1616). Spain remains in some respect outside the literary tradition of Europe although few nations have produced greater poetry. The plays of Calderón (1600–81) (*Life is a Dream*, *The Prodigious Magician*) and of Lope de Vega, who, two years older than Shakespeare, wrote over 1,500 plays, are of main literary interest today. In devotional literature the *Life* of St. Theresa (1515–82) is one of the most readable of religious works, and the poems of St. John of the Cross (1542–91) together with his prose are great works of mysticism. The Portuguese writer Camões (d. 1580) wrote the *Lusiads*, one of the important epic poems of the Renaissance. In *Don Quixote*, Cervantes created one of the first figures in literature who can be regarded as a person, an individual character. The book recounting his adventures is one of the finest in European literature, a great comic epic which reduced the courtly traditions of the Middle Ages to dust but also showed the new Renaissance man to be equally unreal.

The Netherlands.

Italy, Spain, and Portugal were losing their former power, but Holland, having achieved independence from Spain, was prospering in her lucrative trade with the Dutch East Indies, which she had seized from Portugal. Protestant Holland was tolerant and members of many oppressed religious groups sought refuge there: Jews, Flemings, Anabaptist sects, and Catholics were permitted to live in peace to the great advantage of the Dutch. Printing flourished, since there was no censorship, and the great universities of Leyden, renowned for medical studies, and Utrecht, renowned for law, attracted students from all over Europe. Hugo Grotius (1583–1645) was the founder of international law and in his books asserted the principles of human rights in war and peace, the freedom of the seas, and the importance of morality in international affairs as contrasted with the Machiavellian thesis of expediency.

Dutch Painting: Jan Steen, van Ruysdael, Vermeer, Rembrandt.

As it was in painting that the Dutch excelled, it is worth while noting some of their characteristics in this art. First, its patrons were not noblemen but well-to-do merchants and manufacturers of the new middle class; secondly, and perhaps as a consequence of this, the subject-matter tended to be everyday scenes of ordinary life; thirdly, religious subjects, disapproved of by Calvinists, were much less common than in Flemish or Italian art. Hence we find still-lifes, portraits, city scenes, domestic interiors, tavern scenes, and landscapes. The Dutch, in fact, were almost the first Europeans to paint landscapes as such for their own sake and not merely as a backcloth in the main part of a picture. One aspect of this homely type of art is known as genre-painting—the realistic representation of common people and is best seen in the humorous pictures of Jan Steen (1626–79).

Some of the finest works in landscapes and portraiture were carried out by artists of the Haarlem school. After Rembrandt, the greatest landscapist was Jacob van Ruysdael (d. 1682), known for his *Mill near Duurstede* and the remarkable *View of Haarlem*, three-quarters of which is taken up with depicting cloud-effects. Frans Hals (d. 1666) is noted for his portraits, which give an insight into the characters of his time just as those of Velasquez do in very different circumstances. *The Laughing Cavalier*, *Pieter van der Broecke* (at Kenwood, London), and *Mad Babbe* all reveal a strikingly new technique in portraiture. The figures are natural and do not look (cf. Holbein and Velasquez) as if they had been posed. The last traces of the old tradition of painting an individual of a particular status as he *should* appear have gone and we see real people as in a snapshot taken in the fraction of a second. The manner is impressionistic and had a considerable influence on the later Impressionist school. Little is known of Hals save that he was frequently unable to pay his bills and in his old age was granted a pittance by the municipal almshouse whose governors he painted.

Jan Vermeer (1632–75) of the school of Delft was a painter of the first rank. He produced few pictures and none of any important scenes, but his work shows the triumph of technique over subject-matter: the simple subjects become of only secondary importance in relation to the sheer delight shown by the artist in the beauty of the visible world. Vermeer's paintings include *Head of a Young Girl*, *Young Woman with a Water-jug*, *Young Woman at a Casement*, *The Cook* and *View of Delft*.

There were schools of painting at both Leyden and Utrecht, the latter being noted for its still-lifes, but the most important was that of the wealthy city of Amsterdam to which belonged the greatest painter of Holland and one of the greatest who ever lived: Rembrandt van Rijn (1606–69). His paintings were portraits, landscapes, and large groups, and many were on religious themes. Although fond of scenes of everyday life, he had a distaste for the genre type of painting with its humorous and somewhat condescending representations of common people and its pleasure in rich colour for its own sake rather than as an effect to enhance the whole. Rembrandt was to begin with a fashionable painter, but his realism offended many of his sitters, and he left behind him on his death only some old clothes, his painting gear, and his immortal pictures. The path from relative wealth to lonely old age is depicted in his series of self-portraits, which with his other paintings and etchings (*Jan Six, an Amsterdam Patrician*, *St. Simeon in the Temple*, *Lesson in*

Anatomy, *The Night Watch*, *Christ Preaching*) reveal his immense genius. Rembrandt is always sincere and realistic, he cares little about formal beauty, and when compared with Italian painting many of his figures must shock; but then old age, poverty, weariness, hunger, and sorrow are not inherently lovely save with the beauty of the spirit with which Rembrandt so plentifully endowed them. He was masterly in his treatment of light and shade, and the deep shadows and high lights of his paintings are used to emphasise the impression he wished his subject to give. Rembrandt, even in his religious pictures, took his figures from life, and the Jews in the etching *Christ Preaching* are copied from real people in the Jewish quarter of Amsterdam where he lived for many years.

Flemish Painting: Rubens and Van Dyck.

The Belgians or Flemings, unlike the Dutch, remained Catholic, and the great Flemish artists of this time were Peter Paul Rubens (1577–1640), and the more aristocratic Anthony Van Dyck (1599–1641), both of Antwerp. Rubens was a prolific painter and his workshop had many assistants—virtually, it was a picture-factory. He was probably more strongly influenced by the Italians than by his Flemish predecessors, but he did have in the highest degree the Flemish skill in expressing the texture of cloth and living flesh. This is seen in his delightful *Head of a Child* (Valuz, Liechtenstein Gallery), probably his own daughter, which in its vitality far outsteps the formal portraiture of earlier times. The Italian love of the grandiose is evident in his *Crucifixion* and *Descent from the Cross* in the Cathedral of Antwerp. Van Dyck was a pupil of Rubens and became Court Painter to Charles I of England, where his name was anglicised into Sir Anthony Vandyke. His rather superficial delicacy and elegance was exactly suited to the paintings he made of the noblemen of this society. It was essentially an aristocratic art, and his *Charles I of England* in the Louvre is one of his best-known works. Rubens' figures are robust, full of life, and sturdy, Vandyke's express the ideals of noble blood and gentlemanly ease.

Architecture.

Baroque architecture and its final phase Rococo, which will be dealt with later, is admirably represented in the private houses and municipal buildings of Holland, such as the town hall of Bolsward and the Butcher's Hall in Haarlem. But some of the greatest glories of this style are to be found in Bavaria (the churches of Ottobeuren, Zwiefalten, Neresheim, Steinhausen); in the Austrian churches which, under Italian influence, were sumptuous and sombre; and in Switzerland (Ittingen, and the library of St. Gall). As has been mentioned, Baroque structures were built as single entities, and in many of these buildings the interior decoration is more remarkable than the architecture. Nevertheless, buildings such as the church at Einsiedeln in Switzerland together with the others named above are superior in that country to the mediaeval heritage.

The English Renaissance: Elizabethan Literature.

The glories of the Elizabethan age need not be emphasised here. By this time the Anglican Church had been established, Catholics and nonconformists were disapproved of, Drake and Raleigh were plundering the Spanish colonies, and the Armada was to be defeated. There was increasing prosperity, and the nation which, up to the time of Henry VIII had been noted for its gross table manners and lack of elegance, was becoming sophisticated, luxurious, and cultured. Music flourished as it has never done since, and the drama reached heights of excellence which make this not only one of the great periods of English history but of world history; it was the English Renaissance. Typical of the style of this time was an ornate and flamboyant quality copied from the Italian and known in England as "euphuism," in Italy as "Marinism" (after the name of a poet who affected it), and in France as "préciosité"; it was pure Baroque, but although used by William Shakespeare from time to time, most of his work rose high above contemporary mannerisms. We have already seen how many of the plots of the Elizabethan dramatists were of Italian origin. Here little will be said about Shakespeare (1564–1616), of whose life in any case so little is known that ingenious persons have sought to attribute his plays to others. Shakespeare is too great to need any commendation, and for the same reason we shall only mention the Authorised Version of the Bible made in the reign of James I (1611). Yet the works of Shakespeare and the Bible have been the most powerful force in English literature, and the Authorised Version is certainly the finest translation ever made if not the world's greatest literary work. Christopher Marlowe (1564–93), died before his thirtieth year, killed in a tavern brawl at Deptford; he is, after Shakespeare, the greatest Elizabethan dramatist and his *Dr. Faustus*, *Tamburlaine the Great*, and *Edward II* are still performed. Ben Jonson (1573–1637) was a friend of Shakespeare's, Poet Laureate from 1619, and achieved the distinction of being buried in Westminster Abbey. His comedies *Every Man in his Humour*, *The Alchemist*, and others were based, like those of Molière, on the Italian Commedia dell'Arte, but since tastes in comedy change more quickly than in tragedy (nothing could be more boring than Shakespeare's comic scenes today), Jonson, in spite of excellent adaptations, is of mainly historical interest.

Other important works of the early part of this period are the *Faerie Queen* of Edmund Spenser (1552–99), the *Essays* and *Novum Organum* of Francis Bacon (1561–1626), the *Voyages* of Richard Hakluyt (d. 1616), and *The Book of Martyrs* of John Foxe (1516–1587). Spenser is, of course, one of our greatest poets; Bacon in his philosophy suggested that the doctrines of religion could not be arrived at by logic, that theology and science are separate fields, and that induction (*i.e.*, the arrival at general conclusions from the collection of many facts) is the true method of science; Hakluyt was the first English naval historian; and Foxe, whose book was once thought "improving" amongst Protestants is one of those religious writers whose works in their descriptions of martyrdom leave one with a vague impression of indecency. The *Ecclesiastical Polity* of Richard Hooker (d. 1600) is famed for its prose but otherwise of little interest to the general reader.

Renaissance Music.

The two greatest names of this period when music as we understand it was being born were those of Orlando di Lasso of Flanders (d. 1594) and Giovanni Pierluigi da Palestrina (d. 1594). Lasso's *Seven Penitential Psalms* are his best-known composition, and with it we see the beginnings of harmony in which the composer thinks of music in terms of the sound at a given moment—vertically rather than horizontally, chords rather than polyphony. This new style was followed by Palestrina, the very non-celibate choir-master of the Pope's Capella Giulia, whose *Mass for Pope Marcellus* was accepted as a model. It was Palestrina, too, who perfected the madrigal, a composition for unaccompanied voices that made use of polyphony as well as simple chords. This new type of secular music was sung in Italy, Flanders, France, and, above all, England. In the 16th century, also, instrumental music independent of singing was first written, the instruments used being viols, virginals, recorders, and lutes. William Byrd (1543–1623) is one of the most important English composers of madrigals, although he was also an innovator in instrumental music who wrote compositions for strings, for the virginal, and for solo voice. The songs which he wrote to be sung in stage plays paved the way for Italian opera, initiated by Claudio Monteverdi (d. 1643) with his *Orfeo* and *Arianna*, the performances of which were attended by thousands and admired throughout Europe. Monteverdi was the first composer to use an orchestra with carefully specified music and to design recitatives which,

instead of merely imitating the rise and fall of the human voice, had a real emotional impact. The beginnings of opera and oratorio date from this time, as also does the no-longer existent masque for which in England music was written by Henry Purcell (d. 1695), organist of Westminster Abbey, composer, and greatest of our musicians.

Later Baroque: the Rise of France.

The age of Louis XIV marks the ascendancy of France over Italy, Spain, and the Netherlands. When Louis came to the throne in 1643, France had been involved in the disastrous civil wars which followed the Reformation and was no longer prosperous. Richelieu, however, solved the problem by granting the Huguenots (French Protestants) certain liberties and, above all, by increasing the power of the throne at the expense of the nobles. He was the founder of absolutism in France. The Court of Louis XIV revolved around the person of the monarch; it was highly formal and magnificent, and in its elegance and refinement put an end to the old court life of coarseness, drunkenness, and fighting. The *Essays* of Michel de Montaigne (1533–92) belong to an earlier period, and the essay form is of his own invention. Montaigne was a moderate Catholic who remained neutral during the religious wars, a lawyer and country gentleman, twice mayor of Bordeaux, and when towards the end of his life he was offered a court appointment it was refused in favour of a quiet life on his own estates. His position is that of a Stoic and rationalist accepting the facts that the earth is not the centre of the universe and that man is not very different from other animals. He was tolerant, believing that facts can only be interpreted in terms of their time and place, and above all he was interested in himself as a sample of the species man; for, as he said, " Every man bears within him the complete pattern of the human condition." Montaigne is a great master of style, and his essays are as readable now as when they were first written.

Painting: Poussin, Claude.

The great French painters of the age were Nicolas Poussin (1594–1665) and Claude Gelée (1600–82) better known as Claude. Poussin lived in Rome and was one of the neo-classical or academic school which attempted to improve on nature with an artificiality based on a study of classical statues. Such paintings as *Et in Arcadia Ego* in the Louvre depict quite unreal shepherds and beautiful young women in an Arcadia which belong only to the imagination. The skill with which the work has been carried out is remarkable, but its nostalgic concern with a totally unreal past invokes little response today. Claude, too, lived in Italy, but in spite of his studies from nature in the countryside around Rome, chose to depict dreamlike visions of the past. Yet his landscapes set a new standard by which real scenery was judged for a century after his death. Many wealthy Englishmen modelled their parks or gardens on those in Claude's works, and, as Gombrich says: " many a piece of the lovely English countryside should really bear the signature of the French painter who settled in Italy." His paintings are represented in the National Gallery.

Architecture: Versailles and the Louvre.

The palace of the Louvre had been started a century before (1546) by the French architect Lescot, but later Bernini (d. 1680) was brought from Italy to continue the work which he conceived in a grandiose style paying little attention to mere comfort or convenience. The more effective palace of Versailles designed by Jules Mansart, whilst characteristic of its age, is less flamboyant than the Baroque of Italy. Formal gardens were popular, and were laid out in geometrical patterns of flowers and shrubs with statues scattered throughout. Mansart also is responsible for the Church of the Invalides in Paris (1706).

French Drama and Literature: Molière, Corneille, Racine, Pascal and others.

To a considerable extent the centre of artistic life in the days of Louis XIV was the salon in which women played a leading part and drama, music, prose and verse were cultivated. It was a centre of polite conversation, elegant manners, fine clothes, and learning. The great dramatists of the age were Molière (the stage name of Jean-Baptiste Poquelin—1622–73), Pierre Corneille (1606–84), and Jean Racine (1639–99). Molière began as an actor and was influenced by the Italian Commedia dell'Arte, from which he derived his stock characters: boastful captains, pedantic doctors, retired tradesmen. Unsuccessful in their production of other plays, his company staged some of Molière's in which he took the chief comic parts, and these were so satisfying to the public that he was asked to appear before the king. Molière developed a style in comedy all his own, satirising people of many types: corrupt noblemen, religious hypocrites, doctors, lovers. Amongst his best-known plays are *Tartuffe*, *Le Médecin malgré lui*, *L'Avare*, *L'Ecole des Maris*, *Le Misanthrope*, *Le Malade imaginaire*. With *Tartuffe* he achieved complete maturity, giving real individuality to his characters, and annoying those against whom the play was directed. When Molière started to write, comedy had been regarded as a trivial aspect of the drama, when he died it had become an important part of theatrical art.

Corneille and Racine are very great playwrights whom it is nevertheless difficult for those who are not French to appreciate. Their themes are mostly taken from classical literature (although Corneille was through this medium preaching against the new totalitarianism of Richelieu), their style is rhetorical, and their characters are unnaturally noble—" Corneille painted men as they ought to be," said one critic. The intelligent Englishman finds these plays perfect—almost too perfect—in construction, perfect in economy of words, and much too perfect in their simplicity of plot, which tends to be centred round a simple moral problem rather than the behaviour of real people. No wonder the dramatists of France thought Shakespeare barbarous! Corneille wrote *Le Cid*, *Horace*, *Cinna*, and *Polyeucte*; Racine *Alexandre le Grand*, *Phèdre*, *Iphigénie*, *Andromaque*, *Britannicus*, *Athalie*. Whatever our imaginary Englishman may think, Racine is the greatest of French dramatists and one of the greatest of all time.

Nicolas Boileau (1636–1711), who wrote a number of foolish satires is important as the lawmaker of taste in this age when classical concepts were dominant. His *Art of Poetry* argued that good style is characterised by naturalness, truth, beauty, and reason and influenced both Dryden and Pope. In religious matters Jacques Bossuet (d. 1704) took a right-wing point of view, supporting the Church and Crown, Fénelon (d. 1715) was progressive in his views on education, war, and politics, and Jansen (d. 1638), a Netherlander, expressed his unpleasant views based on St. Augustine's doctrine that free-will does not exist. Jansenism is of importance mainly because it was accepted by Blaise Pascal (1623–62), whose *Provincial Letters* and *Pensées* are among the greatest glories of French literature.

The letters of Mme de Sévigné (d. 1696), the maxims of La Rochefoucauld (d. 1680), and the character sketches of Jean de La Bruyère (d. 1696) are all typical of the polished and cynical prose of the time, during which, however, Charles Perrault was also writing the fairy tales—or retelling them—of Bluebeard, Cinderella, and Little Red Riding-Hood. The tales and fables of Jean de La Fontaine (d. 1695) provide another example of the literature of the days of Louis XIV; his earlier efforts are mildly indelicate stories drawn from Rabelais and Boccaccio in verse couplets, but later, in his first book of fables dedicated to the seven-year-old Dauphin, he made use of the animal tales of Aesop and other Greek writers. La Fontaine is remarkable in that he is able to please everyone; his fables delight children, please students by their style, and older people find in them witty comments on human life.

English Literature of the Restoration Period: Bunyan, Milton, Dryden.

This period in England was a troubled one which saw the reign of James I, the execution of Charles I, the Commonwealth under Cromwell, the Restoration under Charles II, and the "Glorious Revolution" of 1688. Basically the issues were about the relationship between king and government and the nature of the church of England, and in an age of political experiment it was natural that political philosophers should arise. The most important of these were John Locke (1632–1704) and Thomas Hobbes (1588–1679). Hobbes' *Leviathan* supported the side of absolutism claiming that man's life is "nasty, brutish, and short," that men are instinctively aggressive, and that therefore a strong government is necessary to keep them under control. Locke, on the other hand, was a liberal who believed that sovereignty lies with the people, that their religious beliefs are their own affair, and that political decisions should rest with the majority. His *Essay on Civil Government* expresses these views.

We saw that a problem had been made over the authorship of Shakespeare's plays on the grounds that the real Shakespeare must have been too uneducated to write them. But such a view underestimates the extent to which the language and knowledge of a period can impregnate the common mind and deeply influence the mind of a genius however small his education. An example of this is John Bunyan, whose *Pilgrim's Progress* and *The Holy War* are two of the greatest allegories in European literature. (*See* **M12**.) John Bunyan (1628–1688) was a travelling tinker and preacher who was thrown into prison on the Restoration, but he had obviously studied his Bible to some effect, and *The Pilgrim's Progress* contains some of our finest prose. Nobody who has read this book will ever forget the death of Mr. Valiant-for-Truth for whom "all the trumpets sounded on the other side."

John Milton (1608–74), a very different man, since, although a Protestant, he had a deep knowledge of the classics, is one of our greatest poets. His long poems *Paradise Lost* and *Paradise Regained* are unlikely to be read in full by the general reader of today, but his sonnets, his *L'Allegro*, *Il Penseroso*, and *Lycidas*, will last as long as our language. Milton was probably influenced in his *Paradise Lost* by the great Dutch poet Joost van den Vondel (d. 1679), whose *Lucifer* is the peak of Dutch poetry. Samuel Butler (1612–80)—not to be confused with the Victorian one—wrote *Hudibras*, a long satirical poem directed against the Presbyterians, which, whatever its virtues, is little read now.

John Dryden (1631–1700) is another of our great poets whose important satires *The Hind and the Panther* (about the Church of Rome and the Church of England), and *Absalom and Achitophel* (about the Whigs) belong strictly to the category of "Eng. Lit."—like *Hudibras*, they are dealing with issues which are no longer important. Yet much of his verse and his translation of Virgil can still be appreciated. Dryden's life follows the changing ideas of his time: first a Puritan, then a Royalist, and, under James II, a Catholic, he got what he deserved—a tomb in Westminster Abbey. Another great poet of the time was Alexander Pope (1688–1744), whose *Rape of the Lock*, *Essay on Man*, and *Essay on Criticism* in their stylised elegance will continue to be read when his translations of Homer are not.

Architecture in England.

The situation in England was different from that in other European countries in that the Renaissance and the Reformation virtually arrived at the same time. Consequently, as Trevelyan says, "Shakespeare's England had a charm and lightness of heart, a free aspiring of mind and spirit not to be found in the harsh Jesuit–Calvinist Europe of that day." We have seen how the famous treatise of Vitruvius' *De Architectura* influenced the architecture of this time, and the earliest works of the Renaissance in England were carried out by Florentine craftsmen such as Pietro Torrigiano, who designed for Henry VIII the tombs of Lady Margaret Beaufort and of Henry VII, both in Westminster Abbey. This was at a time when Gothic churches were still being erected by English masons, but the terracotta medallions and busts of Roman emperors built into the walls of Hampton Court (a Gothic building) were nevertheless made by the Renaissance Italian, Giovanni da Majano, under commission from Cardinal Wolsey. Up to the date of Henry's death the building work done by Italians was confined to the relatively small ornamental details. A later, and on the whole unfortunate influence, came from Germany, France, and the Netherlands, when refugees from Catholic persecution came to this country to produce such perverted versions of classical art as Wollaton Hall near Nottingham or the "Tower of the Five Orders," applied to the Gothic front of the Bodleian Library at Oxford by English imitators. However, we owe to these refugees many charming carved Jacobean pulpits and the brick gables of East Anglia which resemble those of Bruges.

Tudor Domestic Architecture. In Elizabethan times the belief in "sweetness and light" began to spread to the country house, formerly a virtually fortified dwelling grouped around a courtyard with a drawbridge, moat, and battlements, and a single important room, the "great hall." The quadrangular plan remained but the rooms became spacious and beautiful and gardens were an integral feature of the design. The "long gallery" on the first floor which ran from end to end of the house overlooking the gardens was the great glory of Elizabethan and Jacobean architecture. In Aston Hall near Birmingham the gallery is 136 feet long, and the symmetrical lay-out of the building is in strong contrast to the irregularity of late Gothic houses. The horizontal lines of Italian are apparent, but the mullioned windows, gables, turrets, and pinnacles are pure English. These great houses scattered throughout the country vary according to the materials of the locality: brick in East Anglia, rough masonry in Yorkshire and Westmorland, more delicate masonry in the Cotswolds, timber or "half-timber" work in Kent and Cheshire. Amongst them are Haddon Hall, Bolsover Castle, and Hardwick Hall in Derbyshire; Hatfield House in Hertfordshire; Holland House in Kensington; Fountains Hall in Yorkshire; and Montacute, Longleat, and Barrington Court in Somerset.

Jacobean to Georgian: Inigo Jones and Christopher Wren. The Gothic tradition in architecture was long in dying and continued even after Inigo Jones (1573–1631) had introduced the doctrines of Palladio. In fact, in remote areas Gothic features persisted in buildings of up to 1700 or later. But Renaissance style can be seen at Caius College, Cambridge; Wadham College, Oxford; the halls of Gray's Inn and the Middle Temple, the Staple Inn, and the hall of the Charterhouse (all in London); and the Whitgift Hospital at Croydon, the Abbot's Hospital at Guildford. Of Inigo Jones little is known save that he was born in Smithfield and his father, a clothworker, was fined for using bad language. He was connected, too, with the theatre and was the inventor of movable scenery; amongst the few buildings which can be certainly ascribed to him are the Banqueting House in Whitehall, the Queen's House at Greenwich, and the original St. Paul's Church in Covent Garden. The style is always severely classical unlike that of Sir Christopher Wren (1632–1723), who treated architecture in a much more free and unacademic way. Wren built in a definitely Protestant fashion and would have no truck with Jesuitism or Baroque fashions; as an architect he was an amateur who did not receive his first commission until he was forty years old (although it is fair to say that by this time he was a founder-member of the Royal Society, a professor of astronomy at Oxford, a renowned mathematician, an inventor, and had shown great talent for drawing). He was that rare creature, a universal genius, and England's greatest architect. Amongst his works are the chapel of Pembroke College, Cambridge, the Sheldonian Theatre at Oxford, the cathedral of St. Paul's and the church

of St. Mary-le-Bow (built after the Great Fire of London) part of Hampton Court, the library of Trinity College, Cambridge, the "Tom Tower" of Christ Church, Oxford, Greenwich Hospital, Chelsea Hospital, and Kensington Palace with its famous Orangery.

THE AGE OF REASON, 18TH CENTURY.

Influence of Descartes and Voltaire.

We shall take the Age of Reason or the Enlightenment to extend from the end of the Baroque period to the beginning of the French Revolution in 1789. But the word "reason" should not be understood in terms of modern rationalism, for in the 18th century, under the influence of Descartes (d. 1650), the word meant not the discovery of general principles based on many facts but rather the deduction of many "facts" from first principles. Thus Descartes based his philosophy (in his *Discourse on Method*) on the thesis: "I think, therefore I exist." Christianity by this time had been somewhat discredited by the religious wars, its numerous sects, and by the new scientific discoveries. The works of Kepler, Galileo, and Newton had caused men to believe that, whatever the origins of the universe and whoever its Creator, it must be governed by fixed laws to which there can be no exception. The existence of God was not denied, but it was denied that He intervened in the running of a universe for which he had made adequate arrangements in the beginning. Miracles were out of fashion and religious rites were regarded as superstitions. This type of belief is known as "deism," but, however reasonable it may have appeared, it flourished in a society which was prepared to accept highly irrational beliefs in witchcraft, astrology, and alchemy.

Typical of the thought of this age are the works of Tom Paine (d. 1809), Pierre Bayle (d. 1706), and Voltaire (d. 1778). Paine was one of those Englishmen accepted on the other side of the Atlantic as an American because he chose latterly to live there; he is as "American" as the Scotsman John Paul Jones who founded the navy of that country. Paine's *The Age of Reason* is a well-known rationalist work which takes the view that Christ was a "virtuous and an amiable man" whose beliefs were not substantially different from those preached by other good men from the earliest times. Bayle's *Historical and Critical Dictionary*, which nobody is likely to read now, was of great importance in its day in asserting that religious beliefs were myths and that people should be allowed to think as they please.

Voltaire, the pen-name of François Marie Arouet, is the key-figure of his time and dominated the 18th century from the Regency to the Revolution. The pupil of a Jesuit school, he was twice in the Bastille, and then spent some time in exile in England, where he met such men as Pope, Swift, and Congreve, learned to speak English and admire Shakespeare, and developed an affection for English political institutions expressed in his "Letters on the English." Voltaire's works which earned him fame and disapproval were his *Life of Charles XII of Sweden* and his *Age of Louis XIV*; he also for his sins spent some time at the court of Frederick II of Prussia, who fancied himself as a writer and wished to profit from the Frenchman's tuition. But the only work by which Voltaire is remembered now is his *Candide*—a novel in which he struck back, following the disaster of the Lisbon earthquake, at the belief of the philosopher Leibnitz that "all things work for the best in the best of all possible worlds." Candide, brought up by his professor to accept this belief, goes through the most appalling series of tragedies before he realises its absurdity. *Candide* is one of the great European novels and its end, in which the hero decides to leave the idiocies of the world and cultivate his own garden, is well-known. But mostly Voltaire is known as the great opponent of sham and hypocrisy, the enemy of the royal courts of Louis XIV and Louis XV, and the originator of the phrase "Ecrasez l'infâme"—crush the infamous thing—with which he ended so many of his letters.

Historians: de Montesquieu, Vico, Gibbon.

Another sceptic, De Montesquieu (d. 1755) was also an admirer of the English, and his *Spirit of Laws* expresses this admiration. Together with the Italian Giambattista Vico of about the same period he was one of the first historians to seek for some logic in history; both were, in a sense, the predecessors of Karl Marx (a very great man whatever one may think of his theories). These men saw that history is more a matter of movements than famous people and that factors quite outside our control influence our behaviour. But one of the greatest historians and perhaps the greatest writer of this time was Edward Gibbon (1737–94), whose *Decline and Fall of the Roman Empire* is one of the most important historical works ever undertaken. It is a fine piece of English prose, based on his beliefs that Rome was a peak in civilisation, that it was destroyed by the Goths and Christianity, and that the Middle Ages and the Byzantine Empire were utterly barbaric. These ideas are typical of the period, although not on the whole acceptable now.

English Philosophers and French Encyclopédistes.

The conflicting philosophies of the 18th century, whatever their superficial differences, belong to their age. We have already mentioned Hobbes with his purely materialist approach and Locke's political philosophy. But Locke's other work *Essay Concerning Human Understanding* was important in that it took issue with the teaching of Descartes that there are innate ideas. The mind, according to this book, is initially a blank slate on which sensations are imprinted through experience. George Berkeley (d. 1753), in his *Principles of Human Knowledge*, asserted that the only things that exist are ideas (but then Berkeley was an Irishman); and David Hume (d. 1776) of Edinburgh, in his *Treatise of Human Nature*, founded modern philosophy. His completely sceptical and empirical approach is as typical of British philosophy as the wordy metaphysics of Kant and Schopenhauer are typical of German.

This was also the age of encyclopedias, the attempt to compress all knowledge into a few volumes. Diderot, de Condillac, and d'Alembert managed to do this in 17 volumes of text, 11 volumes of plates, 1751–72. Their work was based on that of Ephraim Chambers, whose *Cyclopaedia* was published in London in 1728. The French *Encyclopédie* was the most influential work of the Age of Reason setting out its ideals of deism, belief in progress, and distaste for absolutism and the Church.

Painting.

In spite of royal absolutism, this was increasingly a middle-class age, and the paintings of Jean Chardin (d. 1779) and Jean Baptiste Greuze (d. 1805), like those of the Netherlands at an earlier period, are essentially genre in style, depicting ordinary people and scenes. But the other side of the penny was the aristocratic art of Louis XV known as *Louis Quinze* or "Rococo". This style is late Baroque which has lost its solemnity and become subject to foreign influences—notably Chinese. Furniture, painting, architecture, become, as one might expect in the art of a decaying aristocracy, fantastic, restless, refined, and light. In architecture, Rococo is seen at its best in Vienna, Munich, Prague, and Dresden, but in Britain the style is represented by neo-classical Palladianism—only a near approach. In painting the best expression of Rococo is found in the works of the French painters Watteau, Boucher, and Fragonard.

Painting in France: Watteau, Fragonard. Jean Antoine Watteau (d. 1721) is the originator of the Rococo style in painting. His colours are delicate, his settings idyllic, royal, or connected with the theatre; they have no connection with reality and depict an imaginary life in which the sun always shines, men and women are always beautiful, and shepherdesses dance endless minuets. Neverthe-

less. Watteau was a great painter who has to be accepted in his context of grace and gallantry. François Boucher (d. 1770) was a favourite of Madame de Pompadour, produced many pictures in the "nymphs and shepherds" style characteristic of Watteau, and was famous as a decorator of boudoirs. His friend Jean Honoré Fragonard (d. 1806) had a taste for the picturesque in nature and devoted himself to painting pictures of contemporary life. Baroque was flamboyant but robust. Rococo frivolous.

Painting in England: Hogarth, Gainsborough, Reynolds. Previously there had been little tradition of painting in England, and the victory of Protestantism had made things even worse; for the Puritans could only understand the function of the artist as providing likenesses or improving the mind. Even portraiture had been mainly carried out by foreign artists such as Holbein and Vandyke. So when William Hogarth (1697–1764) came on the scene as an engraver who had to make his living by illustrating books it was necessary for him to create a type of art which would appeal to his countrymen, an art which would point a moral. His series of paintings *Rake's Progress* show the apparently inevitable development from laziness to crime and death (they may be seen in the Soane Museum in London) and his *Four Stages of Cruelty* illustrate the development from teasing a cat to brutal murder. However, Hogarth's fame during his life-time rested more on the engravings copied from his paintings than on his actual work, which was not taken seriously. Sir Joshua Reynolds (d. 1792) took the great masters of the Italian Renaissance as his models, he believed that there are certain rules of taste and that only the grand and impressive could be Great Art. But living at a time when portraiture was fashionable and other kinds of art were not, he, like his younger contemporary Thomas Gainsborough (d. 1788) painted elegant and graceful likenesses of the well-to-do though Gainsborough much preferred painting landscapes. Many of the paintings of Reynolds and Gainsborough can be seen in the National Gallery and the Wallace Collection in London. Gainsborough was the country-lover, Reynolds the man-about-town.

The End of Rococo.

The Rococo Age closes with the sculptor Jean Antoine Houdon (d. 1828), whose fine bust of Voltaire is in the Victoria and Albert Musuem, and the painter Jacques David (d. 1825), whose *Death of Socrates* shows the formal and classical approach typical of this dying period. But in England this was the time of the great Anglo-Irish writers, Swift, Sheridan, Goldsmith, and Congreve, and of the very English Samuel Johnson and his even greater biographer the Scotsman James Boswell. Jonathan Swift (d. 1745) was born in Dublin, educated at Trinity College, and became Dean of St. Patrick's in 1713. His *Gulliver's Travels*, *Tale of a Tub*, and *Journal to Stella* are representative of his skill in political satire and his extraordinarily tortuous mind, with its mixture of sentimentality, cruelty, and obscenity. Richard Brinsley Sheridan (d. 1816) is one of England's greatest playwrights, whose *School for Scandal* is still a favourite, although *The Rivals* brought about his ownership of Drury Lane, and Oliver Goldsmith (d. 1774) author of *The Vicar of Wakefield* and writer of the play *She Stoops to Conquer* is a close second. William Congreve (d. 1729) was famous in his time for his comedies, and like other people whose works we no longer read is buried in Westminster Abbey. (By and large it is true to say that very few people who matter at all today have had this honour.) This is true of Samuel Johnson (1709–1784), whose *Dictionary* was published in 1755, who was buried at Westminster, who wrote nothing which is readable nowadays—not even his novel *Rasselas*—and who is mainly of interest as the subject of James Boswell's *The Life of Dr. Johnson*. Boswell (d. 1795), the drunken, profligate Scot produced the finest biography in European literature, and his *Boswell Papers*, a collection of his journals and letters brought together at Yale University, are also well worth reading.

Music of the 18th Century.

The 18th-century orchestra was not the orchestra we know today. Its basis was the harpsichord; the violin was only beginning to displace the viol; and woodwind instruments, although they played an important part, were still crude. The piano, in which the strings are hammered instead of plucked, as in the harpsichord, had been developing since 1709 when the Italian Bartolomeo Cristofori produced an instrument which solved one of the fundamental problems of the piano—how to get the hammer to move back after the string has been struck. Later versions of the clavier and clavichord, as these early instruments were called, were almost all designed in Germany; the modern type of piano (or something like it) dates from the model designed by Silbermann of Bavaria about 1790. (By 1824 there were numerous manufacturers all over Europe supplying the needs of the ordinary citizen to whom the possession of a piano soon became a badge of prestige.)

The End of Baroque: Corelli, Scarlatti, Bach, and Handel. The works of the Englishman Henry Purcell (1658–95) brought about developments which led to the later achievements of J. S. Bach, whose death in 1750 is generally taken as the end of the Baroque period. Other important names of this phase are the Italian Corelli (1653–1713), the first great violinist and composer for the violin; Alessandro Scarlatti (1660–1725), another Italian, composer of operas, and his son Domenico (d. 1757), harpsichord player, important in the evolution of the sonata; the French harpsichord composer Couperin (1668–1733), contemporary of the Rococo painter Watteau, and Handel (1685–1759).

J. S. Bach was one of the greatest composers of all time and represents the consummation of the fugue form. Like Purcell, he was an organist and composed many pieces for this instrument. It was during his stay in Leipzig, where he was organist at the Thomaskirche, that he produced most of his finest works. He played an important part in improving the standards both of composition and playing for the organ, which he also used, together with strings and wind-instruments, as an accompaniment to solo and chorus voices in his cantatas. Among his many works are the Brandenburg concertos, the Mass in B minor the St. Matthew and St. John Passions, and the Italian Concerto. Bach had numerous children, several of whom had considerable musical talent if not their father's genius.

Handel spent most of his life in England. He was famed for his operas and oratorios, musical forms which date back to 16th-century Florence. Handel with his *Messiah*, *Saul*, *Samson*, *Judas Maccabaeus*, and many other compositions in this form, is undoubtedly the greatest composer of oratorios who ever lived. His operas are now seldom performed, although he composed over forty. The famous "Water Music" is alleged to have been composed to placate George I, who, as the former Elector of Hanover, was piqued because Handel had chosen to abandon Hanover for life in England. In old age Handel, like Bach, became blind; he is buried in Westminster Abbey.

The Classical Period: Haydn, Mozart, and Schubert. The period which opened with the passing of Bach and Handel was a classical period, one which saw the perfection of the sonata and the symphony, the creation of chamber music, and the clavichord and harpsichord superseded by the pianoforte. The composer's patrons were princes and noblemen at whose courts the new musical forms developed; even religious music was as often composed for performance in a princely court as for the use of churches. The important names of this period are C. P. E. Bach (d. 1788), son of the great Bach, who gave the sonata its first clear expression; Haydn (1732–1809), who founded symphonic orchestral music; Mozart (1756–91), whose instrumental writing for sheer beauty is unequalled; and towards the end of the period, Beethoven (1770–1827), who took classi-

cal forms and transfigured them into something quite new; and Schubert (1797–1828), creator of the German *Lied*, who represents the link between classicism and romanticism.

Haydn's birthplace was a small town on the Austro-Hungarian frontier where his father was a wheelwright. After leaving home he lived in poverty in Vienna, making small sums of money by teaching young ladies to play the clavier. His early compositions, like those of Mozart and Beethoven, were strongly influenced by the music of C. P. E. Bach, and at the age of 27 he became court composer to a Bohemian count. This position was followed by a more lucrative one at the court of Prince Esterhazy, a Hungarian whose patronage was to influence Haydn for many years. In middle age he became friendly with Mozart, who was only half his age and the two, although totally different in character, somehow supplemented each other and brought about considerable changes in music. Haydn is best known for his two great oratorios *The Creation* and *The Seasons* (written in his old age), his string quartets, and his symphonies, of which he composed 104. His visits to England proved of great importance; for it was there he first met Handel and was deeply impressed by a performance of the *Messiah* in Westminster Abbey. It was England, too, which first recognised him as a composer of the first rank and gave him the rare honour of a doctorate at Oxford University for which his "thesis" was the Symphony No. 92.

The life of Mozart was very different from that of his friend Haydn. Born in Salzburg, he was a musical prodigy, and from the age of four toured the courts of Europe. At the age of 26 he went to live in Vienna, where he died in poverty in his thirty-sixth year. His unpleasant money-grubbing father never ceased to advise him as to conduct in his many letters: Mozart was too easy-going and was told "you are too ready to answer jestingly on every occasion"; another letter reminds the composer "never lose sight of your main object which is to make money"; and yet another "do not neglect the popular style which tickles long ears."

A vist to Mannheim, the birthplace of German opera, had an important influence on Mozart, for it was there that he conceived the idea of producing German operas which would rival those of Italy and France. The result was three of the greatest of all operas: *The Marriage of Figaro*, *The Magic Flute*, and *Don Giovanni*. His finest symphonies—No. 39 in E flat, No. 40 in G minor, and No. 41 in C major (the Jupiter)—were composed in six weeks during the summer of 1788. Mozart also composed string quartets, piano concertos, and an immense number of dances, songs, and *divertimenti*. Towards the end of his life he engaged in another frenzy of composition to complete for the coronation of the king of Bohemia the opera *La clemenza di Tito* which he did in eighteen days whilst travelling from one town to another. Returning to Vienna in an exhausted state, he was approached by a mysterious stranger dressed in grey who commissioned him to write a Requiem Mass for an anonymous patron. Mozart became obsessed with the belief that this individual was God Himself and that the requiem was for his own funeral. Taking to bed he waited for the end, which came on December 5th, 1791, but not before he had composed the beautiful Requiem and almost completed it. He was buried in a pauper's grave, the location of which was immediately forgotten because the funeral party, discomfited by a shower of rain, left before the actual burial. With Beethoven we come to the end of the classical period; for, although his earlier works were composed in the classical style, he was basically a romantic. Accordingly, he, as well as Schubert, will be mentioned later in the section.

THE ROMANTIC AGE, 1750–1848.

Influence of Rousseau.

We shall quite arbitrarily take the Romantic Age as extending from the Age of Rococo to the revolutions of 1848. Equally arbitrarily we shall say that, just as Descartes was the herald of the Age of Reason, so Jean Jacques Rousseau (1712–78) was the herald of the Age of Romance. This period was a time of revolt against monarchical absolutism, against classical culture, and against the superficial rationalism which drew conclusions from so-called "first principles" instead of from facts. The statement "man is born free but everywhere he is in chains," often attributed to Marx, properly belongs to Rousseau. This was an outburst of emotion and a revolt against calm civility and the polite behaviour of an aristocratic order which no longer appealed to the common man. In religion "enthusiasm" had formerly been regarded with disapproval, but John Wesley (d. 1791) with his brother Charles proved that Methodism with its emotional approach brought instruction to the masses in a way they understood. Indeed, it might be said that Wesley, at this time when the English Industrial Revolution was beginning, caused the Revolution to be peaceable as in other countries it was not. Rousseau's *Confessions* for the first time in history depicted a complete man, his *Emile* is virtually a text-book of modern education, and his *La Nouvelle Héloïse* says, in effect, that if social conventions clash with love, it is the conventions which are wrong. Some may find Rousseau unpleasant, but he is one from whom we have much to learn. Previously, nature had been regarded with a certain distaste, now nature was fashionable. We have arrived at the period of the "natural man," of emotion, and of delight in landscapes which are not classical but rugged. When Dr. Johnson described a mountain as a "monstrous protuberance" he was talking in terms of the Age of Reason, when MacPherson wrote his forgeries of *Ossian* (a totally imaginary Gaelic poet), replete with mists, mountains, and heroes, we had already reached the Age of Romance.

Romanticism in English Literature: Byron, Keats, Wordsworth, Shelley, Blake.

This was a return to nature, and to the period belong some of our greatest poets: Thomson, Gray, Burns, Blake, Wordsworth, Keats, Shelley, and Byron. James Thomson (d. 1748) was a Scotsman whose *The Seasons* is perhaps little read now, but the poetry of his fellow-countryman Robert Burns (d. 1796) is on the whole under-estimated by the English—possibly because of the dialect—although honoured in Germany and the Soviet Union; for Burns was, with Heine, one of the greatest lyric poets of all time. *My Love is like a Red, Red Rose* is as lovely an account of young love as *John Anderson* is the tenderest picture of old. Thomas Gray's *Elegy Written in a Country Churchyard* is one of the best-known poems in our language, but his equally admirable *Ode on a Distant Prospect of Eton College* along with his other works is often neglected. Gray, born in London, died in 1771.

The poet most characteristic of the age was George Gordon, Lord Byron (1788–1824), who went through the whole rigmarole of romanticism —a cripple, a young man fascinated with evil, an unhappy marriage, leading up to his self-imposed exile abroad and his death at Missolonghi, where he was supporting the Greeks against the Turks. Byron's *Childe Harold* is a long epic poem unlikely to be read in full today, but his shorter poems *She Walks in Beauty Like the Night* and *So We'll Go No More a Roving* can never be forgotten. The same spirit of revolt is found in the works of Percy Bysshe Shelley (1792–1822) together with a love of nature found also in William Wordsworth (1770–1850), one of our greatest poets, whose *The Prelude* is the finest of autobiographical poems. Wordsworth welcomed the French Revolution only to be disillusioned later. John Keats (1795–1821), who died at the age of twenty-five from tuberculosis, took much of his inspiration from classical themes, and his melancholy quite unassociated with any political interests appealed to the school of Pre-Raphaelite painters whom he strongly influenced.

William Blake (1757–1827), poet, mystic, and artist, was a rebel in another way. A deeply religious man, he would have no truck with official art; his subjects, taken from theology,

were dreamlike and fantastic, as, for example, *The Ancient of Days*, a metal-cut with water-colour in the British Museum. His poems range from the mystical and almost incomprehensible (which caused his contemporaries to regard him as mad) to the delightfully simple *Songs of Innocence*. The art of Blake is in many ways reminiscent of that of another rebel of the same day, the great Spanish painter Francisco Goya, who is referred to elsewhere.

We have already mentioned the interest in the past excited by James MacPherson's Ossianic forgeries; but the past that appealed to the Romantic Age was a primitive past (as in *Ossian*) or a mediaeval past. The Waverley novels of Sir Walter Scott (d. 1832) and his long poems *Marmion* and *The Lady of the Lake* had an immense influence on the Romantic movement, particularly in Italy, where Manzoni's historical novel *I Promessi Sposi*, justly famous for its fine prose, was in its manner obviously based on Scott. Manzoni died in 1873, and his short-lived contemporary Leopardi (1798–1837), Italy's greatest romantic poet, was the other representative of a movement which, although popular for a time, did not take hold in a country which was still hankering after classicism. The verse of Carducci (1835–1907), a classicist, brought an end to the brief period of romance in Italy.

Romanticism in Germany.

Broadly speaking—and we are talking for the ordinary man not for the learned—Italian writing shows a great gap between Boccaccio (1313–75) and the writers mentioned above, and the same may be said of German literature. Between Walther von der Vogelweide (fl. 1190–1230) and 1750 there is nothing which need distract our attention. It was the Romantic movement which began to stir that something in the German mind which those who are not German find difficult to appreciate—the cloudy spaces, the nightmare visions, the sentimentality mingled with cruelty, which has already been noted in German painting. The herald of this movement in Germany was the critic and playwright Gotthold Lessing (1729–81), whose *Laokoon* destroyed the vogue for classical plays based on the works of the French dramatists, demanded a German theatre, and asserted that art must be true to nature. Lessing's *Minna von Barnhelm* and *Nathan the Wise* are the first German plays of a genuinely national character.

Lyric Poetry: Goethe, Schiller, and Heine.

But the greatest genius of this period known in Germany as the age of "Sturm und Drang" (storm and stress) was Johann Wolfgang von Goethe (1749–1832) of Frankfurt, who spent much of his later life in the Court of Weimar. Goethe was, like Leonardo, a universal man who studied botany, physics, optics, and mineralology in addition to writing his great lyric poems, and his most important work *Faust*. His play *Götz von Berlichingen* was a typical product of a time when all kings and priests were regarded as wicked and the hero was a friend of the oppressed, but his novel *The Sorrows of Werther* can only be regarded now as a period piece of sentimentality—although it caused an epidemic of suicides throughout Europe on the part of those who felt sympathy for the hero's self-inflicted death. However, later in life Goethe gave up his Romanticism and his play *Iphigenia in Tauris* is in pure classical form. It is extremely difficult to assess Goethe as a writer; his poems and his *Faust*, to those who can read German, are supreme works of genius—but, unfortunately, poetry is the least translatable of the arts and no good translations of *Faust* exist; his novels and plays are dated; yet possibly his greatest work was himself—the last man who was able to encompass the sum of human knowledge.

Johann Friedrich Schiller (d. 1805), the great German dramatist was an army surgeon whose first play *The Robbers* in the romantic style caused him to desert his regiment in order to view a performance. He was saved by Goethe, who obtained him the post of professor of history at the University of Weimar—a post for which he was entirely unfitted since he had little knowledge of the subject. But his later plays *Wallenstein*, *Don Carlos*, *Maria Stuart*, and *The Maid of Orleans*, all based on historical subjects, make up for the deficiency. In his *William Tell* Schiller makes an eloquent appeal for German nationalism in face of the armies of Napoleon then spreading over his country. So, too, did Johann von Herder (d. 1803), also of the Weimar school, whose works of criticism show the romantic obsession with the natural goodness of man, belief in progress, deism, and the study of early literatures such as the Norse sagas and early German poems. The works of Shakespeare, thought "barbaric" during the Age of Reason, were translated at this time by August von Schlegel (d. 1849), whose brother Friedrich wrote a work on Hindu philology which is one of the first studies in comparative languages.

The German literary skill is in lyric poetry. The plays of Schiller meet with little interest outside the land of their origin (although *Maria Stuart* has recently been produced in London and Edinburgh). There is no readable German novel until almost the 20th century, when it comes to maturity with Thomas Mann; for the typical form was the *Novelle* or short story as practised during the early 19th century by E. T. A. Hoffmann and Theodor Storm. But the lyric poets, from Klopstock, Goethe, and Hölderlin in the 18th century to Heine and Mörike in the 19th are supreme. Heinrich Heine (d. 1856), a Jew who spent much of his life in Paris, was one of the great lyric poets of the world and in his prose he graphically prophesied the future actions of Germany and Russia with an accuracy which has proved all too justified.

Philosophy: Fichte, Schopenhauer, and Hegel.

This was also the age of the great German philosophers: Immanuel Kant (d. 1804), Johann Fichte (d. 1814), Schopenhauer (d. 1860), and Georg Wilhelm Hegel (d. 1831). We need say little about these, for they are of little artistic interest and few would find, for example, Kant's *Critique of Pure Reason* either a model of style or even comprehensible. But they are typical of German thought, which, unlike the English empirical and the French rationalist approach that begins with facts, attempts to compress the whole universe into a single scheme. Universal egos, synthesis and antithesis, moral imperatives, and other terms which most people today would regard as almost meaningless, since metaphysics are not now in fashion, are the meat of German philosophy. But Kant is one of the world's great philosophers, and Hegel is important for his influence on Feuerback and Karl Marx, who promptly turned his idealistic philosophy upside-down and used it to defend historical materialism.

Painting: Turner, Goya, Delacroix, Constable, and the Barbizon School.

Romanticism was characterised by pleasure in nature, concern with the ordinary man, nationalism, and a revolt against formalism. The great painters of the time were English and French, and the artists to be described here represent these qualities. John Constable (1776–1837) together with Joseph Turner (1775–1851) are the important English landscapists; Eugène Delacroix (1798–1863), the romántic patriot; Jean Millet (1814–75), the portrayer of common men. In Spain, Francisco Goya (1746–1828) painted portraits of the great, such as that of King Ferdinand VII now at the Prado in Madrid, which can only be described as ruthless in their realism, and his prints in *The Horrors of War* tell of his hatred of the cruelty and reaction in his own country. Constable's landscapes—the famous *Haywain* at the National Gallery in London, his *Salisbury Cathedral from the Meadows*, and his *Study of Trees* at the Victoria and Albert Museum—fitted in with a time when people were reading Wordsworth and the other Lake Poets. But our greatest and most revolutionary painter was Turner, much of whose work was done in water-colour; Constable found his scenes within a few miles of his home, but Turner journeyed tirelessly over the continent from France to Rome with his sketchbook. This

eccentric genius, son of a London barber, and highly irregular in his way of life, was one of the greatest figures in the history of European art. In his old age his colours became stronger as if he were trying to paint light itself. The landscapes of this period (many of which he left to the National Gallery) seem, as Eric Newton says, to be melting away " by the radiance of light and the envelope of air." *The Founding of Carthage, The Fighting Temeraire, Steamer in Snowstorm, Calais Pier*, and *Crossing the Brook* are amongst the works which were championed by Ruskin in his *Modern Painters.*

Delacroix (whose best work is seen at the Louvre), also broke with classical traditions. Influenced by the paintings of Constable and the poems of Byron, he portrayed relatively contemporary scenes of revolution and action such as his *Wounded Cuirassier* and the *Arabic Fantasy* at Montpellier, which depicts a cavalry charge in a highly dramatic and exciting way. His large work *Massacre of Scio* was repainted after he had seen a landscape of Constable's in Paris. The so-called Barbizon school, very different in its inspiration from Delacroix, yet typical of its time, painted poor people, and is best represented by Millet, whose *Angelus, Man with the Hoe*, and *The Gleaners* (at the Louvre) are perhaps all too familiar, and Gustave Courbet, who gave the school its name from the little French village near Fontainebleau where these artists proposed a programme of realism. Other painters of the group are the landscape painters Jean Corot (d. 1875), Charles Daubigny (d. 1878), and that great master of landscape Theodore Rousseau (d. 1867).

English Architecture 1714–1820.

Baroque and Palladianism: Vanbrugh, Gibbs, Kent, Burlington. In this age we are still at the stage of late Renaissance in Britain. The country was prosperous and complacent; the church somnolent; and the universities of Oxford and Cambridge riddled with prejudice and obscurantism. Few churches were built during these years in spite of the good intentions of Queen Anne, the dreadful towns in the North and Midlands were arising towards the end of the 18th century to house factory workers, and fine architecture is mainly to be seen in the small Georgian houses of the middle class or the very large ones, such as Blenheim Palace, the large and ostentatious building presented by the nation to the Duke of Marlborough. Its astonishing architect, Sir John Vanbrugh (d. 1726), was an army officer, wrote a successful play, and so far as one knows learned most of what he knew of architecture from a French edition of Palladio at the age of thirty-five. Vanbrugh was the leading English Baroque architect and specialised in the grand and enormous. Blenheim and Castle Howard in Yorkshire are typical of his work. On the other hand, many of the small houses throughout England are in excellent taste, and, as befits an age of taste, their furnishings, china, wallpapers, and the rest fitted in with the whole design which might be Palladian, Baroque, Rococo, or Greek or Chinese in inspiration. Other great architects were James Gibbs (d. 1754), who built the Senate House in Cambridge and the Radcliffe Library of Oxford; Burlington and Kent, responsible for Chiswick House, the " Palladian Villa " based on Palladio's Villa Capra near Vincenza; " Carr of York " (d. 1807), painter and book-illustrator, architect of Harewood House and the Royal Crescent at Buxton; and the Scotsman Robert Adam (d. 1792), who designed Syon House at Isleworth and Kenwood House at Hampstead.

The Later Romantic Period: the Novel.

Tales have been told from time immemorial, but when the novel proper begins depends upon our definition of the word. The simplest definition is that a novel is (*a*) realistic and (*b*) deals with recognisable individuals often belonging to the period of the writer. Thus the work of Rabelais, Cervantes, and John Bunyan are not novels as understood by the 19th century. In terms of our definition the novel can be traced back to Portugal and Spain, for example, de Rojas' *Celestina* of the 16th century and numerous other works of the same period; to France, where it developed independently; and to Germany, where a century later (1669) von Grimmelhausen portrayed the mind of his age in his *Simplicissimus.* Daniel Defoe (d. 1731), author of *Robinson Crusoe*, Samuel Richardson (d. 1761), regarded as the founder of the modern novel, whose novels *Pamela* and *Clarissa Harlowe* had such wide influence, Henry Fielding (d. 1754), author of *Tom Jones*; Tobias Smollett (d. 1771); and Laurence Sterne (d. 1768), author of *Tristram Shandy*, are the very great 18th-century parents of the English novel. In France, Alain Le Sage (d. 1747) wrote *Gil Blas* and the Abbé Prévost wrote *Manon Lescaut* about the same time.

Most of these novels are " picaresque," a term meaning literally " concerned with rogues," but now used to refer to a type of book which recounts the history of an individual from birth to death, and places him in a large number of improbable situations, which amusing or interesting as they may be, really tell us little about the individual himself. The novelist is writing about his times rather than about a person. Smollet's *Roderick Random*, most of Defoe's novels, and even *Tom Jones* are of this character, although Richardson and Fielding are obviously struggling to break free. The real psychological novel which deals with a small group of ordinary people over a limited period of time and with their mental attitudes towards each other rather than their physical reactions towards environmental circumstances begins with that very great Englishwoman Jane Austen (1775–1817).

Jane Austen, the Brontës, and George Eliot. Jane Austen is one of the world's supreme novelists and it is a mistake to think of her works in such categories as " the novel of manners "—for small as her society may have been, she depicts within that compass how people really behave. The deceptive civility of her books covers an immense insight into human nature, which, as psychologists are discovering today, begins at home and in just such small circles. The Brontë sisters, Charlotte, Anne, and Emily are amongst our other great novelists; here we can only mention Charlotte's *Jane Eyre*, and Emily's *Wuthering Heights* and her poems, which, together with Jane Austen's *Pride and Prejudice* and *Northanger Abbey* belong to our literary heritage. George Eliot, the pen-name of Marian Evans (d. 1880) belongs to a slightly later period than the Brontës, who died about the middle of the century; her *Mill on the Floss, Middlemarch*, and *Silas Marner* are, whatever their merit, probably less read now than the works just mentioned. She is a great novelist whose novels are sometimes sentimental in a way that Jane Austen's are not; Emily's *Wuthering Heights* may be sentimental on analysis but is overwhelming in its impact. These are necessarily personal judgments, but few people would be prepared to deny that in the last fifty years more have read *Wuthering Heights* or *Pride and Prejudice* than have read *The Mill on the Floss.*

Dickens and Thackeray. By the middle of the 19th century the novel had become the most popular literary form in Britain, and its two greatest figures were Charles Dickens (1812–70) and William Makepeace Thackeray (1811–63). It is unnecessary to list the many works of Dickens, who has been taken to the English heart as has the light music of Gilbert and Sullivan; but those who are not English will wonder why those who seldom read at all and have never read Thackeray's *Vanity Fair* will take up *Pickwick Papers* with zest as if it were the latest thriller, and those who would never dream of going to a concert or an opera will know the music of *The Gondoliers* by heart. In spite of the great poets we have produced, the average Englishman tends to regard anyone who reads poetry as eccentric, yet he will solemnly study the somewhat tedious *Bab Ballads* of W. S. Gilbert. These are private secrets of the English—but then one may well wonder why, on the continent, the admired British works are those of Oscar Wilde, Byron, and the totally fictitious Ossian which few regard very highly

here. Dickens was a natural writer; his works are important for the light they throw on the social problems of his time; they are immensely readable; the comic figures are inimitable—but the critic is entitled to say that at his worst Dickens can be grossly sentimental (we know that he was often in tears at the readings he gave of his own works), and that his figures are exaggerated and unrealistic caricatures. There are people who have the traits of Mr. Pickwick, Mr. Micawber, or Scrooge, but, as depicted by Dickens, these characters are not "in the round"—they are almost like the figures in Bunyan or a mediaeval play each depicting a single virtue or vice. Jane Austen deals with real people; Dickens creates pawns for a particular purpose. Yet nobody will remove the affection of the English for Dickens.

Thackeray mostly wrote of the upper classes, and in the technical sense is a greater writer than Dickens. He is not melodramatic, his characters are of their type real, he does not descend to farce or caricature, but, perhaps for these reasons, his books are less read. *Vanity Fair*, *Pendennis*, and *The Newcomes* are amongst the best known. Literary taste is notoriously fickle, but the Barchester series of novels by the fine novelist Anthony Trollope (d. 1891) dealing with life in a small cathedral town clearly became popular during the last war precisely because, in a time of terror, people wanted to look back on the small things of life in a secure society. The Victorians, too, might be surprised to find that the highly estimated novels of Bulwer-Lytton (d. 1873), including *The Last Days of Pompeii* and Charles Reade's *The Cloister and the Hearth*, are little read now, whereas the Christian Socialist parson Charles Kingsley (d. 1875) is known to millions of children through his *Water Babies* and his *Westward Ho!*

The French Romantic Novelists: Hugo, Dumas, Balzac, George Sand. The novelists of France typical of the romantic period are Victor Hugo, Alexandre Dumas, Honoré de Balzac, and George Sand. Hugo (1802–85) was a very fine poet, and his novels—particularly *The Hunchback of Notre Dame*—show the tendency of the time towards historical subjects and concern with humble people. Dumas (1802–70) was the grandson of a negress from the West Indies and his dashing historical novels, such as *The Three Musketeers*, are widely known even to those who are aware of greater French writers only by name. There must be many more Englishmen who have revelled in the works of Dumas than have ever read Flaubert, who produced one of the greatest novels ever written. Balzac (1799–1850), another of France's and the world's finest writers, was a veritable book-factory—a trade carried out on a diet of black coffee with periodic outbursts of over-eating and drinking when he was paid. He wrote an enormous amount of trash anonymously but also more than eighty novels known collectively as *La Comédie Humaine*, which deal with middle-class life and for which he is justly famed. The novel as we have defined it belongs to France, England, and Russia; for few would deny that Flaubert, Balzac, Jane Austen (perhaps Dickens and Fielding), Tolstoy, and Dostoievsky are the supreme novelists. George Sand (d. 1876), the pen-name of Armandine, baronne Dudevant, wrote somewhat melodramatic works in the romantic style but is now best known as the mistress of Alfred de Musset and Chopin; Guy de Maupassant (d. 1893), famed in his lifetime for his short stories, although still regarded as a great writer, might today be criticised as more superficial than deep. There is something contrived about Maupassant's plots; he is witty but unfeeling.

With these writers we come to the period of realism with Flaubert and Zola, who will be discussed later.

Russia: Awakening under Peter the Great.

It was Peter the Great (1689–1725) who brought Russia into the orbit of Western civilisation. In the 10th century Russia had been a small country centred about the city of Kiev, to which Christianity of the Orthodox Church was brought from Constantinople and with it Byzantine forms of art. This art was, as we have seen, almost entirely religious in the form of icons and wall-paintings for churches. Indeed, icon painting dominated the art of Russia for many centuries, but reached its zenith at Novgorod in the 14th and 15th centuries. Architecture, too, was based on Byzantine patterns, though the forms were modified in characteristically Russian ways, such as the familiar onion-shaped dome, designed to throw off the snow. The church of Sta Sophia at Novgorod, belonging to the 11th century, has five such domes. In the 16th century Moscow became the artistic centre of Russia. Peter's reforms, however, brought a break with Byzantine tradition. Foreign painters and architects were imported, and the 17th century produced a style known as "Moscow baroque." St. Petersburg (Leningrad) was planned by Italian and French architects and became the centre of cultural activity under Catherine the Great. Baroque gave way to a severe and simple classical style, and the 19th century saw the beginnings of the romantic movement.

Russian musical tradition had been confined mainly to the church, although no country is richer in folk-music than Russia. Peter I introduced Italian opera, but a reaction came with the Napoleonic wars and the literary revival initiated by Pushkin, the great poet of Russian romanticism. The movement began with Glinka (1804–57), who after studying in Italy for three years decided to come home and write Russian music. Unlike the composers of Germany, France, and Italy, the great Russian composers of this age were amateurs. Alexander Borodin (d. 1887), the composer of the unfinished opera *Prince Igor*, symphonies, string quartets, and songs, was a professor of chemistry and the founder of a school of medicine for women. Rimsky-Korsakov (d. 1908) is known for his *Scheherazade*, and Moussorgsky (d. 1881) for his opera *Boris Godounov*. Perhaps the greatest Russian composer was Peter Tchaikovsky (1840–93), who wrote ballets and symphonies too well known in this country to require mention here.

Curiously enough, some of the greatest Russian literary figures are relatively unknown outside the country except by name. We know of Ivan Turgenev, Tolstoy, and Dostoievsky, of the short stories and plays of Anton Chekhov because we have read their works or seen them in the theatre. But few know of the poet Pushkin (1799–1837), who is regarded by Russians as the greatest figure in their literature; of Mikhail Lermontov, lyric poet and novelist; of Ivan Krylov, teller of fables or even Nikolai Gogol, whose *Dead Souls* is a masterpiece of humour. The reasons are perhaps that Pushkin wrote verse which is, on the whole, untranslatable (*Eugene Onegin*, like Goethe's *Faust*, is only fully appreciated in the original) and that in Western Europe Russian literature really begins with Turgenev (1818–83), who was the first of her great novelists to win recognition there. In his novels—for example *Fathers and Sons*—Turgenev shows how western revolutionary ideas were beginning to influence Russian thought. He was the most western-minded of Russian writers. But the greatest of all Russia's novelists were Dostoievsky (1821–81), author of *Crime and Punishment*, *Brothers Karamazov*, *The Idiot*, and *The Possessed*, and Tolstoy (1828–1910), whose *War and Peace*, *Anna Karenina*, and *Resurrection* are amongst the most important European novels.

Most of the writers we have described were revolutionary in the sense of being against the existing government. Their views ranged from liberalism to anarchism, and, like most revolutionaries, they belonged to the middle or upper classes. Maxim Gorky (pen-name of Alexei Pieshkov, d. 1936) is one of the few Russian writers who could be described as of working-class origin.

Early American Art and Literature.

By "early American" we mean the European art which developed from 1781 when America became a nation. That this art was primarily

European was inevitable, and a glance at any book of "American" folk-songs will show that the majority are English, some of the later ones German, and a smaller number indigenous—these are the songs of the colonisation of the West, the work-songs, and the songs of the negro. They form a picture of the history of this great country, which, curiously enough, the Americans in their dislike of "colonialism" do not consider to have been colonised by themselves.

In Europe William Cullen Bryant (d. 1878) is little known; he was a poet who, like most of the literary men of this period, lived in Massachusetts (the others were centred around New York), but we do know Washington Irving's (d. 1859) *Rip Van Winkle* and the adventure novels of James Fenimore Cooper (d. 1851), whose books were asked for by Franz Schubert on his death-bed. But even if Van Winkle is a widely known legend and Cooper's *Last of the Mohicans* appears on television, nobody could suppose that these were great writers. Harriet Beecher Stowe (d. 1896) produced a tremendous effect with her novel *Uncle Tom's Cabin*, which preached against slavery, but again nobody would today regard it as literature—it is simply excellent journalism. Nathaniel Hawthorne (d. 1864) is of more considerable stature; his *Scarlet Letter*, with a characteristically puritan flavour, is a fine novel, and many of us must have got our first taste of Greek mythology from *Tanglewood Tales*. Henry David Thoreau (d. 1862) was not a novelist but a philosopher, whose *Walden* describes his life and thoughts in the woods where he had retreated as a protest against a society which, he felt, interfered too much in the individual's affairs. He was not, of course, a philosopher in the formal sense; basically he was a pacifist, an anarchist in his disapproval of authority, and an advocate of a return to nature. He, like Tolstoy, strongly influenced Ghandi. But the greatest American writers in terms of world influence were undoubtedly Herman Melville, whose *Moby Dick* (1851) is one of the very great novels; Mark Twain (pen-name of Samuel Clemens, d. 1910) and author of the beloved *Huckleberry Finn* and *Tom Sawyer*; Henry James (d. 1916), who spent most of his life in Britain, where he received the Order of Merit; and Edgar Allan Poe, whose short life (he died at the age of 40 in 1849) nevertheless encompassed the writing of some excellent poems, the invention of the detective-story form—although, of course, the very wise will find earlier origins—and the influence upon French writers and poets which was specially important to Baudelaire and Mallarmé. Henry James wrote novels mostly with a European setting (*The American*, *Portrait of a Lady*, *Daisy Miller*); he is regarded as a great novelist—and certainly his works have lasted better than those of most others in this century—but non-addicts will find his tortuous style irritating and prefer his two long short-stories *The Turn of the Screw* and *The Aspern Papers*. Ralph Waldo Emerson (d. 1882) wrote essays which, with the works of Marcus Aurelius, were amongst the "improving" books to be found on most Edwardian or late Victorian bookshelves, but today they appear somewhat platitudinous. His views were associated with those of Thomas Carlyle.

American Poetry. The New England group of poets produced such men as Bryant, already mentioned, James Russell Lowell, and Longfellow. Apart from Henry Wadsworth Longfellow (d. 1882), who was a darling of the Victorians but is probably less highly thought of now (for who today reads *Hiawatha*), we can ignore the others, who excite little interest here.

Undoubtedly America's most important poet is Walt Whitman (1819–1892), who was born in New York. His verse, in a sense, heralds the beginning of modern poetry with its free style based on none of the rules which had been used before. Whitman in his emphasis on democracy and his new manner of writing verse is the first truly American poet; he is as typical of the America of his time as the Statue of Liberty and the rebellious Huck Finn, who avoided his Aunt Sally because she was going to "adopt me an' sivilise me." *Leaves of Grass* is his best-known collection.

THE LATE 19th CENTURY IN EUROPE.

Great Figures of the Age.

The crowded events and the great men of these years cannot possibly be described in any detail here. It was the age of great political thinkers, of the rise of the working class, the age of Karl Marx and Engels, of Saint-Simon, Fourier, and (earlier) Robert Owen. In science it was the age of Darwin, Pasteur, and Mendel; in poetry of Tennyson and Browning; in music of Wagner and Verdi. The political views and writings of Thomas Carlyle (d. 1881) are difficult to assess. Fifty years ago they were required reading, but now one wonders whether Carlyle's allegedly democratic beliefs were not tinged with a strong element of authoritarianism obtained from the German philosophers of whom he was so fond. In his *Heroes and Hero-worship* he makes it quite clear that the common man cannot free himself but needs a "hero" to lead him. His *French Revolution* makes the same point: that the working classes are dangerous. Thomas Babington Macaulay (d. 1859) is a great stylist and perhaps our best-known historian, although his *History of England* written from a Whig point of view begins with the year 1685 and ends, unfinished, at 1702. His *Essays* are important, but his poems are now of little significance. Other famous historians of the time are George Grote, with his *History of Greece*; Henry Buckle, who tried in his *History of Civilisation in England* to show that the main motive factor in history is economic; John Motley, who wrote *The Rise of the Dutch Republic*; the American William Prescott, who wrote of the Spanish conquest of the Incas and Aztecs; and one of the greatest historians who ever lived, Jakob Burckhardt, the Swiss author of *The Civilisation of the Renaissance in Italy*.

Of Victorian poets we can only refer to Alfred Tennyson (d. 1892), who composed such poems as 'Sweet and Low,' 'Tears, Idle Tears,' and 'The Splendour Falls on Castle Walls'; his *Idylls of the King* and *In Memoriam* are amongst his finest works. Robert Browning (d. 1889), who is possibly a greater poet although certainly less popular. Browning's wife Elizabeth Barrett Browning—and here again we see the fickleness of public taste—although a comparatively minor poet was more read than her husband in their lifetime. And Matthew Arnold (d. 1888) critic and poet, whose *Culture and Anarchy* expresses the view that culture can regenerate the world; we must "know the best which has been thought and said in the world." As a poet Arnold is probably more highly esteemed today than ever, and his 'Dover Beach' is one of the great English poems.

Movements in art are often initiated by relatively unimportant men—for example, Byron, who is by no means our best poet, was the inspirer of Pushkin in Russian and other continental writers too numerous to mention, and Walter Scott, not one of our best novelists, had an equally strong impact in Western Europe. Similarly John Ruskin (d. 1900) played no small part in the Gothic revival which influenced building in Britain, France, and other countries including America. In Britain Augustus Pugin (d. 1852) and in France Viollet-le-Duc (d. 1879) were the architects who enthusiastically rediscovered mediaevalism. The days of the earlier styles already described ended with John Nash, architect to George IV and designer of the "Royal Pavilion" at Brighton (in exotic Oriental style), as well as the great town-planning scheme which lies between St. James's Park and St. John's Wood in London; Regent Street, Waterloo Place, the whole of Regent's Park, Carlton House Terrace, Trafalgar Square, Buckingham Palace, and the Marble Arch (originally designed as an entrance gateway to the palace) are all among the works of the architect who considered himself a "Greek Revivalist." There were other buildings in the classical style of a later period; St. Pancras Church, the National Gallery, University College, by various architects, but the style petered out with Smirke's British Museum. Sir George Gilbert Scott (d. 1878) was a leading protagonist of the Gothic revival, very famous in his time, and guilty of the Albert Memorial in Kensington

Gardens. Ruskin disliked the age in which he lived. Yet in his mediaevalism, his moralising, his concern to educate the poorer classes, he is wholly of his age, as is William Morris (d. 1896), who also hated the products of industrialism and, like Tennyson, wrote imitation mediaeval verse. He was, with Dante Gabriel Rossetti, Holman Hunt, John Millais, and Ford Madox Brown a leader of the Pre-Raphaelite school of painting which believed that sincerity in art had ended before Raphael. Morris, a socialist, is unlikely now to be considered as a poet, he produced no important paintings, but he did a great deal to influence and improve interior decoration. The sentimental mediaevalism of the Pre-Raphaelites is, whatever its merits, not on the whole acceptable to modern taste.

THE ROMANTIC AGE IN MUSIC.

The 19th century was the period of the romantic composers whose music expressed emotion in a direct and powerful manner. Previously the emotion aroused by a musical composition had been delight in the formal perfection of the work itself—that is, in the music for its own sake. Now specific emotions were expressed—emotions of joy, sorrow, anger, or love. Sometimes in so-called "programme music" the composer tried to tell a story or produce sound effects imitating events. Tchaikovsky's "1812" overture has the roar of cannon; Schubert's song *The Erl King* has a piano accompaniment which imitates the beat of horses' hooves; and Beethoven's Pastoral symphony has headings for various movements, such as "by the brook," "nightingale," "cuckoo," "peasants merrymaking," "tempest and storm." This would have seemed very strange to composers of the earlier classical school. Beethoven and Schubert were the last of the great classical composers and the first of the romantic composers.

Beethoven, Weber, and Schubert.

Ludwig van Beethoven (1770–1826) was born at Bonn. The "van" was an indication of his Flemish ancestry, not a sign of aristocratic origin as is the "von" of Weber. We have seen how in the other arts it was a long time before the artist came to be recognised as a special kind of person rather than a mere craftsman, and in music the delay was even more prolonged. Mozart, Haydn, and their predecessors had been told by their patrons what to compose, and when visiting a great house to give a recital they had to eat with the servants. Beethoven put an end to this. He composed what he pleased and insisted on dining with his hosts. He refused to accept the belief that music was a social grace; it must, he said, "strike fire from a man's heart." In a sense Beethoven was the first composer to be accepted, not as beneath or even equal to his listeners or patrons, but as a supreme genius towering above them. When he died 20,000 people attended the funeral and all the schools were closed. Beethoven's many works include nine symphonies, of which the more familiar are the Third or Eroica, the Fifth with its "V sign" opening bars, the Sixth or Pastoral, the Seventh, and the Ninth or Choral symphony in which the last movement is sung by a choir. The piano sonatas, piano concertos, and quartets are among his finest compositions. His one opera *Fidelio* was not popular in his lifetime and is seldom performed even today, but the two overtures *Leonore No. 2* and *No. 3*, based on the original overture to the opera, are well known.

Carl Maria von Weber (1786–1826) is looked upon as the founder of the German romantic opera and is best known for his *Der Freischütz* and *Oberon* (commissioned by Covent Garden). All have typically romantic plots: mediaeval gloom, pacts with the devil, and dark woods. The overtures to all three are favourite concert pieces, and popular too is his *Invitation to the Dance*. Much of Weber's music is showy and over-dramatic and is now seldom heard. As Schubert said: "If Weber snares a scrap of melody he is sure to crush it to death like a mouse in a trap by his overwhelming orchestration." He died and was buried in London during the run of *Oberon* at Covent Garden. His body was later removed to Dresden.

The lyrical songs and orchestral music of Franz Schubert (1797–1828), greatest of all song-makers, are known even to those who ordinarily have little interest in music. When he began to compose there were, broadly speaking, two types of song: the operatic *aria* based on Italian pattern and technique, and the simple folksong. Schubert's great achievement was the creation of the *Lied* (plural *Lieder*), a song which was less artificial than the first and more sophisticated than the second. He wrote over 600 songs, including the two great song-cycles *Die Schöne Müllerin* and *Die Winterreise*, set to poems by Wilhelm Müller, Goethe, Schiller, Heine, and others. He also composed, like Beethoven, symphonies, string quartets, and sonatas. Born in Vienna, Schubert died thirty-one years later, hardly recognised, sick with typhus, and in dire poverty; his sole remaining possessions were his clothes and what his brother described as "some old music." The "old music" included the Unfinished Symphony and the C major, discovered by Schumann some time after his death.

Schumann, Mendelssohn, Chopin, and Liszt.

Robert Schumann (1810–56), Felix Mendelssohn (1809–47), and Frédéric Chopin (1810–49), all born within a few months of each other, represent romanticism at its purest. They worked in smaller forms, especially in solo music for the piano. Schumann is probably best known now for his songs and piano pieces. As a critic he exercised great influence and always supported the young composer experimenting in new forms. As he said, "It is characteristic of anything unusual that it cannot be easily understood; the majority is always tuned to the superficial." When we reflect on how few really great artists, composers, or writers have received the Nobel Prize, the Order of Merit, or burial in Westminster Abbey (or their equivalents), how few great poets have become Poet Laureate, we can see the justice of Schumann's aphorism. He was the first to see the genius of the young Brahms. Schumann's wife Clara was also a brilliant pianist and herself a composer. Mendelssohn composed many works, but best known are his overtures *A Midsummer Night's Dream*, *Fingal's Cave*, his songs, and the two oratorios *St. Paul* and *Elijah*. He frequently visited England, and Queen Victoria thought highly of his work. It is difficult to judge the works of Chopin, just as it is difficult to judge the poems of Robert Burns, and for the same reason. Both are national artists who appeal to people ranging from the highly intelligent and knowledgeable to the lunatic fringe who are more concerned with nationalism than with art. Suffice it to say that Chopin was undoubtedly the greatest composer for the piano who ever lived and is best known for his preludes, mazurkas, impromptus, and nocturnes (a form modelled on those of the Irish composer John Field (d. 1837)). In Poland he remains the great composer of his country. The compositions of Franz Liszt (1811–86), the greatest pianist of the age, are highly romantic and he had a great influence on younger composers. His daughter Cosima became the wife of Wagner.

This was also the age of great virtuosos in musical performance. Previously the movements of the virtuoso had been restricted by the difficulties of travel, but by the beginning of the 19th century there were stage-coach routes over most of Western Europe which made it possible to get fairly quickly from one city to another throughout the continent. Liszt, the pianist, Paganini, the violinist, whose favourite trick was to cut three strings of his instrument and announce, "now you will hear Paganini on *one* string!", Jenny Lind, the Swedish singer—were they as good as their enthusiastic audiences believed? We do not know, although it is obvious that Paganini was highly melodramatic whatever his ability as a violinist. Music at this time was the art without a knowledge of which nobody could enter cultured society.

Romantic Opera: Wagner, Gounod, Bizet, Berlioz, Verdi, Puccini.

Richard Wagner (1813–83) was both the greatest composer of operas and one of the most unpleasant men of his time. He was, in a sense, with his one-time friend Friedrich Nietzsche (whose "superman" philosophy is expressed in *Thus Spake Zarathustra*) one of those who supplied the emotional background on which the Third Reich of Hitler was founded (he was, with Lehar, Hitler's favourite composer). Wagner was violently anti-semitic; he abused, lied about, and persecuted most of the people he met—especially when they were Jews. Those who do not care for Nordic mythology may find Wagner's operas tiresome; but his importance in the history of opera is that he changed it from a formal affair with set pieces, solos, or choruses, to a dramatic unity which went right through from beginning to end like a play. Ludwig II, the mad king of Bavaria, fortunately for Wagner and for us, financed his operas, notably the series *Ring des Nibelungen* and *Parsifal* (both based on early works already mentioned), which were and still are performed at their best in the centre of Wagnerian opera, Bayreuth.

French opera is represented by the sentimental Charles Gounod (d. 1893), whose *Faust* and *Romeo and Juliet*, popular in Victorian times, are still performed today, and the much more important composer Georges Bizet (d. 1875), whose *Carmen* was beloved by Nietzsche after he had inevitably quarrelled with Wagner. Hector Berlioz (d. 1869), another romantic composer, wrote the dramatic cantata *The Damnation of Faust*. But the greatest composer of operas, after or together with Wagner, was Giuseppe Verdi (d. 1901), whose *Rigoletto*, *Il Trovatore*, *Aïda*, and *La Traviata* are famous. An eminent musician once said that the Italians, reputedly a musical nation, are not really infatuated with music in general but with Italian opera, which is to them as football is to the English or bullfighting to the Spanish. This is a controversial point on which the reader must form his own opinion, but it is undoubtedly true that the old gulf between Italy and Northern Europe which was noted earlier in relation to architecture and painting exists also in the field of music. The Germans (Goethe, Thomas Mann) have always had a romantic eye turned towards Italy, but culturally the glance has not been reciprocated by the Italians. The Wagnerian technique in which orchestra and singers are tightly welded together as a unity and the action runs on smoothly without set pieces was used by Verdi in his old age in the Shakespearean operas *Falstaff* and *Otello*. The only other Italian composer of operas we can mention here is Giacomo Puccini (d. 1924), whose *Madame Butterfly* and *La Bohème* are known—at least in part—to everyone. Puccini was a brilliant composer who, by his sentimentality, just missed being a genius. On the whole, the other composers of Italian opera, however popular, are negligible. Verdi and Puccini are giants amongst pygmies.

The Beginnings of Realism.

The periods into which we have artificially divided our short account cannot be dove-tailed smoothly together. Nevertheless, there are attitudes typical of an age, and tastes in art have changed roughly as we have described them. By the end of the 19th century romanticism was dying and realism was taking its place; yet realism in French painting may be said to have started with Courbet during the mid-nineteenth century, in his revolt against Delacroix; realism in English literature with Thomas Hardy (d. 1928). But, although Robert Louis Stevenson, a great romantic if ever there was one, died in 1894, another, Rudyard Kipling, died in 1936. Of French novelists Balzac was surely a realist, as was Stendhal (pen-name of Henri Beyle), author of *La Chartreuse de Parme*, yet both died in the middle of the 19th century. Gustave Flaubert (1821–80) wrote one of the world's great novels in *Madame Bovary*, which coldly dissects the personal relationships of village life; but his other novels such as *Salambo* were romantic in trend. *Madame Bovary* is one of the many works regarded as scandalous or obscene in their time which are now unquestioningly accepted. The works of Emile Zola (d. 1902), designed to relate the history of a Second Empire family (*i.e.*, the period between 1852 and 1870), were also regarded as scandalous but widely read. *Les Rougon-Macquart* is a series of 20 novels describing the decay of a family as a result of heredity and environment and include *L'Assommoir*, on alcoholism and slum conditions, and *Germinal*, on coal-mining in northern France. Anatole France (d. 1924) was the complete sceptic, and his *Penguin Island* and *The Revolt of the Angels* satirise religion and politics.

But the harsh materialism of the time did not appeal to everyone, and a group of French poets who described themselves as "Symbolists" began to write verse which, instead of making literal statements, attempted to create moods by a kind of word-music. This was not entirely a new idea, since John Donne in the 17th century had written:

> "Go, and catch a falling star,
> Get with child a mandrake root,
> Tell me, where all past years are,
> Or who cleft the Devil's foot."

A lovely verse which has no clear-cut meaning.

Stéphane Mallarmé (d. 1896) was at the head of this movement, but the greatest symbolists were Paul Verlaine (d. 1896), his friend Jean Rimbaud, all of whose verse was written before the age of nineteen, Charles Baudelaire (d. 1867), whose *Les Fleurs du Mal* was regarded as obscene, and in England Algernon Swinburne (d. 1900). Baudelaire and Rimbaud are two of the finest French poets. In music, Claude Debussy (d. 1918) introduced musical impressionism, and his original ideas found exquisite expression in works such as *L'Après-midi d'un Faune* and *La Mer* where the structure of the music seems to dissolve into atmosphere. Oscar Wilde (d. 1900) was influenced by the impressionist movement, but his poetry is of less account than his witty plays: *The Importance of Being Earnest*, *Lady Windermere's Fan*, and others.

THE APPROACH OF THE 20TH CENTURY.

The Social Background.

The immediate influences leading up to the arts of our own time can be traced back to two main sources: The French Revolution and the beginnings of the Industrial Revolution in England. In the long run, at first slowly and then with ever-increasing speed, these events brought about the decay of the old order of landowning aristocracy and its traditions, the rise of a commercial middle-class, and an improvement in communications between one country and another. People became more mobile, both geographically and socially, and the new momentum of technical development put an end for ever to the old static type of society, which had changed little over hundreds of years. These developments had their necessary repercussions upon the artist: (1) his patron—in mediaeval times the Church and later the aristocracy—was gone; (2) his style, which had formerly been set for a whole period of history, became fluid, and there were many conflicting styles, depending only upon the judgment of the artist himself; (3) his subjects had to appeal to a larger social group which had little interest in aristocratic portraits or even in the classics. How he responded depended upon his own attitude towards the changes. He might defiantly look back towards the past, seek refuge in romantic fantasy, or realistically depict what he saw, and all these trends are to be seen in that most sensitive barometer of the arts since the Italian Renaissance—the French schools of painting.

We have already mentioned (G53–54) the neo-classicists represented by David and Ingres in the early part of the 19th century, the romantics represented by Delacroix, whose emotionalism and use of colour so shocked the conservatives, and the realists headed by Millet, who painted ordinary people, although in a way most of us today would regard as sentimental. Two other trends became apparent, particularly in England—a new interest in landscapes for their own sake and not, as in earlier times, merely as a background, and a taste for the appallingly sentimental and vulgar. Pseudo-classical subjects became

the excuse for thinly disguised eroticism; every picture had to "tell a story," and children, dogs, and horses were made to take the viewer's heart by storm with sickly emotionalism. Photographs replaced portraits, coloured reproductions original paintings, and architecture was orientated towards the past. Small wonder that the artist, unless he was prepared to pander to popular demand, felt neglected, and towards the end of the century began to raise the cry of "art for art's sake."

The Modern Reaction. As the 20th century dawned other factors had an ever-increasing influence: the rise of nationalism among the economically backward nations; the rise of the working classes; the increase in scientific knowledge, which introduced new materials and processes and a new understanding of the nature of colour-vision; Freud's insights into the workings of the depths of the mind; and the possibility of cheap literature. The general movement towards one world brought about by modern methods of travel had led the more advanced nations to become internationally minded at the very time when the breaking-up of empires led to a vociferous nationalism among the technically backward ones. From the end of the 19th century an interest in folk-tales and folk-music became almost a badge of patriotism in the revolt of the Irish against England, and the Czechs, Hungarians, and Poles against the Austro-Hungarian monarchy. Dying languages, such as Irish and Hebrew, were brought into everyday use, and others, such as Norwegian and Finnish, were refurbished to rid them of foreign elements. In music and literature Europe was becoming more, rather than less, polyglot. Moreover, these nationalist uprisings received support from the international socialist movement, and after the Russian Revolution of 1917 the Communist Government tended to encourage regional nationalism in culture, with the result that its official attitude towards art became essentially the Tolstoyean one that art should be judged: (*a*) by its moral effects in promoting the "correct" political and social attitudes among the masses, and (*b*) by its ability to transmit understanding to the masses. Art, it was held, wells up from the people, and the message it conveys must be both readily comprehensible and morally edifying; when it looks to the past, is difficult to understand, is abstract, or instils values contrary to Marxist thought, it becomes "bourgeois" and "decadent." True art begins as folk-art.

In Western Europe events took a different course; for although interest in folk-art was not lacking, it could have little patriotic or political appeal to long-established and basically democratic nations, like Britain and France. It remained one strand among many, and by the beginning of the century had been largely exhausted by the paintings of the Barbizon school (**G54** (1)) and the literary works of Zola. Naturalism and literal realism were abandoned, not for any sinister or reactionary political reasons, but because it came to be felt that they were essentially dull and set unnecessary limitations upon the artist. The new movements wanted to experiment, and the history of modern art, excluding music, is very largely the history of French painting, which, as it were, formed the backbone of the revolt. Not that French music was unimportant, but on the whole the trends in modern music have been set in Eastern and Northern Europe. Literature in Britain, France, and Germany experimented along much the same lines as painting, showing tendencies which might be realist, surrealist, impressionist, symbolist, or near-abstract.

The Impressionists.

Impressionism was a movement away from the realism of Courbet which had caused a sensation at his privately organised "Pavillon du Realism" during the World's Fair Exhibition at Paris in 1855. Dark colours were replaced by light; solid modelling by an appearance of flatness; near views which emphasised form, by distant out-of-doors ones emphasising the interplay of sunlight and atmosphere. The large canvases of the classicists, which had often taken years to complete and emphasised detail, were replaced by smaller ones, which selected from nature and appeared to be sketchy improvisations rather than literal transcriptions. The artist had noted a particular aspect of his subject and repeated it until he had arrived at the desired effect, the total impression being one of movement and sunlight caught as in a snapshot seen through half-closed eyes—hence the name of the school, which was taken from Claude Monet's picture *Impression: soleil levant*. Patches of light and shade with few and simple outlines were characteristics deriving from the Japanese wood-block prints of Hokusai (d. 1849) and Utamaro (d. 1806).

In the broadest sense, impressionist techniques are to be found in the works of Whistler, Sargent, Turner, Constable, and even Rembrandt, but the French movement, which specialised in the use of bright unmixed colours, and was influenced by the theories of the physicist Helmholtz relating to the nature of colour vision, was led by Monet, Sisley (a French painter of English origin), and Pisarro. Other artists who, without subscribing to the principles, made use of the technique were Renoir, Degas, Manet, and the early post-impressionists Cézanne, van Gogh, and Gauguin.

Monet, Manet, Renoir, Degas. Claude Monet (1840–1926), a landscape painter, found greater interest in the quality of light than in the objects reflecting it, and frequently painted series of pictures of the same object under different lighting conditions, as in his twenty studies of Rouen Cathedral. His *Madame Monet under the Willows* is a blurred figure surrounded by green meadow, dappled sunlight and shade, created by the direct application of paint from the tube and brush strokes. Edouard Manet (1837–87) aroused a storm of criticism with his *Déjeuner sur l'herbe*, which was a modern version of *The Concert*, by Giorgione, the painter of the High Renaissance (d. 1510). His many subjects included portraits, horse-racing, boating scenes, landscapes and interiors, and still-lifes, but all had the quality of snapshots without any single focus of attention, taken as it were by surprise in a split second of time. The nude on a couch being presented with flowers by a Negro maid in his *Olympia* (Louvre) was attacked on the grounds that her expression was stupid and she was too naked. He was defended by Zola.

August Renoir (1841–1919) was at first a decorator of porcelain, and his light and airy canvases, the pinks, ivory, and pale blues of his nudes recall this early interest. His view of life is uncomplicated and charming. Well known to Londoners are *Les Parapluies* (National Gallery) and *La Première Sortie* (Tate Gallery). Edgar Degas (1834–1917), an admirable draughtsman and painter, gave up his brushes to work in pastel. His interest lay in scenes of everyday life, especially the ballet, theatre, and race-course. The close connection between impressionist painting and the other arts is seen in the sculpture of Rodin and the music of Debussy.

The Post-impressionists: Cézanne, van Gogh, Seurat. Paul Cézanne (1829–1906) exhibited with the impressionists but came to feel that their pictures lacked form and solidity. He admired the grandeur, harmony, and three-dimensional quality of Poussin and the old masters, but wanted, on the other hand, to start painting all over again in a style that would owe nothing to others. His claim that all forms in nature could be seen as cylinders, spheres, and cones was later to influence the cubists, but his real wish was to make of impressionism "something lasting like the art of the museums." A stubborn and eccentric man, Cézanne retired to Aix on a small allowance from his father and concentrated on developing a style with a frustrated intensity that ignored such material considerations as finishing, exhibiting, or even selling his canvases. Yet, like Giotto six centuries earlier, it was he more than any other artist who determined the future course of European painting.

Vincent van Gogh (1853–1890), son of a Dutch pastor, worked as a lay preacher with the miners of Belgium and spent some time in England. He

never grew up emotionally and remained all his life tied to his brother Theo; he became insane and shot himself after leaving a mental hospital. His works, unappreciated in his lifetime, show an intense emotionalism revealed in brilliant colours and a forceful but simple technique; they retain the freshness of the impressionists without their rather fragile delicacy. Paul Gauguin (1848–1903) lived with van Gogh at Arles until he was attacked during one of the latter's periods of insanity, when he went to Paris and, two years later, to Tahiti, where he died of ill-health and poverty. A successful stockbroker, without artistic training, he left his family in middle-age to become a "barbarian" painting the pictures of natives in the South Seas by which he is best known.

PAINTING IN THE 20TH CENTURY.

"Post-impressionism" was a term orginated by Roger Fry to describe the paintings in his London exhibitions of 1910–12; they included works by Manet, Cézanne, van Gogh, Seurat, Matisse, and Picasso. However, most authorities today would assert that this revolt in favour of colour, form, and solidity was primarily the work of Cézanne, van Gogh, and their contemporaries Seurat, Gauguin, the later Renoir; that it was followed by fauvism and cubism. The best collections of impressionist and post-impressionist paintings in Britain are at the Tate Gallery and the Courtauld Institute in London.

Another movement away from impressionism which is best regarded as an aspect of post-impressionism was the neo-impressionism of the painters Georges Seurat (1859–1891) and Signac, who in the 1880s devised the method of painting known as *pointillism*. Small spots of pure colour were arranged in a mosiac on the theory that complementary colours seen at a distance fuse within the eye of the observer to produce a purer and more luminous result than would be the case if they were mixed (*e.g.*, spots of blue and yellow will appear as green). One of the best-known examples of this technique is Seurat's *Sunday Afternoon on the Grand Jatte*, familiar from reproductions, although the original is in Chicago. The movement was short-lived, and its excellent results were due more to the fact that Seurat was a fine artist than to his method.

The Fauves: Matisse, Vlaminck, Rouault, Braque, Dufy, Derain. The *fauves*, or "wild beasts," was a name contemptuously given to a group of painters who exhibited at the Salon d'Automne in Paris in 1905 because of their violent use of colour and apparent neglect of drawing. Like the post-impressionists, they were in revolt against the delicacy of the impressionists and had, in fact, learned much from the former, notably from van Gogh and Gauguin. There was a kind of hysteria in the air far removed from the old academic standards and exemplified by such remarks as van Gogh's "I am trying to exaggerate the essential," Gauguin's "A kilo of blue is bluer than a half-kilo," Cézanne's worry lest his still-life of green apples should look too "horribly resemblant to life," and Toulouse-Lautrec's relief that "at last I have forgotten how to draw." Like all the French schools of this time, the fauves were influenced by Helmholtz' theory of primary and complementary colours, which implied that whereas yellow and blue, red and yellow, spots will fuse on the retina of the eye to make green and orange respectively, masses of blue will look bluer next to orange and red redder next to green. The fauves omitted shadows and often used heavy black outlines to show form; their works were flat and sometimes distorted; all nature was seen in brilliant colours but without sentiment. Leader of this movement was Henri Matisse (1869–1954), whose *Woman with the Hat* shocked everyone and led to the appearance of posters announcing "Matisse rend fou"—Matisse drives people mad. Matisse experimented in various styles for a while, and when he died in 1954 he was the greatest and most admired painter of contemporary France, an acknowledged genius in his own lifetime. His work, relaxed and decorative, was inspired not only by Gauguin and van Gogh but also by Byzantine mosaics, Persian and Oriental art generally, the Negro sculpture which was exciting interest at that time, and Turner's paintings, which he visited London to see. Among his paintings are *Odalisque with Raised Arms*, *Egyptian Curtain*, and *Odalisque with a Tambourine*; the decorations in the little chapel at Vence in the south of France are well known to visitors. Other members of the movement were Maurice de Vlaminck (d. 1958), Georges Rouault, Georges Braque, Raoul Dufy, and André Derain. Both Braque and Rouault, like Matisse, have decorated chapels, the former at St. Dominique near Dieppe, the latter at Assy; all were commissioned by Père Couturier a modern-minded Dominican friar.

Toulouse-Lautrec (1864–1901), like Gauguin and van Gogh, is familiar to many through popular biography and films. Belonging to no particular school, he is the illustrator of the *fin-de-siècle* night-life of Paris in his pastels and paintings, and creator of the modern poster.

Cubism: Matisse, Braque, Picasso. Modern art as we know it today derives from three artists who were painting in Paris between 1905 and 1908: Matisse, Braque, and Picasso. Braque and Picasso were the originators of cubism, a geometric-abstract style deriving from Cézanne's concern with solidity and form which led to a reduction of natural shapes to their fundamental geometric ones. Picasso's *Young Ladies of Avignon*, the first cubist painting, shows the influence of African Negro sculpture as does his *Head* of 1909, the first piece of cubist sculpture. Cubism passed through various phases from the early "analytical cubism," through the development known as "simultaneity," in which different views of an object were shown in the same composition (*e.g.*, full-face and profile) and colour and the third dimension were eliminated, to the "synthetic" or "college" phase of 1913, in which pieces of paper and other materials were used in addition to paint. Other painters in this movement were Gris, Duchamp, Gleizes, and Jeanneret (Le Corbusier the architect), and among sculptors Brancusi, Archipenko, Belling, and Lipchitz. Georges Braque, born near Paris in 1882, is still one of the greatest living painters, best known perhaps for his still-life studies Pablo Picasso, son of a professor at the Barcelona Academy of Fine Arts, was born in 1881 in Malaga, but has lived in France since 1903. His work is universally known, as is his early friendship with the American writer Gertrude Stein, his left-wing views, and the dove, guitar, and bull motifs of many of his paintings. Perhaps the best-known single work is his mural *Guernica* (1937), but the paintings in many styles, his etchings, sculpture, and ballet decor also make up his enormous output. His influence upon modern art has been somewhat analogous to that of Cézanne fifty years earlier.

Abstract and Non-objective Painting: Mondrian, Kandinsky, Klee. Painting from the time of Cézanne showed two fundamentally different approaches: his own severely intellectual and geometric one, which led to cubism and the various forms of abstractionism, and the free and emotional approach of van Gogh and Gauguin, which led, by way of the fauves, to expressionism (an essentially German movement) and surréalism. The Dutchman Piet Mondrian (d. 1944) was one of the most intellectually extreme cubists, but neither Picasso nor Braque totally eliminated all resemblance to reality. Abstract art in so far as it insists on the importance of form and colour and ignores content is, of course, the very oldest type of art and, in Moslem countries, the universal one; but its modern expression derives from the rejection of naturalism with the advent of photography, which freed the artist to attempt something other than mere reproduction. A further justification was found in Plato's dictum that "straight lines and curves and the surfaces of solid forms" are not beautiful relatively like other things but "always and naturally and absolutely."

The most extreme abstractionists were the Dutch neo-plasticists of De Stijl movement

founded in 1920 by Mondrian; the Russian constructivists led by Pevsner and Gabo, who gave up painting in favour of complex figures built from paper, cardboard, wood, and metal; the French abstraction-creation movement; the British painters Ben Nicholson (b. 1894) and Wadsworth; and the German abstractionists, represented by the Russian-born Wassily Kandinsky, whose work from 1923 became completely abstract and latterly even dispensed with titles. Most of these are represented at the Tate.

Wassily Kandinsky (1866–1944) was born in Moscow but trained in Munich. His first purely abstract painting dates from 1911, so he was one of the founders of this movement. Between 1914 and 1921 he returned to Russia, but subsequently taught at the Bauhaus in Weimar, and in 1933, following its closure by Hitler, went to France. The *Blaue Reiter* circle, founded in 1911 by Kandinsky, Klee, and Franz Marc, had the aim of bringing art to the people. Paul Klee (1879–1940) was a Swiss whose water-colours and drawings are reminiscent of those of children, but their simplicity is only apparent, covering considerable sophistication. In this country his works are perhaps better known to art-lovers than those of Kandinsky.

Expressionism: Munch, Kokoschka. Expressionism, with its roots in French post-impressionism and particularly in the works of Gauguin, van Gogh, Rouault, and Matisse, was in its later developments essentially a German movement. As noted above, it was the emotional rather than the intellectual reaction to the naturalism of the impressionists. As the name implies, its approach was subjective and imaginative, and among its practitioners were members of *Der Blaue Reiter* group and the group known as *Die Brücke* founded in Dresden in 1905 by Edward Munch (d. 1944), who first used the title *Expressionismus*. Primitive art was another source, but later the most obvious inspiration was the suffering of the German proletariat as seen in the lithographs, etchings, and woodcuts of Käthe Kollwitz, wife of a physician in post (first)-war Berlin, and the savage cartoons of George Grosz (d. 1959). Oskar Kokoschka (b. 1886), an Austrian, taught at Dresden, and was influenced by the Brücke group. He came to England, where he remained from 1935 to 1953. A widely travelled man, his landscapes, city views, and portraits have a wider appeal than some of the other artists mentioned; his style is vivid, imaginative, and highly personal.

Futurism: Balla, Severini, Boccioni. An Italian contribution to modern art, futurism is a term sometimes wrongly used to apply to modern art in general, although it was in fact a movement originated in 1909 in Paris by the writer Marinetti (d. 1944), whose futurist manifestos glorified war and the machine. This mountebank and subsequent friend of Mussolini proclaimed that "a roaring motor car, which runs like a machine-gun, is more beautiful than the *Winged Victory of Samothrace* . . . we wish to glorify war." Although a number of Italian painters and sculptors held exhibitions in Paris, London, Berlin, and elsewhere, causing thereby considerable outcry and scandal, the movement for all practical purposes died during the First World War. The distinctive feature of the work of such artists as Balla and Severini and the sculptor Boccioni was an attempt to express motion by the principle of "simultaneity," in which a figure was shown in a series of successive positions as in the *Nude Descending a Staircase*, by Marcel Duchamp.

Dada and Surrealism: Duchamp, Arp, Dali, Max Ernst, Chirico, Chagall. Dada began in a cabaret in Zurich as a product of the hysteria and nihilism accompanying the First World War; it was by intention anti-art and anti-intellect, setting out to scandalise and shock. Hence Duchamp's reproduction of the Mona Lisa with a moustache and an obscene caption, and the genuine bottle-drier and bicycle-wheel bearing his signature. At an exhibition in Cologne in 1920, held in an annexe to a café lavatory, the spectators were provided with a chopper to smash the exhibits, and the collages of Hans Arp (b. 1888) consisted of bits of coloured paper cut out at random and shuffled. By 1922 the movement had given rise to surrealism, which combined its nihilism and Freudian insights with the collage and constructivist aspects of cubism.

Its Freudian aspect is best seen in the work of Salvador Dali and André Breton, a French dadaist poet who had derived the title of the movement from another poet, Guillaume Apollinaire, who attempted to bring the movement into association with Communism—an attempt which the Communist Party rejected. Dali (b. 1904), in Spain, combined an academic technique with such fantastic subject-matter as open drawers projecting from female figures and flabby watches drooping over branches which had a Freudian significance. More recently, considering surrealism Marxist in implication, Dali rejoined the Catholic Church. His works have been immensely popular; but serious critics have not always been so impressed as the general public.

Max Ernst (b. 1891) a German artist, took his subjects from natural materials as the pattern of the grain in wood or of veins in leaves. In some of his works the pages of technical and scientific catalogues with illustrations of machinery or apparatus are provided with backgrounds so that machines appear standing in a desert. Similar effects are found in the lonely, sunlit landscapes of Giorgio di Chirico, an Italian born in Greece in 1888, which sometimes have unexpected objects displayed in the foreground. The deliberate search for the unexpected, seen also in Klee, whose abstracts were often given irrelevant titles (*e.g.*, *The Twittering Machine*), and the later Picasso, is typical of surrealism which aimed to be "beautiful as the chance encounter of a sewing-machine and an umbrella on an operating table" in the simile of Lautréamont.

Marc Chagall (b. 1887), not himself a surrealist, had a considerable influence upon the movement, with his poetic fantasies, unusual juxtapositions, and highly imaginative style. Born in Vitebsk, trained in St. Petersburg, where he came under the influence of Bakst and the Russian Ballet, Chagall was made Commissar of Fine Arts in his home area after a brief stay in Paris when he was interested in the cubists. After political disagreements he resigned and came to Paris once more in 1923, and from 1941 to 1946 lived in the United States. His dreamy and evocative fantasies of Russian village life in rich colours have latterly given place to religious subjects in which the Byzantine influence is strong.

Tanguy, Miro, Le Douanier Rousseau, Modigliani. Other noted painters in the surrealist tradition are Yves Tanguy, whose landscapes filled with unreal creatures bear titles such as *Four O'clock in Summer* and *Mamma, Papa is Wounded*, and Joan Miro (b. 1893), whose playful and childlike *Circus* and other works link him with the primitives. The latter term has been used, as explained elsewhere, to denote: (1) the art of technically primitive cultures; (2) the art of Netherlandish and Italian painters before 1500; (3) the "art" of amateur and technically incompetent French and American painters whose lack of sophistication has been accounted a virtue by some. In this third sense the main exponents have been the genuine primitives of the early 19th century, the Douanier Rousseau, and the modern American "grandma" Moses, but their many imitators beguile only the pseudo-sophisticated. Henri Rousseau (1844–1910), called "Douanier" because of his position in the Customs service, was an amateur "Sunday" painter and had allegedly served as regimental bandsman in Mexico, where he is said to have obtained his exotic settings. His tropical forests with wild beasts, tapestry-like foliage, and sleeping figures are universally popular, both with those who have little culture and those who have too much.

Surrealism has had an immense influence, not only in painting but also in literature, the theatre, the cinema, photography, and even shop-window dressing and advertising, where its juxtapositions of apparently unrelated objects has been widely

used. If its original force has been largely spent, it is more because the movement has become respectable and almost academic than because it has been neglected; surrealist techniques have been generally accepted and no longer shock. Although essentially of the 20th century, its long and reputable ancestry can be traced into the past from Bosch, Fuseli, and Goya, together with many others who depicted the fantastic and dream-like.

Amedeo Modigliani (1884–1920), of Italian-Jewish family, was born in Leghorn, and although his work shows the influence of cubism and Negro art, his unique style came most of all from his Italian heritage, its purity of form reminiscent of the Florentine Renaissance. The greatest Italian artist of the century, his work is as truly of his country as Chagall's is of Russia, in spite of the fact that most of his working life was spent in Paris. The elongated figures and light tints of orange, black, blue, and green contribute to his distinctive style.

British Painting in the 20th Century: Whistler, Steer, Sickert, Augustus John, Sutherland, Nash, Spencer. James McNeill Whistler (d. 1903), although an American, spent most of his life in England, and was strongly influenced by the impressionism of Manet, whose pupil he had been. The famous portrait of his mother is now in the Louvre, and the almost equally well-known *Nocturne in Blue and Silver: Old Battersea Bridge*, along with other pictures is in the Tate. The most important British impressionists were Wilson Steer (d. 1942) and Walter Sickert (d. 1942). Steer's landscapes have been described as Constable revivified by impressionist technique, but Sickert's paintings of the shabbier parts of London and music-hall scenes possess a sombre tone which is unlike most impressionist art. The so-called Camden Town group, which later became absorbed in the London group, was founded by Sickert. Both these painters are well represented both in the Tate and in many provincial galleries. Augustus John's rather self-conscious Bohemianism has not prevented his acceptance as a brilliant portrait painter in a traditional style modified by post-impressionism. The American John Sargent (d. 1925), who was born in Florence, was a fashionable portrait painter, perhaps less heard of today, when the more revolutionary techniques of Graham Sutherland, seen in his portraits of Somerset Maugham, Beaverbrook, and Churchill, attract general interest. Sutherland (b. 1903), one of the finest living British abstract painters, used a semi-abstract technique in his paintings of war-torn landscapes; his religious works include the *Crucifixion* commissioned for St. Matthew's, Northampton. Paul Nash (d. 1946) exhibited with the surrealists in Paris and, like Sutherland, was an official war artist in the last war. He is probably best known for his landscapes and book-illustrations, but perhaps one of the most original and English of our artists was Stanley Spencer, who died in 1959. His religious paintings, in modern dress and often located in his own village of Cookham (*e.g.*, *Resurrection, Cookham*, a huge work now in the Tate), caused some offence, and the apparent distortion of the figures aroused perplexity, but in fact his style derives from the naïve religious feeling of the Gothic artists and William Blake. Before his death Spencer was knighted and received back into the Royal Academy. Some of his finest works are the mural decorations in Burghclere Chapel, Berks.

SCULPTURE IN THE 20TH CENTURY.

Sculpture in the past two centuries has had to face much the same problems as painting: the loss of the aristocratic patron and his replacement by wealthy but untutored individuals, who either had no interest in art at all or a rather conventional and sentimentalised one. But the sculptor was in a worse position than the artist, in that his materials were more costly and his work more exclusive. Few people can do without pictures, but most expect to see their sculpture on public buildings rather than in the home. Yet the trend in architecture, compared with earlier periods, was towards austerity and against decoration, and bureaucrats tend to play safe in sculptural design when the need arises. However, the movements in painting had an influence upon the sculptor, and many painters, such as Picasso and Modigliani, were also sculptors.

In the 19th century neo-classicism, which had produced David and Ingres, produced the neo-classic sculptors Bertel Thorwaldsen (d. 1844), the only Danish artist with an international reputation; Antonio Canova (d. 1822), an Italian and perhaps the greatest in this style; and the two Englishmen John Gibson (d. 1866) and John Flaxman (d. 1826). Gibson's bequest to the Royal Academy paid for the building of the Diploma Gallery, where some of his work can be seen. He re-introduced the tinting of statues in the Greek classical tradition. Flaxman's works, which at one time had an enormous reputation, are scattered all over the world, and may be seen in Edinburgh, Glasgow, Westminster Abbey, and St. Pauls. Canova's are mostly in Italy, but also in the Louvre, Munich, Berlin, and Vienna; Thornwaldsen's in Copenhagen in the Museum named after him and in St. Peter's Rome (tomb of Pius VII).

Barye, Carpeaux, Rodin, Maillol, Meunier, Mestrovic. Romanticism found its Delacroix in Antoine Louis Barye (d. 1875), whose dynamic studies of animals are still highly prized. Jean Baptiste Carpeaux (d. 1875), a favourite of the Second Empire, whose work is full of life and movement, is best known for his *Ugolino* in the Tuileries gardens, and *The Dance* on the façade of the Paris opera house. But the greatest modern sculptor was undoubtedly Auguste Rodin (1840–1917). Influenced by Donatello and Michelangelo, Rodin devised the method of leaving part of the rough stone unfinished, from which his figures seem to be emerging. His fame survived a certain amount of public opposition, and his statues are known from photographs or replicas almost everywhere. Among the best known are *The Thinker*, *The Burghers of Calais*, and the statues of Hugo and Balzac. A large collection presented by Rodin himself is in the Victoria and Albert Museum. Aristide Maillol (d. 1944) was influenced by Gauguin's wood-carvings and by his studies of early Greek sculpture. The Belgian sculptor Constantin Meunier (d. 1905) and the Yugoslav Ivan Mestrovic (b. (1883) both have a vigorous style and a sense of the monumental, the former being famous for his great *Monument to Labour* in Brussels.

Brancusi, Archipenko, Hepworth, Moore, Epstein. Constantin Brancusi (1876–1957) was a Rumanian and one of the most abstract of modern sculptors, many of his works consisting of a single polished shape; his abstract tendencies have been followed by Alexander Archipenko (b. 1887), a Russian, now an American, and Barbara Hepworth (b. 1903) of Britain, among many others. Henry Moore (b. 1898), perhaps the greatest living sculptor in semi-abstract style, is British, as was Sir Jacob Epstein (1880–1959), born in New York, but British by adoption, having lived in this country from 1905. Epstein, however, for all the uproar caused by the large statues, was in the classic tradition of Rodin; his bronze portraits are highly regarded, and his later works (*e.g.*, at Llandarf Cathedral and at the Convent of the Holy Child, Cavendish Square, London) aroused admiration rather than the early hostile comment. Moore's sculpture has yet to be widely accepted by the general public, but his *Madonna and Child* in St. Matthew's, Northampton, the Memorial to the Airborne Force at Arnhem, and the statue for the new Unesco building in Paris have been acclaimed by critics.

ARCHITECTURE IN THE 20TH CENTURY.

About the beginning of the century there began a revolution in architecture parallel with that in the other arts. Partly this was due to the desire to escape from the eternal imitations in Gothic and Classical or Renaissance styles, partly to the discovery of new methods and materials which made columns (for example) seem rather absurd

when the reinforced-concrete structure of a building made them functionally unnecessary.

The first reaction against traditional architecture was violent. No ornamentation of any kind was used, and the beauty of the building depended wholly upon the elegance of its proportions; there was a great deal of plate-glass and steel, and the structure was completely functional, eschewing any unnecessary graces. It was not until later that the value of the older materials of brick, stone, and wood, within a concrete setting, came to be understood, first of all by the German Walter Gropius of the Bauhaus school. In 1910 Gropius put forward the idea that there should be no separation between the fine arts, the applied arts, and architecture. In his school at Weimar the staff consisted not only of architects and engineers but also of such artists as Klee and Kandinsky.

Le Corbusier, Lloyd Wright. One of the great architects of this century is the Swiss Le Corbusier, whom we have earlier seen as an artist; he designed the great blocks of flats in Marseilles and many other buildings. But it is to America that we must look for the most powerful influence on world architecture, and there the modern skyscraper of steel construction created by Louis Sullivan was at first bedevilled with past ideas, as in the (1911) Gothic Woolworth building in New York. The most important apostle of modernism was Frank Lloyd Wright (d. 1959), who with others brought into fashion the present-day horizontal strip and all-glass design. Attacked at first for the "eccentricity" of his early designs (the Larkin Building in New York, the Imperial Hotel in Tokio, 1916), Wright, who was at first more appreciated in Europe than in America, gradually converted others by his imaginative solution of each building in an original way (*e.g.*, Kaufmann House), which is projected on cantilevers across a waterfall with holes left in porch roofs for trees to grow through). The design for his last building, the Guggenheim Museum in New York, is based on a spiral.

Modern architecture has led to a kind of universal style, based on Wright and others, which is the same or similar all over the world.

MUSIC IN THE 20TH CENTURY.

In the opening years of the present century Vienna, home of so much great music, was passing through a kind of decadence similar to that of Paris and London. The *fin-de-siècle* mood arose in part from the artist's disillusion, which had led him to preach a gospel of "art for art's sake" (with the implication that it need be for nobody else's), in part from the feeling that a new century should have new means of expressing itself. But in Austria there was a further reason for disillusionment in that the rising nationalist movements within the Austro-Hungarian Empire were already presaging its end. The nationalist fervour among Czechs, Hungarians, and Poles had since the mid-19th century provided a stimulus to music and literature, and the stirrings of revolution in Russia at the turn of the century had a similar effect. There was no disillusionment among these peoples, but rather the reverse, which expressed itself in a revival of folk-themes and a desire to experiment, a movement which led to modern music.

Two men who made it impossible for music ever to return to the techniques of the past were Igor Stravinsky and Arnold Schönberg. The great composers towards the end of the 19th century had been Brahms, Mahler, and Bruckner in Vienna, the Czech nationalist composers Smetana and Dvorak, Dohnanyi the Hungarian, and the French composer Debussy, whose dreamy, and, as it appeared, structureless tone-poems *Prélude à l'Après midi d'un Faune* and *La Mer* and the opera *Pélleas et Mélisande* expressed the new "impressionism." Mahler wrote enormous symphonies, some scored for multitudes of voices. Dvorak's (d. 1904) Slavonic Dances and the *New World Symphony*, which he wrote in New York, are well known, as is Smetana's opera *The Bartered Bride*. Johannes Brahms (1833–97) was a classic-romantic composer in the Beethoven tradition. He composed in all forms except opera, and his four symphonies rank among the greatest ever written.

Although in art nothing is as simple as historians sometimes make it out to be, we can perhaps discern four trends as the century opened: the Brahmsian tradition followed by Bruckner, Mahler, Elgar, and Sibelius (so far as his style is concerned); impressionism as a reaction against traditional harmony, led by Debussy; the experimentalism of Stravinsky; and the revolutionary atonal (absence of key) and largely abstract approach of Schönberg. Among the composers of national music based on folk-themes, some made use of the traditional style, while others (notably Bartok) brought into existence new harmonies. Later in the century Stravinsky was to introduce a neo-classicism which looked to Bach and his predecessors rather than to Beethoven and the romantics.

Schönberg, Alban Berg, Stravinsky. Arnold Schönberg (1874–1951), born in Vienna of Jewish parents, was devoted to the music of Wagner, and his early work, like that of Mahler, emphasised the huge and complex; his *Gurre-Lieder* was scored for vocal soloists, three separate choirs, and an orchestra of 155. The score paper required 65 staves (the five horizontal lines on which music is written; two sets are required in piano music). His symphonic poem *Pelleas und Melisande*, completed a year after Debussy's famous opera, brought a storm of abuse from the critics, one of whom described him as "a man either entirely devoid of sense or one who takes his listeners for fools. . . . Schönberg's opus is not only filled with wrong notes, as Strauss's *Don Quixote* is, but it is a fifty-minute-long wrong note." At this time Schönberg was not aware of having based his music upon any theory which could account for its marked difference from what had gone before, and it was only when he studied both his own works and those of his pupil Alban Berg that he could see its tendencies clearly. It was continuously dissonant, any sort of harmony being deliberately avoided; there was no continuous melody but only a series of fragmented motifs; it was chromatic (*i.e.*, making use of all the twelve notes, white and black, in the scale); its harmony was so contrapuntal that he compared it to that of Bach. To those who regarded tonal music as natural, it appeared intellectualised, mathematical, unemotional, and chaotic.

Although there are still many people to whom Schönberg's music is merely a weird dissonant scraping, sawing, banging, and wailing, his "composition in twelve tones" is increasingly used by composers. In essence it is a rejection of all the traditional Western rules. *Pierrot Lunaire*, his most famous work for song-speech and five instruments, is well known in Britain. In 1933 Schönberg was dismissed from his post as head of the Prussian Academy of Fine Arts in Berlin because of his Jewish ancestry. He went to the United States, teaching first at Boston and then in Los Angeles, where he died. Some later compositions making use of the old tonal system brought about criticism as violent as his most revolutionary atonal ones had done. Schönberg completed only fifty works, and although in twelve years at Hollywood he was a near neighbour of Stravinsky, the two men rarely met.

Alban Berg (1885–1935) is best-known for his opera *Wozzeck* about the degradation and downfall of a soldier, and in this work the twelve-tone scale is used along with traditional forms, such as the lullaby, march, passacaglia, and so on. Now very highly regarded, most people would agree that Berg's music is exactly fitted to the subject and characters of the opera. His emotional links with the past are evident in his two other important works: the *Lyric Suite* for string quartet and his violin concerto. Another of Schönberg's pupils, Anton Webern (d. 1945), was essentially a miniaturist, and one of his works lasts no longer than 19 seconds; he was shot by accident in Vienna at the end of the War.

Igor Stravinsky (b. 1882), son of a singer in the Imperial Opera, St. Petersburg, was a pupil of Rimsky-Korsakov. His first opus, a symphony, was influenced by Brahms, and the second, a song-cycle, by Debussy. In his middle twenties Stravinsky met Serge Diaghilev, the Russian expatriate, then starting the famous Ballets Russes in Paris, who commissioned *The Firebird*. Although clearly in the style of Rimsky-Korsakov, this work already showed the primitivism and savagery of his later works. The second ballet, *Petrushka*, was produced the following year (1911) in Rome, and in this his "polytonalty"—the bringing of foreign chords into a composition—became more apparent. Unlike Schönberg, Stravinsky was using dissonances for the sake of colour and effect in a basically conventional work only different in degree from many of the works of his own teacher and Moussorgsky. The third ballet, *Le Sacre du Printemps*, was presented in Paris in 1913, but this aroused a storm of protest, to the great distress of the composer. Stravinsky rightly described it as a "romantic" work, but for the critics it was an outrage, the "destruction of music," barbarism, and its composer "the apostle of noise." This now popular work strikes the listener as Russian in tradition, Byzantine in colour, barbaric in rhythm as its composer intended, and undoubtedly noisy; we do not disagree with the original critics—it is simply that these qualities are accepted today, whereas then they were not. After the First World War Stravinsky turned his mind to new problems and began to develop a neo-classical style which is characterised by the use of few instruments, thin and intellectual music in an impersonal manner, precision, and conciseness. Among his best-known works in this style are the opera-oratorio *Oedipus Rex*, the octet for wind instruments, and the concerto for piano and wind orchestra. Latterly Stravinsky accepted commissions from jazz bands and the circus (*Ebony Concerto*), and his opera *The Rake's Progress* has been criticised as imitative of Mozart and Tchaikovsky.

Diaghilev died in 1929, and Stravinsky's wife and daughter in the same year. A French citizen since the end of the First World War, Stravinsky left Europe for America just before the Second and, as noted above, lived in California near Schönberg. Among French composers influenced by his first style were Darius Milhaud and Arthur Honneger (of German-Swiss ancestry)—the latter the composer of the notorious *Pacific 231*, which depicts in an ever-accelerating rhythm the journey of an express train.

The Hungarians: Dohnanyi, Bartok, Kodaly. The three great Hungarian composers of the period were Dohnanyi, Bartok, and Kodaly, and their history is in effect the history of 20th-century Hungary. Bartok was a refugee from the Nazis and died in America of leukaemia on the eve of his return to his native land; Kodaly has emerged as the recognised leader of his country's music today and President of the Hungarian Academy.

Ernst von (latterly changed to Ernö) Dohnanyi (1877–1960), in many respects like Rachmaninov, was first noted as an outstanding pianist and as one whose orientation was always primarily towards Western Europe. He received many honours and achieved great worldly success, but his music, which took advantage of the growing interest in folk-themes, was never truly nationalistic as was that of Bartok. Thus, his opera *The Tower of Voivod* (1922), while Hungarian in content, being based on an old folk-ballad, was not in the actual style of his country's music. His works include many solo piano pieces, the *Variations on a Nursery Song* for piano and orchestra, sonatas for violin or cello and piano, and chamber music.

Bela Bartok (1881–1945), like Dohnanyi, was a pianist, and under the latter's influence chose to study at the Hungarian Royal Academy of Music in Budapest rather than at the Vienna conservatoire. Later, however, the two fell out, primarily on political grounds, Dohnanyi, the conservative, obtaining all the important official posts in a reactionary Hungary, Bartok, the radical and nationalist, gaining little official recognition until late in life, when he was permitted as a state-paid official to devote himself to the publication of his collection of folk-music. This was his burning interest, and Bartok visited not only the villages of his native land to collect material but even travelled to Biskra in 1913 to study Arab music; his first book was on Rumanian folk-music. Bartok left for America in 1940, where he lived precariously and apparently unhappily until the end of the War made a return possible—regrettably too late. Bartok's main works are the ballets *The Wooden Prince*, *Duke Bluebeard's Castle*, and *The Miraculous Mandarin*, his violin sonatas and string quartets, his arrangements of Hungarian folk-songs, the violin and viola concertos, and the sonata for solo violin commissioned by Yehudi Menuhin. The apparent modernity and strangeness of Bartok's music arise rather from the asymmetrical qualities of Balkan folk-music than from the imitation of any other composer. His earliest works were influenced by Strauss.

Zoltan Kodaly (b. 1882), a close associate of Bartok, shared an interest in folk-music which he was able to satisfy during a nomadic early life as the son of a state railway official. As a composer he may have been overshadowed by his more successful colleagues. Among his recent offices in present-day Hungary are those of Director of the Academy of Music, Chairman of the Hungarian musicians' trade union, President of the Hungarian Academy, and President of the Anglo-Hungarian Society. Apart from his foundations in the folk-music of his country, Kodaly's music has been said to have been influenced by the two widely different composers, Debussy and J. S. Bach. Among the more important works are the *Psalmus Hungaricus* for tenor solo, chorus, and orchestra; large and small religious or folk-song choral works; numerous piano pieces and songs; a musical play; the opera *Hary Janos*. Kodaly himself directed performances of the *Budavari Te Deum*, the motet *Jesus and the Traders*, and the *Galanta* dances at Gloucester in 1937.

The Russians: Rachmaninov, Prokofiev, Khachaturian, Shostakovich, Shaporin. The Russian situation after the Revolution of 1917 had much the same effect upon composers as the more complex situation in Hungary. There were those who left Russia never to return, like Glazunov, who died in Paris in 1936, Grechaninov (d. 1956), and Rachmaninov (d. 1943), who sought refuge in America. Serge Prokofiev (1891–1953) had a foot in both worlds, but died full of honours in the new Russia in 1953. The leading Soviet composers, Shaporin, Shostakovich, and Khachaturian, had never left their country, and had no difficulty in fitting in with the prevailing mood.

Sergei Rachmaninov (1873–1943) composed music in the traditional manner which aroused few conflicts and was always highly praised. He was also, of course, a conductor and pianist of note, and frequently complained that, like Rubenstein, his fame as a pianist overshadowed his just dues as a composer. In spite of this, his symphonies and piano concertos (not to mention the *Prelude in C. sharp minor*) have remained favourites with musical amateurs. But the tuneful and superficial music of Glazunov, Grechaninov, and Rubenstein has little appeal today. Serge Prokofiev (d. 1953) is remembered for his *Classical Symphony*, *Peter and the Wolf*, and the music to Eisenstein's film *Alexander Nevsky*, although these are by no means his most important works.

Aram Khachaturian (b. 1904), a Russified Armenian, has made use of the melodies of his native land sweeping aside "the scrap-heap of tinsel acquired from Western European sources." He has composed among other works a three-movement symphony, a piano concerto, violin concerto, Armenian soldiers' songs, the ballet *A Song of Happiness*, and an orchestral and choral *Ode to Stalin*.

Dmitri Shostakovich, born in St. Petersburg in 1906, is possibly the most noted Soviet composer, and has composed many works, symphonic,

chamber music, ballets, and operas, including *Lady Macbeth of Mtsensk*, which *Pravda* found to be "all wrong" and lacking in "socialist realism." His Fifth Symphony, autobiographical and essentially programme music, is described by Shostakovich as "The Reply of a Soviet Artist to Merited Criticism"; the Seventh Symphony written during the siege of Leningrad is usually considered to be inferior to his First. The decree of Andrei Zhdanov (1948) attacking "formalism" and commending "socialist realism" seems to result in a type of music which, like Russian paintings and books, differs only in content from 19th-century Victorian art. It is, in effect, the result of accepting Tolstoy's views on the function of the artist. Yuri Shaporin (b. 1889) is unlikely to get into trouble on this account; for his music is for the most part blatantly patriotic and for "the people," taking the form of incidental music for the theatre and cinema and the cantatas *On the Field of Kulikovo* and *A Saga of the Defence of the Fatherland*, which indicate its general tone.

Polish and Scandinavian Composers: Szymanowski, Sibelius, Nielsen. Two outstanding composers highly regarded, both by their own nation and by the world at large, are the Polish composer Carol Szymanowski and the Finn Jean Sibelius. Szymanowski (1883–1937) is regarded in Poland as a worthy successor to Chopin, and his music, which tends to the exotic, has been influenced by folk-music, Debussy's impressionism, and the Arab music which so appealed to Bartok. After a long struggle against tuberculosis Szymanowski died in Lausanne and was buried in the vault for distinguished Poles in the Stalka Church, Cracow.

Jean Sibelius (1865–1957) first studied law at Helsinki University, but his natural musical gifts took him to Berlin and Vienna to study music. He was, like Elgar, a fine violinist. It is doubtful whether it is useful to think of him as a nationalist composer, for although he had strong national feelings and much of his early work was inspired by folk-music and the ballads of the Finnish epic *Kalevala*, he is a composer in the Beethoven–Brahms tradition, his true greatness lying in his originality, and intense imaginative and creative powers. Some regard him as the greatest composer of the 20th century. Songs, tone-poems, together with the symphonies, form the most familiar part of his work; *Tapiola*, the tone-poem, and the *Seventh Symphony* perhaps ranking as the finest. Known to all are *The Swan of Tuenela*, *Finlandia*, and *Valse Triste*. Carl Nielsen (d. 1931) of Denmark, although not so well known in Britain, occupies a place in Scandinavian music second only to that of Sibelius.

French Composers: Milhaud, Poulenx, Dukas, Ravel. French composers have obtained little universal recognition since Debussy, although many of the composers mentioned above have sought refuge in Paris. Of the post (first)-war group known as *Les Six*, whose literary spokesman was Jean Cocteau, only two—Darius Milhaud (b. 1892) and Francis Poulenx (b. 1899) —are at all well known, the former for his opera *Christophe Colomb*, the latter for the ballet-music first commissioned by Diaghilev. Paul Dukas (1865–1933), born of a Parisian-Jewish family and a fellow-student of Debussy, is familiar from his *Sorcerer's Apprentice*, and Maurice Ravel (1875–1937) from his *Daphnis and Chloe* ballet and, of course, the *Bolero*. Ravel, who also worked with Diaghilev and was a friend of Stravinsky, was a Swiss-Basque—the second half of his parentage supplying the Spanish element in his music.

The Spanish composers Manuel de Falla (1876–1946) and Pantaleon Granados (1867–1916) both received training in Paris, but their style is purely Spanish, and both were admirers of the older composer Albeniz, who died in the first decade of the century. The ballets of de Falla *The Three Cornered Hat* and *Love the Magician* are as popular as his piece for piano and orchestra, *Nights in the Gardens of Spain*. The *Goyescas* and *Spanish Dances* of Granados reflect his own ability as a concert pianist. He was drowned on board the *Sussex* when she was sunk by a German submarine.

British Composers: Elgar, Britten, Holst, Delius, Vaughan Williams, Walton. Sir Edward Elgar (1857–1934) composed in the traditional style; his *Enigma Variations*, the two symphonies, the tone poem *Falstaff*, and the oratorio *The Dream of Gerontius* are familiar works. Benjamin Britten (b. 1913) has created a world-wide reputation by his operas *Peter Grimes*, *Billy Budd*, *The Turn of the Screw*, *The Young Person's Guide to the Orchestra*, and the *Sinfonia da Requiem*. He can undoubtedly be regarded as the reviver of the British musical tradition. Gustav Holst (1874–1934), of Swedish descent, was the composer of *The Planets* suite and the opera *The Perfect Fool*, while Frederick Delius (1862–1934), of German descent, is best known by his orchestral pieces *On Hearing the First Cuckoo in Spring*, *Brigg Fair*, *Summer Night on the River*, and the operas *Koanga* and *A Village Romeo and Juliet*. Most English of composers, Ralph Vaughan Williams (1872–1958) was influenced by the French impressionists and by English folk-music. wrote nine symphonies, operas, religious music, the overture *The Wasps*, and set to music many songs, arranged folk-songs and hymns. William Walton (b. 1902), friend of the Sitwells, became first known through his music for *Façade* played to poems composed by Edith Sitwell. His Viola Concerto, played at the Leeds Festival in 1928, resulted in a commission to write an oratorio —the dramatic *Belshazzar's Feast*. Walton has also written chamber music, music for the ballet and for films.

LITERATURE IN THE 20TH CENTURY.

Although it would be an impossible task to list all the important writers of the present century, there would be fairly general agreement as to the most *significant* ones (which, of course, does not necessarily mean the most readable or popular). Of the earlier generation we must include Joyce, Proust, Mann, Kafka, and D. H. Lawrence; of the second, Graham Greene, Silone, Camus, Faulkner, Malraux, and Moravia.

English Novelists: Hardy, Meredith, Kipling, Conrad. In Britain, Thomas Hardy (d. 1928) and George Meredith (d. 1909) are the two novelists of the early period whose works are still read, but both are essentially Victorians. Hardy's reputation may have slightly decreased, but among the sophisticated Meredith's position, after suffering a decline in the inter-war years, is probably more secure than ever. Rudyard Kipling (d. 1936), never popular with the intellectuals, also declined in popularity, but there are signs that he too is being reassessed as a writer of genius rather than as a mere story-teller.

The fact is that Hardy's novels *Tess of the D'Urbervilles*, *The Return of the Native*, *Jude the Obscure*, and many others strike the modern mind as melodramatic in their pessimism, and his epic poem *The Dynasts* is little read, not because it is not a good poem, but because few people today read long poems. Yet his shorter verses are probably more popular than in his lifetime. Meredith, on the other hand, although dealing in his novels *Diana of the Crossways* and *The Ordeal of Richard Feverel* with essentially upper-class and sophisticated people, did so by dissecting their characters in a way which appeals to a more psychologically-oriented generation. Meredith's poetry also makes frequent appearance in modern anthologies.

During the 1930s, when war and imperialism were at a low ebb in Britain except as subjects for satire or bitter denunciation, Kipling came to be regarded as the very incarnation of the "Empire-builder," and only his books for children, *The Jungle Book*, *Puck of Pooks' Hill*, and *Rewards and Fairies*, received attention. Today, when we can look back more dispassionately and even with a certain nostalgia, it is possible to see him as writing with real brilliance

of a bygone era. Even his poems, which had aroused little interest among serious students, have been reprinted in a selection with an introduction by T. S. Eliot. Because literature, whatever other qualifications are necessary, must be produced by people who can write well, irrespective of subject-matter, Joseph Conrad (d. 1924) must remain one of our great writers. His novels of the sea and foreign parts (*Almayer's Folly*, *The Arrow of Gold*, and many others) are unlikely to be forgotten. This extraordinary man, a Pole by birth, joined the British merchant service and, changing his name, spent the rest of his life in England.

Wells, Bennett, Galsworthy. H. G. Wells (d. 1946) was too multifarious as a writer to discuss briefly. His early novels *Mr. Polly* and *Kipps* or *Tono-Bungay*, have a Dickensian flavour, and are obviously autobiographical. The scientific fiction of *The First Men in the Moon*, *The Invisible Man*, and others has presumably been outpaced by their modern competitors. But his great attempt at educating the man in the street (*A Short History of Mankind*, *The Science of Life*, and *The Work, Wealth, and Happiness of Mankind*) was a worthy one, and proved so successful that his imitators have been legion. Wells was a phenomenon of his age, a man born with a faith in progress through science who felt his hopes were gradually being shattered as time went on.

Arnold Bennett (d. 1931) was a very good novelist who brought to his early works (*The Old Wives' Tale*, *Tales of the Five Towns*, *Clayhanger*) the skill of a Maupassant dissecting the life of the Pottery Towns. Unfortunately he also wrote a good many pot-boilers, but hardly deserves the neglect that has fallen upon him. John Galsworthy (d. 1933) wrote plays and novels about the rich English upper middle-class society of his day, most of his novels dealing with the Forsyte family (three trilogies: *The Forsyte Saga*, *A Modern Comedy*, *End of the Chapter*). He received the 1932 Nobel Prize for Literature.

Huxley, Lawrence, Joyce. Aldous Huxley (b. 1894), author of *Chrome Yellow*, *Brave New World*, *Point Counter Point*, *Jesting Pilate*, and many other books, was highly regarded by the intellectuals of the thirties; justly so, since besides being a brilliant writer, his knowledge in every sphere is unexcelled. However, as Wells had moved into cynicism, Huxley moved towards mysticism (*Ends and Means*, *The Perennial Philosophy*), which whilst popular in the perplexed pre-war period cuts—for better or worse—little ice now, when increasingly people seek salvation in technology. In *Brave New World Revisited* Huxley sees his fears justified.

David Herbert Lawrence (d. 1930), a miner's son from the coalfields near Nottingham, wrote novels, poems, and essays (he also translated Verga's novel *Maestro-don Gesualdo*) which are beyond doubt the most important of the half-century. He is acknowledged to be one of the greatest of English novelists since the novel began. Among his many works are *Sons and Lovers*, *Women in Love*, *The White Peacock*, *The Plumed Serpent* (all largely autobiographical), the banned *Lady Chatterley's Lover*, *Aaron's Rod*, the short stories in *The Prussian Officer*, and a considerable body of poems. His apparent obsession with sex and the unconscious elements in man's nature aroused protests, and his rather sensitive nature brought him both passionate friends and enemies. He died of the tuberculosis which had for much of his life sent him travelling from England to Mexico, Italy, Switzerland, and Australia.

James Joyce (d. 1941) also aroused passionate resentments (notably in his birthplace Ireland, which, as in the case of the playwright Sean O'Casey, was torn between native pride and native bigotry). His *Portrait of the Artist as a Young Man* described in more or less conventional prose the conflicts of a youth brought up in a Jesuit seminary, but the banned *Ulysses* shocked many outside Ireland with its peculiar style, its form, based upon the adventures of Ulysses in Homer's *Odyssey*, and its content which described in minute detail 18 hours in the lives of a group of Dubliners, being extremely frank about matters usually confined to the lavatory or the bedroom. His last book *Finnegan's Wake* is written in a totally allusive and surrealist style incomprehensible to the general reader, and even those with a wide knowledge of languages and mythology would find it hard to read more than a few pages a day. Whatever may be the fate of *Finnegan's Wake*, there can be little doubt that *Ulysses* is one of the great novels, but there can be equally little doubt that Joyce went as far in this particular direction as it is possible to go, and the type of word-music found in the former is a literary dead-end. Joyce spent most of his later life in Paris and Zurich.

Virginia Woolf and Lytton Strachey. Virginia Woolf (d. 1941), a member of the "Bloomsbury Set," which also included Clive Bell, the art critic, and Lytton Strachey, was one of the most original writers, whose impressionist technique was employed in understanding human relations and the inner life with little reference to the objective world (*Mrs. Dalloway*, *Orlando*, *The Waves*, *To the Lighthouse*). Lytton Strachey's essay in history, *Elizabeth and Essex*, *Eminent Victorians*, had a considerable vogue and started a long train of historical works "debunking" the great of past times which is still in progress.

Chesterton and Belloc. G. K. Chesterton (d. 1936) and Hilaire Belloc (d. 1953) were the two Catholic writers of the period; Chesterton a convert from Anglicanism, Belloc, his friend, a Catholic by birth. Chesterton was essentially a brilliant journalist who irritates by his eternal use of paradox. His vast output includes novels (*The Napoleon of Notting Hill*, *The Man Who Was Thursday*), essays and poems, biographies of Aquinas, Dickens, and Browning, and the detective stories of Father Brown. Belloc, like Chesterton, wrote poetry, novels, books such as *The Path to Rome*, and what ordinary English Protestants must regard as extremely contentious historical works on Napoleon, Danton, Robespierre, and Cromwell, all of which reveal his religious sympathies and his half-French parentage.

Among the important living novelists are E. M. Forster (b. 1879), whose novels (*A Room with a View*, *Howards End*, *A Passage to India*) have given him great authority in the world of literature; Evelyn Waugh (b. 1903), author of the satirical novels *Vile Bodies*, *The Loved One*, *Brideshead Revisited*, *The Ordeal of Gilbert Pinfold*; Graham Greene (b. 1904), whose novels (*The Heart of the Matter*, *Brighton Rock*), like his plays (*The Complaisant Lover*) and film scripts, deal with moral problems in a modern setting from a Catholic standpoint.

American Prose Writers.

American fiction took a new turn with the novels of Theodore Dreiser, who died in 1945. He discarded Europe, and particularly Britain, and used a native American style. His realist novels (*Sister Carrie*, *An American Tragedy*) portray the seamy-side of life in big industrial cities. He is little read now in Europe, nor perhaps is Upton Sinclair (b. 1878), whose documentary novel *The Jungle* about the Chicago slaughter-yards caused a furore in 1906. Sinclair Lewis (d. 1951) was awarded a Nobel Prize in 1930 for his novels *Babbitt* and *Main Street*, but whatever their historical importance, it is doubtful whether they are still regarded as literature. Other important American writers of the 20th century are Thomas Wolfe (d. 1938), who wrote *Of Time and the River* and *Look Homeward Angel*, J. R. Dos Passos (b. 1896), author of the trilogy *U.S.A.* (1930–36), J. E. Steinbeck (*Tortilla Flat*, *Of Mice and Men*, *The Grapes of Wrath*). Three writers whose reputations have risen since the 1930s are F. Scott Fitzgerald (d. 1940), whose *The Great Gatsby* won him great popularity and is considered his best novel; William Faulkner (b. 1897), author of *As I Lay Dying* and *Sanctuary*

(which brought a Nobel Prize), and now recognised as one of the great writers of the century; and Ernest Hemingway (b. 1898), another Nobel Prizewinner, who has brought into literature a new style and a new type of hero in his novels *Farewell to Arms*, *For Whom the Bell Tolls*, and *The Old Man and the Sea*.

English Verse.

It is impossible to guess which poets of our time will be remembered fifty years hence. But one of the safest guesses would be William Butler Yeats (d. 1939), the great Irish poet and playwright. Rupert Brooke, who died tragically in 1916, may still be the poet of youth, but James Elroy Flecker (d. 1915), whose verse play *Hassan* was performed in the 1920s with music by Delius and ballet by Fokine, is almost forgotten. The verse of Brooke, Rudyard Kipling, and A. E. Housman (d. 1936) will haunt the minds of those born about the time of the First World War, but today we no longer regard war as an adventure as Brooke did, we no longer own, as in Kipling's time, the road to Mandalay. The First World War brought to an end the romantic tradition in poetry. To the "war poets," Siegfried Sassoon (b. 1886), Isaac Rosenberg (killed in action 1918), Edward Thomas (killed in action 1917), and Julian Grenfell (killed in action 1915), war was brutal, futile, and degrading, and in powerful realistic verse these poets expressed their hatred of war. Walter de la Mare (d. 1957) saw the world through the eyes of a child, and in many ways resembles Blake. His lovely verses are likely to retain a place in English literature. A. E. Housman was a professor of Latin at Cambridge and an eminent classical scholar, but is best known as a poet (*A Shropshire Lad*, *Last Poems*).

The poets who aroused interest in the 1930s were experimentalists and realists, many of whom held strong political views in relation to the threatening international situation. Stephen Spender (b. 1909) wrote *Poems*, *The Still Centre*, *Ruins and Visions*, besides fiction and literary and social criticism. Wystan Hugh Auden (b. 1907), who has succeeded C. Day Lewis as Professor of Poetry at Oxford, wrote *The Orators*, *Look Stranger*, and, in collaboration, the verse-plays *The Dog Beneath the Skin*, *The Ascent of F.6*, *On the Frontier*. His *The Age of Anxiety* won him the 1948 Pulitzer prize for poetry. C. Day Lewis (b. 1904) is the author of several volumes of poetry, and has translated Virgil's *Georgics*, while Louis MacNeice (b. 1907), also a classical scholar, in addition to poems, and his translation of the *Agamemnon* of Aeschylus, wrote *Letters from Iceland* in collaboration with Auden. Roy Campbell (1920–1959), born in South Africa, lived much of his life in France and Spain. He fought for Franco in the Spanish Civil War, and his colourful poetry in the volumes *The Flaming Terrapin*, *Mithraic Emblems*, *The Georgiad* reflects his general obsession with blood, bulls, and wild animals. Edith Sitwell (b. 1887), the sister of Osbert and Sacheverell, revolted against the traditional forms (*see* **M2**), and Thomas Stearns Eliot (b. 1888), born in America but a naturalised British citizen since 1927, has graduated all the way from a rebel whose early poems were alleged to be incomprehensible to a highly respected and almost conventional poet with the O.M. His works include *Prufrock and other Observations* (1917), *Poems* (1919), *The Waste Land* (1922), *The Hollow Men* (1925), *Ash Wednesday* (1931), *Four Quartets* (1935–42), and the verse-plays *Murder in the Cathedral*, *The Cocktail Party*, and *The Confidential Clerk*. He won the Nobel Prize for Literature in 1948.

Another important modern poet, read mostly by intellectuals, is Robert Graves (b. 1895), whose *Collected Poems* appeared in 1938 and *Poems, 1938–45* in 1946. Undoubtedly the two most popular modern poets are John Betjeman, who has aroused a new interest in Victorian architecture and achieved the not inconsiderable status of being a best-seller with his poems, and Dylan Thomas, who died in 1953. This fine Welsh poet, since his tragic end in New York, is now more read than in his lifetime; his verse play *Under Milk Wood*, his shorter verses (*Fern Hill*, *Do not Go Gentle into that Good Night*), and his autobiographical sketches in *Portrait of the Artist as a Young Dog* at this short distance of time seem important.

American Verse.

In American poetry we have to retrace our steps to Emily Dickinson, who died in 1886. This extraordinary recluse produced some very great short poems and is now becoming recognised at her true worth. Ezra Pound (b. 1885), a scholar, who has an immense knowledge of world literature has made, in addition to original verse, translations from Provençal, Chinese, Latin, Italian, and other languages. One of the most popular American poets now living is Robert Frost (b. 1875), who writes in a simple manner of country life; among his poems are *Birches*, and *Stopping by Woods on a Snowy Evening*. Other well-known poets are Carl Sandburg (b. 1878), Edwin Arlington Robinson (d. 1935), and E. E. Cummings.

EUROPEAN WRITING.

German Literature. We have seen how Germany produced no great novelist up to the end of the 19th century, and specialised in lyric poetry and the short-story form. Yet in the 20th century she can claim perhaps more great novelists and poets than any other nation. Thomas Mann (d. 1957) was driven out of his country by the Nazis and became an American citizen; his *Buddenbrooks* (a German Forsyte Saga) and *The Magic Mountain* won him a Nobel Prize. He is likely to be regarded as one of the greatest novelists of our time. Hermann Hesse of Switzerland, although little known here, also won a Nobel Prize. Franz Kafka (d. 1924), a Jewish-Czech writer, wrote the powerful symbolist novels, *The Castle* and *The Trial*, which depict the life of man as solitary and surrounded by baleful influences in a nightmare form. His works have had a potent influence upon the modern generation, and notably upon the Existentialists. The great poets in the German language, who, influenced by the French symbolists, moved away from the simple lyric form, were Stefan George (d. 1933), a German; Hugo von Hofmannsthal (d. 1929), a Viennese Jew; and Rainer Maria Rilke (d. 1926), an Austrian. George, in addition to his original poems, translated Shakespeare's sonnets and, refusing Nazi honours, retired to Switzerland, where he died; his philosophy is expressed in his own words: "A poem is not the reproduction of a thought, but of a mood." Von Hofmannsthal, in addition to writing modern morality plays, composed the librettos of the operas of Richard Strauss. But the poetry of Rilke, particularly his *Sonnette an Orpheus* is among the most significant of the age. Among other works which, whatever their importance, have had some influence are Erich Remarque's war novel *All Quiet on the Western Front*, Arnold Zweig's *The Case of Sergeant Grischa*, the comic *Good Soldier Schweik* of the Czech Jaroslav Hasek (d. 1923), and the Proustian novels of the Austrian Robert Musil (d. 1942).

Spanish Literature. Spanish literature, almost since the time of Cervantes, has never been adequately recognised in Britain. The ordinarily educated individual, if asked the names of Spanish writers of this century, would probably be able to give only two: the novelist Vicente Blasco-Ibáñez (d. 1928) and the poet Federigo García Lorca (d. 1936). Blasco-Ibáñez is known for his novels *The Four Horsemen of the Apocalypse*, (made into a film), and *Blood and Sand*, which campaigned against bull-fighting. But few read these works now. García Lorca, however, is one of Spain's great poets, who nevertheless may owe some of his European reputation to the fact that he was brutally murdered by Franco sympathisers. Amongst his works are *Llanto por Ignacio Sanchez Mejías*, his unforgettable lament on the death of a bull-fighter, and his *Cancion de Jinete* with its haunting refrain, "Córdoba, far away and alone." Benito Pérez Galdós (d. 1920) is the Spanish Balzac who wrote a cycle of novels on contemporary life in Madrid. His *La de Bringas* ("The Spend-

thrifts ") has been translated into English. Other important Spanish writers are José Ortega y Gasset (b. 1883), who wrote one of the most important books of our time, *The Revolt of the Masses*; Miguel de Unamuno (d. 1936) poet and author of *Del Sentimiento Tragico de la Vida* (The Tragic Sense of Life); and Juan Jiménez (b. 1881), the symbolist poet. The most important living novelists of Spain are Arturo Barea, author of *The Forge, Struggle for the Spanish Soul, The Clash, The Broken Root*, and Ramon Sender, whose novels include *Seven Red Sundays, A Man's Place*, and *Dark Wedding*.

Italian Literature. In Italy, Gabriele d'Annunzio (d. 1938) was a romantic poet who considered himself a realist because, as a Fascist, he was obsessed with death, blood, and brutality. He was, in fact, a decadent. A much greater poet is Salvatore Quasimodo (b. 1901), whose humanism broke the spell of Fascist blood and thunder. He received the Nobel Prize for Literature in 1959. Of novelists we can only mention Ignazio Silone, the humanistic author of *Bread and Wine* and *The Seed beneath the Snow*; Alberto Moravia, the widely-read author of many short novels and stories (*The Conformist, The Fancy Dress Party, The Woman of Rome*), which deal with emotional and sexual problems in a highly imaginative and dramatic way; Riccardo Bacchelli, the greatest living Italian novelist, whose trilogy *The Mill on the Po* is reminiscent of Manzoni; and Carlo Levi (*Christ stopped at Eboli*). Giovanni Verga (d. 1922) is recognised as one of the great modern novelists of Europe. His Sicialian novel *Maestro-don Gesualdo* was translated, as we have seen, by D. H. Lawrence.

Russian Literature. Russian literature has, at any rate in Western eyes, suffered a sad decline since the Revolution, as have the rest of her arts. There has been no considerable Russian novelist since Gorky, unless we take into account the novel *Doctor Zhivago*, by Boris Pasternak (b. 1890), which leaves the "socialist realism" of Ilya Ehrenburg and Mikhail Sholokhov to return to the older tradition of Tolstoy and Dostoievsky basically concerned with moral rather than political problems. Pasternak is also one of Russia's great poets, but his writing was too much in the humanist European tradition for his countrymen, and latterly he took to translating Shakespeare's plays and Goethe's poems. As everyone knows, Pasternak was offered a Nobel Prize for his novel, but was compelled to refuse it by his government. Mayakovsky (d. 1930) was another poet of the early revolution which he supported, but, disillusioned, he took his own life, as did S. A. Yesenin (d. 1925). The romantic poetess Anna Akhmatova (b. 1888) has, with other writers who looked towards Europe, written nothing for many years; her husband was executed as a counter-revolutionary. Alexander Blok (d. 1921) also had faith in the revolution, and his famous poem *The Twelve* portrays Christ as leading the Bolsheviks; driven to despair, he drank himself to death. Two other authors, the Dostoyevskian Leonid Leonov (b. 1899), who wrote *Death of a Little Man*, and Mikhail Zoshchenko (b. 1895), the satirist, have been condemned to silence; Dostoyevsky is now regarded as a reactionary, and satire has little place in modern Russia, though Zoschenko's satirical short stories were very popular in Russia in the 1920's.

French Literature. France has been as prolific in the literary field as at any time in her past. The great poets of the 20th century are Paul Valéry (d. 1945), who was translated by Rilke; the specifically Catholic writers Charles Péguy (d. 1914, killed in the first world war) and Paul Claudel (d. 1955); Guillaume Apollinaire (d. 1918); and Jean Cocteau (b. 1889). Important novelists are Romain Rolland (d. 1944), whose *Jean Christophe* was based in the life of Beethoven; Marcel Proust (d. 1922), whose *A la Recherche du Temps Perdu* is one of the most important novels of the century; and Jules Romains (b. 1885), writer of *Men of Goodwill*. All these writers shared the French propensity for novels running into many volumes. André Gide (d. 1951), on the other hand, produced many short novels in which he unsuccessfully attempts to escape from his Protestant upbringing (*Strait is the Gate, The Coiners*). The Existentialist writers Jean-Paul Sartre (b. 1905), author of *La Nausée* and *Les Mouches*, Albert Camus (tragically killed in a motor accident in 1960), and André Malraux (b. 1895) are the most important writers of their generation. Camus, a Nobel Prizewinner, was the author of *The Plague*, a powerful allegorical novel of the Occupation. Malraux's great novel *La Condition humaine* was published in 1933 and won him the Goncourt prize. He has been side-tracked into politics and art-criticism and this has limited his scope as a writer of novels.

THE MODERN THEATRE.

Two writers who exercised a tremendous influence upon later dramatists were Anton Chekhov (d. 1904) and Henrik Ibsen (d. 1906). Chekhov, unlike Ibsen, never indulged in social criticism. His plays have no social message but are concerned with the relationships of small groups of people. Yet his characters are realistic, slightly ridiculous, and lovable, and express the dullness and frustration of Russian life in his day. Ibsen was a poet as well as a dramatist, and was nearly 50 when he began to write the series of realistic social dramas for which he is famous: *The Pillars of Society, A Doll's House, An Enemy of the People, The Wild Duck, Rosmersholm, The Lady from the Sea, Hedda Gabler, The Master Builder, John Gabriel Borkman*. Chekhov's plays include *The Three Sisters, The Cherry Orchard, The Seagull, Uncle Vanya*. Ibsen's disciple George Bernard Shaw (d. 1950), the brilliant Irish dramatist, brought new life and thought to the theatre, and by the use of great wit and irony made social criticism highly entertaining. His plays include *Back to Methuselah, Arms and the Man, Pygmalion, St. Joan, Caesar and Cleopatra, Heartbreak House*.

Johan Strindberg (d. 1912), a Swede, wrote *The Father* and *Miss Julie*, the former showing a wife deliberately driving her husband insane. Today it seems melodramatic, and his autobiography *Son of a Servant* reveals his tremendous personal conflicts in a manner reminiscent of Rousseau. The German Gerhart Hauptmann (d. 1946) was the author of plays of working-class life, such as *The Weavers*, for which he won a Nobel Prize in 1912, but they are seldom performed outside his own country. Another Nobel prizewinner (in 1934) was the Italian Luigi Pirandello (d. 1936), whose plays (*Enrico IV* is best known) are based on the psychological theme that individuals are not unified personalities but groups of varied personalities which change according to the situations they face. He was strongly influenced by the Sicilian novelist Giovanni Verga (d. 1922). Bertold Brecht (d. 1959), a German Communist dramatist who died in East Germany but who had also lived in the Soviet Union and the United States, wrote satirical plays directed against capitalism and war (*Die Dreigroschenoper*). Other important dramatists in Germany were Ernst Toller (d. 1939), Franz Werfel (d. 1945), who was also a novelist (*The Song of Bernadette*), and Carl Zuckmayer (*The Captain of Köpenick*).

Important names in the British theatre today are the verse-dramatists T. S. Eliot (*Sweeney Agonistes, Murder in the Cathedral, Family Reunion, The Cocktail Party*) and Christopher Fry (*A Phoenix Too Frequent, The Lady's Not For Burning, Venus Observed*), J. B. Priestley, who has experimented in various forms (*Time and the Conways, Johnson Over Jordan, Eden End*), the late James Bridie, another great and versatile dramatist, by some called the "Scottish Shaw," and, of course, Noel Coward and Somerset Maugham, both writers of glittering comedy.

In France the Existentialist dramatists Gabriel Marcel (b. 1889) and Jean-Paul Sartre (b. 1905) are important, the latter for his *Huis-Clos, La Putain respectueuse, Crime passionnel*. The Greek plays in modern dress of Jean Giraudoux (d. 1944) and the delicately ironical plays of Jean Anouilh (b. 1910) are among the most familiar French works performed in Britain.

Gazetteer of the World

Gazetteer of the World

This edition of the gazetteer has been revised from standard and authoritative sources. For the population figures the latest censuses have been used, where available, and where not available, the latest official estimates.

An endeavour has been made to include all the more important places throughout the world. The small scale of the maps included in the Cyclopaedia does not enable all places included in the gazetteer to be named on the maps.

In regard to the spelling of place names, the general principle followed has been to adopt national spellings. For those countries where the Latin Alphabet is not used, the principles for transliteration laid down by the "Permanent Committee on Geographical Names" of the Royal Geographical Society have been followed. There may be a few instances where the spelling shown on the map does not conform to that used in the gazetteer.

Albacete, *t.*, *cap.*, Albacete, Spain; on plains of Alta Mancha; agr. mkt., wheat, sheep; p. (1951) *71,822*.
Alba-Iulia, *t.*, Romania; on R. Mures, formerly Carlsburgh; union of Transylvania with Romania proclaimed here 1918; p. *15,216*.
Alban Hills, *volcanic group*, 10 m. S.E. of Rome, Italy; circumference 35 m.; greatest alt. Monte Faete, 3,137 ft.; viticulture.
Albania, *rep.*, S. Europe; lying along Adriatic, adjacent Jugoslavia and Greece; rugged mtnous. cty., fertile Adriatic littoral and Koritsa Basin; maize, wheat, olive oil, cheese, tobacco, wool, hides, horses, bitumen; cap. Tiranë; a. 10,629 sq. m.; p. (1955) *1,394,310*.
Albano Laziale, *t.*, Italy; S. of Rome; saline springs, mud baths; p. (1936) *9,414*.
Albany, *st.*, *cap.*, New York, U.S.A.; on R. Hudson; iron, brass, chemicals, textiles, paper; p. (1950) *134,995*.
Albany, *spt.*, *t.*, W. Australia; on King George Sound; agr. and pastoral; p. (1957) *8,906*.
Albay, *t.*, Luzon I., Philippines; hemp, sugar, copra.
Albemarle I., largest of the Galapagos in Pacific Ocean; alt. summit, 5,020 ft. above sea-level.
Albemarle Sound, *inlet*, N. Carolina cst. U.S.A. 60m.
Albert, *t.*, Somme, France; on R. Ancre; almost destroyed First World War and damaged again Second World War; aircraft, machin., hardware; p. (1954) *8,991*.
Albert L., Africa; great reservoir of White Nile, extreme length 100 m., general breadth 20 m., alt. 2,100 ft.; greater part in Uganda Protectorate.
Alberta, *prov.*, W. Canada; Rockies, in W.; pre-eminently agr.; wheat, other grains, alfalfa, dairying, livestock; coal, gas, and oil; cap.

Edmonton; a. 255,285 sq. m.; p. (1956) *1,123,116*.

Albertville, *t.*, Belgian Congo; on W. shore of L. Tanganyika; rly. to Kongola on L. Lualaba, trib. of R. Congo.

Albi, *cap.*, Tarn, France; cath.; industl. and comm. ctr. in coal mining district; p. (1954) *34,693*.

Albigeois, *sub-region*, Basin of Aquitaine, France; centred on Albi; rich farming, cereals and vines; sm. coalfield and associated industries.

Albion, *t.*, Mich., U.S.A.; mnfs. iron goods; p. (1950) *10,406*.

Albunol, *t.*, S. Spain; 40 m. S.E. of Granada.

Albuquerque, *t.*, Spain; 25 m. N. of Badajoz.

Albuquerque, *t.*, N. Mex., U.S.A.; on Rio Grande; wool, hides, timber, metals, cement; univ.; p. (1940) *35,449*.

Albury, *t.*, N.S.W., Australia; on Murray R.; sheep farming, currants; p. (1958) *18,400*.

Alcalá de Henares, *t.*, Spain; 20 m. E. of Madrid; birthplace of Cervantes; p. *13,001*.

Alcalá la Real, *t.*, Andalusia, Spain; p. *21,377*.

Alcamo, *t.*, Sicily, Italy; 24 m. S.W. of Palermo; olives, oranges, lemons, wines; Saracen cas.; p. *51,200*.

Alcantara, *fortfd. t.*, W. Spain; on Tagus R.

Alcázar de San Juan, *t.*, nr. Ciudad Real, Spain; soap, gunpowder, wine.

Alcázar Quivir (Al Kazral Kebir), *c.*, Morocco, N. Africa; 80 m. N.W. of Fez; p. (1945) *35,786*.

Alcester, *t.*, Warwick, Eng., needles and fish-hooks; agr. and mkt. gardening; p. *13,110*.

Alcoy, *t.*, Spain; 25 m. N. of Alicante; farm implements, textiles, mach., electrical engin.

Alcudia, *Roman walled t.*, Majorca I., Spain; 31 m. from Palma; site of Roman t. of Pollentia.

Aldan, *navigable R.*, Siberia, U.S.S.R.; length 300 m.

Aldeburgh, *mun. bor.*, *spt.*, E. Suffolk, Eng.; 30 m. from Ipswich; fisheries; headquarters of group of English writers and musicians; p. (1951) *2,684*.

Alderley Edge, *urb. dist.*, Cheshire, Eng.; p. (1951) *3,689*.

Aldermaston, Berkshire, Eng.; Atomic Weapons Research Establishment.

Alderney, most N. of the Channel Is.; agr. and hort. prods., dairying, meat-canning, silencers; t. St. Anne; sm. airpt.; a. 1,962 acres; p. (1956) *1,350*.

Aldershot, *mun. bor.*, Hants, Eng.; bricks; lge. military camp; p. (1951) *36,184*.

Aldridge, *urb. dist.*, Staffs, Eng.; plastics, packing-cases.

Aleksandrovsk, *spt.*, Sakhalin, U.S.S.R.; trading ctr. for coal and petroleum; p. *18,000*.

Alentejo Alto and Baixo, *provs.*, S. Portugal; caps. Evora and Beja; cereals, stock raising, copper, and iron; a. 9,219 sq. m.; p. (1940) *713,218*.

Alençon, *t.*, *cap.*, Orne, France; textiles, lace; p. (1954) *21,893*.

Aleppo, *c.*, ch. tr. centre N. Syria; grain, textiles, carpets, dairying; p. (estd. 1950) *362,541*.

Alès, *t.*, Gard, France; trades in raw silk produced in region; coal mining, chemicals, iron-ore, pyrite, zinc; p. (1954) *36,893*.

Alessandria, *c.*, N. Italy; cap. prov. of same name, 46 m. E. of Turin; linen, hats, macaroni; p. (1951) *82,178*.

Ålesund (Aalesund), *spt.*, W. coast Norway; fishing; p. *18,012*.

Aletsch, *glacier*, Bernese Alps, Valais can., Switzerland; lgst. in Europe; length exceeds 15 m.

Aletschhorn, *mtn.*, Bernese Alps, Valais canton, Switzerland; alt. 13,763 ft.

Aleutian Is. (U.S.A.), N. Pac. Oc., chain of Is. stretching out 1,200 m. from the most S.W. point of Alaska towards Kamchatka.

Alexander City, *t.*, Ala., U.S.A.; formerly Youngville; textiles; p. (1950) *6,430*.

Alexandretta, *spt.*, *see* **Iskenderun.**

Alexandria, *ch. port* Egypt, N.E. Africa; founded by Alexander the Great, 332 B.C.; floating dock; exp. cotton, wheat, rice, gum; p. (1947) *925,081*.

Alexandria, *t.*, Dunbartonshire, Scot.; on W. side of vale of Leven; has developed with increased communications; cotton printing, bleaching, dyeing, torpedo wks.

Alexandria, *t.*, Louisiana, U.S.A.; rice, foundries; p. (1950) *34,913*.

Alexandria, *c.*, *spt.*, N.E. Virginia, U.S.A.; on Chesapeake Bay; mnfs. foodstuffs, thread, cotton, leather goods; p. (1950) *61,738*.

Alexandrina L., inlet, S. Australia; nr. Encounter Bay.

Alexandroupolis, *spt.*, Thrace, Greece; oak timber tr., many antiquities; p. (1951) *18,453*.

Alford, *urb. dist.*, Lindsey, Lincoln, Eng.; agr. mkt., brewing, food-preserving; p. (1915) *2,218*.

Alfortville, *t.*, Seine, France; S.E. suburb of Paris. rubber, paper, glass, hosiery, metal wks.; p. (1954) *30,195*.

Alfreton, *urb. dist.*, Derby, Eng.; coal, iron, stone, chemicals, textile, engin. inds.; p. (1951) *23,388*.

Algarve, *prov.*, Portugal, cap. Faro; fruit, fishing, wines, salt; a. 2,028 sq. m.; p. (1940) *317,628*.

Algeciras, *spt.*, Spain; fishing, cork, oranges; winter health resort.

Algeria, N. African Gov. Gen. of France; comprises N. Algeria (divided into 12 deps.) and S. Territories or Sahara; fertile valleys, rugged mtns., barren plateaux; warm, moist winters, hot, dry summers; Berbers, Kabyles, Arabs, Tauregs; cap. Algiers; products: wine, fruit, olive oil, timber, tobacco, minerals; a. 851,077 sq. m.; p. (1954) *9,368,665*.

Alghero, *spt.* on western coast of Sardinia; cath.; coral fisheries, fruit, wine.

Algiers, *dep.*, Algeria, Fr. N. Africa; cap. Algiers; p. (1948) *2,765,898*.

Algiers, *cap.*, *naval port*, Algeria; strongly fortified; coaling sta.; exp. wheat, wine, olives; p. (1958) *360,000*; sub. *340,000*.

Algoa Bay, about 425 m. E. of C. of Good Hope, S. Africa.

Algonia, *t.*, E. Wis., U.S.A.; mnfs. dairy products, plywood; p. (1950) *3,384*.

Algonquin Park, Ontario, Canada; *park*, game reserve, tourist centre.

Alhama, *c.*, Granada, Spain; hot springs.

Alhaurin el Grande, *t.*, S. Spain; rly.; olive oil, marble quarries; p. *10,681*.

Alicante, *prov.*, S.E. Spain; ch. t. Alicante; a. 2,267 sq. m.; p. (1950) *634,065*.

Alicante, *spt.*, *t.*, E. Spain, noted for its wine, fruits, minerals; p. (1950) *104,099*.

Alice, *t.*, C. of Good Hope, Union of S. Africa; health resort.

Alice Springs, *t.*, N. Territory, Australia; between Adelaide and Darwin; ctr. vast pastoral holdings; p. (1957) *3,000*.

Aligarh, *t.*, India; univ.; wheat, cotton, gold and silver work; p. (1951) *141,618*.

Aliwal, *t.*, Cape Province, S. Africa; sulphur springs, health resort; p. *8,754*.

Alkmaar, *t.*, Netherlands; world cheese mkt.; salt; p. (1951) *40,054*.

Allahabad, *t.*, Uttar Pradesh, India; annual fair; Hindu pilgrimage ctr.; p. (1951) *332,295*.

Allegan, *t.*, Mich., U.S.A.; mkt. for dairy and fruit products of the district; mnfs. drugs; p. (1950) *4,801*.

Allegheny Mtns., U.S.A.; bold escarpment in the W. Section of the Appalachian system stretching from Pennsylvania to W. Virginia.

Allegheny, *R.*, U.S.A.; joins the Ohio R., Pittsburgh, Penns.; length 350 m.

Allen, Bog of, *peat morass*, Ireland; a. 372 sq. m.

Allen, Lough, *L.*, Ireland, length 5 m., breadth 3 m.; one source of R. Shannon.

Allenstein, *see* **Olsztyn.**

Allentown, *t.*, Penns., U.S.A.; on Lehigh R., furniture, silk, tobacco; lorries; p. (1950) *106,756*.

Aller, *t.*, N.W. Spain; agr. mkt.; coal-, iron-, lead-mines; p. *23,600*.

Allhallows-on-Sea, Kent, Eng., on the Thames estuary, opposite Southend; proposed "New Town" planned June 1956 by Dolphin Development and Management Co., Ltd., to house 25,000 people and light inds.

Alliance, *t.*, Ohio, U.S.A.; coal; p. (1950) *26,161*.

Allier, *dep.*, France; coal- and iron-mining, mineral springs, wine, wheat; a. 2,848 sq. m.; p. (1954) *372,689*.

Allier, *R.*, Central Massif, France; rises in Cevennes; trib. of R. Loire.

Alloa, *spt.*, *burgh*, Clackmannan, Scot.; on N. bank of R. Forth 5 m. E. of Stirling; engin., brass, bricks, tiles, woollens, glass, distilling; p. (1951) *13,436*.

Almelo, *t.*, Overyssel, Netherlands; 25 m. S.E. of Zwolle; cotton textile mnfs.; p. (1951) *42,369*.
Almendralejo, *t.*, Badajoz, Spain.; wine, brandy.
Almeria, *prov.*, S. Spain; ch. t. Almeria; a. 3,338 sq. m.; p. (1950) *357,401*.
Almeria, *spt.*, *t.*, S.E. Spain; cath.; exp. grapes, esparto grass, lead; p. (1950) *76,497*.
Almondbury, *t.*, W.R. Yorks, Eng.; joined to Huddersfield.
Almunecar, *spt.*, Spain, on Mediterranean.
Aln, *R.*, Northumberland, Eng.
Alnwick, *urb. dist.*, Northumberland, Eng.; cas.; brewing, agr. machin.; p. (1951) *7,366*.
Alor, *I.*, one of Lesser Sunda Is., Indonesia.
Alor Star, *t.*, *cap.*, Kedah st., Fed. of Malaya; on main road and rly., N Airport; p. *32,424*.
Alora, *t.*, Spain, 25 m. N.W. of Malaga; oranges, lemons; p. (1940) *5,614*.
Alost (Aalst), *t.*, Belgium; 14 m. N.W. of Brussels; rly.-junc.; weaving (linen, silk), brewing; p. (estd 1957) *44,179*.
Alpena, *c.*, Thunder Bay, Mich., U.S.A.; cement, paper, tanneries, sawmills; p. (1950) *13,135*.
Alpen on Rhine, *t.*, Netherlands; on Old Rhine, 10 m. S.E. of Leyden; mkt. for dairy produce; p. (1946) *20,715*.
Alpes-Maritimes, *dep.*, S.E. France; ceded by Italy in 1860; ch. t. Nice; olives, wines, fruit; a. 1,443 sq. m.; p. (1954) *515,484*.
Alps, highest mtns. in Europe; 600 m. long from G. of Genoa to near Vienna; 130 m. broad in Tyrol; principal peaks: Mont Blanc (15,784 ft.), Mont Rosa (15,217 ft.), Matterhorn (14,782 ft.).
Alps, Apuan, limestone range near Viareggio, Italy; source of Carrara marble.
Alps, Australian, mtn. range between E. Victoria and N.S.W.; highest peak, Mt. Kosciusko, 7,328 ft.
Alps, Southern, mtn. ridge between Westland and Canterbury, New Zealand, highest peak Mt. Cook 12,349 ft.
Als, *I.*, Denmark, in the Little Belt, a. 130 sq. m.
Alsace-Lorraine, *prov.*, France; industl., agr., wooded, minerals; total a. 5,601 sq. m. Taken from France, in 1871, retroceded 1919; now divided into deps. of Bas-Rhin (1,848 sq. m. and p. (1954) *707,934*); Haut-Rhin (1,354 sq. m. and p. (1954) *509,647*); Moselle (2,403 sq. m. and p. (1954) *769,388*).
Alsager, *urb. dist.*, *mkt. t.*, Cheshire, Eng.; motor vehicles; p. (1951) *5,574*.
Alsdorf, *t.*, N. Rhine-Westphalia, Germany; 10 m. N.E. of Aachen; tar-distillation plant; p. (estd. 1954) *22,800*.
Alston, *t.*, Cumberland, Eng., on S. Tyne R. in N. Pennines; limestone quarrying, hosiery; p. *3,344*.
Altai, *mtns.*, S. boundary of Siberia; extend from sources of Obi to Gobi Desert more than 2,500 m. Bieluka Peak, alt. 12,796 ft.
Altamaha, *R.*, Georgia, U.S.A.; flowing into Atlantic; length 150 m.
Altamira, *caves*, N. Spain; prehistoric shelters, paintings of animals (Magdalenian).
Altamura, *t.*, Apulia, Italy; at foot of the Apennines; wines, wool.
Altdorf, *t.*, *cap.* Uri can., Switzerland; on R. Reuss; rubber goods, wood workings; p. *5692*.
Altea, *spt.*, Spain; on Mediterranean.
Altena, *t.*, N. Rhine-Westphalia, Germany; site of ancient cas. of Counts von der Marck; metals, wine; p. (estd. 1954) *22,600*.
Altenburg, *t.*, Thuringia, Germany; lignite mining, engin., metallurgy, mnfs. playing cards, textiles; p. (estd. 1954) *51,800*.
Alton, *urb. dist.*, Hants, Eng.; breweries, light engin.; p. (1951) *8,636*.
Alton, *t.*, Illinois, U.S.A.; machinery, glass, chemicals, flour; p. (1950) *32,550*.
Altona, *t.*, part of Hamburg, Germany; iron, textiles, breweries, glasswks., soap, leather, tobacco, fish canning; p. (estd. 1954) *250,000*.
Altoona, *c.*, Blair, Penns., U.S.A.; coal, rly. wks.; p. (1950) *71,177*.
Altrincham, *mun. bor.*, Cheshire, Eng.; heavy engin.; p. (1951) *39,787*.
Altus, *t.*, Okla., U.S.A.; cotton, livestock, grain mkt.; p. (1950) *9,735*.
Altyn Tagh, part of Kunlun mtns., Tibet, 14,000 ft.
Alva, *burgh*, Clackmannan, Scot.; at S. foot of Ochil Hills, 3 m. N. of Alloa; woollens, printing, fruit and fish canning; p. (1951) *4,107*.
Alvah, *par.*, Banff, Scot.; near the hill of Alva; p. (1951) *892*.
Alvin, *t.*, Texas, U.S.A.; grain mkt., oil wells; p. (1950) *3,701*.
Älvsborg, *co.*, Sweden; a. 4,919 sq. m.; p. (1950) *359,005*.
Alyth, *mftg. burgh*, Perth., Scot.; in Strathmore 17 m. N.E. of Perth; p. (1951) *2,072*.
Amadeus, *large salt L.*, N. Terr., Australia; 92 m. long.
Amadjuak Lake, Baffin I., Canada.
Amagasaki, *t.*, Japan; sub. of Osaka; chemicals, iron and steel; p. (1950) *279,264*.
Amakusa Bay, *inlet*, Kyushu, Japan; on W. cst., E. of Nagasaki.
Amakusa, *I.*, Japan; kaolin.
Amalfi, *spt.*, Italy; on G. of Salerno; tourist resort; fisheries. p. *12,365*.
Amalias, *t.*, W. Greece; grapes, wine, currants;
Amapa, *Fed. terr.*, Brazil; a. 53,059 sq. m.; cap. Macapá; manganese ore; p. (1950) *37,477*.
Amara, *t.*, R. *pt.*, Iraq; on left bank of R. Tigris 250 m. below Baghdad; Arab t. and agr. mkt. at R. crossing; p. *18,000*.
Amarillo, *t.*, Texas, U.S.A.; oil refining, creameries; p. (1950) *74,246*.
Amasya, *t.*, Turkey; on Yeshil-Irmak; fruit, salt, silk, wine.
Amazon, *R.*, S. America; largest basin and extent of water of any river in the world; rises among the Andes as the Alto Marañon, and flows 4,000 m. to the Atlantic. Ocean steamers penetrate to Iquitos, 1,935 m. from mouth. One of its affluents, the Madeira, has an extreme length of *c.* 2,000 m. Drains nearly 3 million sq. m.
Amazonas, *st.*, Brazil; rubber, timber; a. 616,148 sq. m.; cap. Manaus (*q.v.*); p. (1950) *530,920*.
Amazonas, *dep.*, Peru; a. 13,943 sq. m.; cap. Chachapoyas; p. (1947) *99,060*.
Ambala, *t.*, E. Punjab, India; cotton, flour.
Ambarchik, *spt.*, Yakut rep., U.S.S.R.; air base, gold-mining; p. *10,000*.
Ambato, *c.*, Ecuador, S. America; S. of Quito, on slope of Mt. Chimborazo; alt. 8,859 ft.; p. (1950) *33,908*.
Amberg, *t.*, Bavaria, Germany; on R. Vils; iron, mining, engin., textiles; p. (estd. 1954) *40,100*.
Ambert, *t.*, Puy-de-Dôme, France; paper, cheese.
Amble, *urb. dist.*, Northumberland, Eng.; exp. coal; p. (1951) *4,677*.
Amblecote, *urb. dist.*, Staffs., Eng.; glass, fireclay, iron wks.; p. (1951) *3,165*.
Ambleside, *sm. mkt. t.*, Westmorland, Eng.; in heart of Lake Dist., nr. L. Windermere; tourist centre, slates.
Amboina, *I.*, Moluccas, Indonesia; a. 75,820 sq. m.; spices; p. (1930) *400,642*.
Amboina, *t.*, *cap.*, *residency*, Molucca Is., Indonesia; pt. on S. cst. of Amboina I.; shipyards; p. (estd.) *17,334*.
Amboise, *t.*, Indre-et-Loire, France; 15 m. E. of Tours; famous cas. and prison; p. (estd.) *4,500*.
Ambriz, *spt.*, Angola; sugar-cane, coffee, copper.
Ameland, *I.*, W. Frisian Is., Netherlands; off cst. of Friesland.
America, *continent*; a. 16¾ million sq. m., p. *215,000,000*. The two vast divs. of this continent are joined by the narrow Isthmus of Panama. The most N. point is over 9,000 m. distant from C. Horn, the extreme S. point. *See also* N. and S. America.
Amersfoort, *t.*, Netherlands; on R. Eem; textiles, leather, tobacco; p. (1951) *59,277*.

Asheboro, *t.*, N.C., U.S.A.; chemicals, lumber, furniture, hosiery; p. (1950) *7,701*.
Asheville, *t.*, *winter health resort*, N. Carolina, U.S.A.; leather, textiles, furniture; p. (1950) *53,000*.
Ashford, *urb. dist.*, *mkt. t.*, Kent, Eng.; rly. wks., agr. implements, ironfounding; p. (1951) *24,777*.
Ashikaga, *t.*, Japan; weaving, cultural ctr.; p. (1947) *48,310*.
Ashington, *urb. dist.*, Northumberland, Eng.; coal; p. (1951) *28,723*.
Ashio, *t.*, Japan; 65 m. N. of Tokyo; copper; commerce; p. (1947) *20,997*.
Ashkhabad, *cap.*, Turkmenistan, S.S.R.; textiles, engin., films; p. (1959) *170,000*.
Ashland, *t.*, Kentucky, U.S.A.; on R. Ohio; iron, steel, lumber, leather; p. (1950) *31,131*.
Ashland, *t.*, Penns., U.S.A.; coal-mining, knitwear, mine pumps; p. (1950) *6,192*.
Ashland, *t.*, Wisconsin, U.S.A.; iron, steel; p. (1950) *10,640*.
Ashtabula, *t.*, Ohio, U.S.A.; near L. Erie; farm implements, leather; p. (1950) *23,696*.
Ashton-in-Makerfield, *urb. dist.*, Lancs., Eng.; near Wigan; coal; p. (1951) *19,053*.
Ashton-under-Lyne, *mun. bor.*, *mftg. t.*, Lancs., Eng.; nr. Manchester; iron and steel, coal-mining, textiles, light engin.; p. (1951) *46,490*.
Ashuapmuchuan, *L.*, Quebec, Canada.
Asia, *largest continent*, extends over nearly one-third of the land surface of the earth. Chief mtn. ranges: Himalayas, Kunlun, Tien Shan, Altai; Tibetan plateau; chief Rs.: Ob, Yang-tze-Kiang, Yenisei, Lena, Amur, Hwang-ho; deserts: Arabia, Thar, Takla Makan, Gobi; some very fertile valleys and plains. Climate very varied, extreme in N., monsoonal in S. and E. Gold, coal, oil, iron, manganese, antimony, tin. Principal countries in Asia: Turkey, Arabia, Israel, Jordan, Persia, Afghanistan, India, Pakistan, Burma, China, Viet-Nam and associated states, Siam, Korea, Japan and Asiatic U.S.S.R. Races: Indo-Aryan, Mongolian, Dravidian, Malayan; a. 17,600,000 sq. m. (one-third of land a. of world); p. (approximately) *1,155* millions.
Asiago, *t.*, Vicenza, Italy; straw hats; site of Austro-Italian battle, 1916; p. *2,861*.
Asia Minor (Anatolia), W. portion of Asia, part of Asiatic Turkey; chief c. Izmir, important spt. of Levant.
Asinara, *I.*, Mediterranean Sea; off N.W. coast Sardinia; 11 m. long; the ancient I. of Hercules.
Asir, part of Saudi Arabia, S. Arabia; cst. region between Yemen and Hejaz.
Askeaton, *t.*, on estuary of R. Shannon, Limerick, Ireland.
Asmara, *cap.* former Italian colony of Eritrea, N.E. Africa; on rly. which connects Massawa and Agordat; p. (1948) *131,000*.
Asnières, *t.*, Seine, France; dyes, perfumery, regattas; p. (1954) *77,838*.
Asolo, *t.*, N.E. Italy; Roman remains.
Aspatria, *t.*, Cumberland, Eng.; dairying, etc.; p. (estd.) *3,000*.
Aspropotamos, *R.*, Greece; longest R. in the country; length 115 m.
Aspull, *urb. dist.*, Lancs. Eng.; near Wigan; coal, cotton; p. (1951) *6,522*.
Assam, *st.*, India; Brahmaputra R. flows through it; extensive tea plantations; rice, cotton, coal; cap. Shilong; a. 85,012 sq. m.; p. (estd. 1957) *9,043,707*.
Assen, *t.*, cap. Drenthe, Netherlands; p. (1951) *24,079*.
Assens, *t.*, *I.* of Fyne, Denmark, on the Little Belt, p. *4,826*.
Assiniboine, *R.*, Manitoba, Canada; joins Red R. at Winnipeg; length 1,500 m.
Assisi, *t.*, Umbria, Central Italy; 15 m. S.E. of Perugia; birthplace of St. Francis; fine cath. and old cas; p. *5,353*.
Assynt, *dist.*, *L.*, Sutherland, Scot., 7 m.; agr. and creameries; p. (estd. 1950) *1,050*.
Assyria, *heart of former empire*, N. plain of Mesopotamia, Iraq; drained by R. Tigris; now mainly pastoral farming a.; ruins of many ancient cas.; cap. Nineveh.
Astara, *spt.* on the Caspian, at Persian N.W. frontier; important trading ctr.
Asterabad, *t.*, N. Iran (Persia); on S.E. shore of Caspian Sea; p. *28,000*.
Asti, *t.*, Alessandria, Italy; fine cath.; wines; silk, motor cycles; p. (1951) *52,733*.
Astipalaia, *I.*, Grecian Archipelago.
Astorga, *t.*, Spain, nr. Leon; cath.; p. *14,523*.
Astoria, *t.*, Oregon, U.S.A.; salmon-canning; p. (1950) *12,331*.
Astoria, N.Y., U.S.A.; industl. and residtl.; part of Queen's *bor.*, New York City; p. *10,349*.
Astrakhan, *t.*, R.S.F.S.R.; on delta of R. Volga; univ.; fish, caviare, astrakhan wool, fruits, wheat, elec. power, engin.; p. (1959) *294,000*.
Astrida, *t.*, Ruanda-Urundi terr., E. Belgian Congo.
Astrolabe Bay, on N.E. coast of New Guinea; arm of the Pacific Ocean.

Asturias, *old prov.*, N. Spain; now Oviedo, on Bay of Biscay.
Asunción, *cap.*, Paraguay; on junction of Rs. Paraguay and Pilcomayo; cath.; tobacco, sugar, leather; p. (1950) *205,605*.
Aswan, *administrative div.*, Upper Egypt, N.E. Africa; a. 337 sq. m.; p. (1947) *286,854*.
Aswan, *t.* Upper Egypt; on Nile at 1st cataract, ancient name Syene; near famous ruins, temples, catacombs; tourist centre; p. (1947) *25,397*.
Aswan Dam, Aswan, Upper Egypt; built 1902 to control Nile flood in Egypt, subsequently heightened; rly. extended to Shellal, 2 m. above dam.
Asyut (**Assiut**), *prov.*, Upper Egypt; cap. Asyut; a. 787 sq. m.; p. (1947) *1,378,904*.
Asyut, *t.*, Upper Egypt, N E. Africa; pottery, ivory work; p. (1947) *90,378*.
Atacama, *prov.*, N. Chile; cap. Copiapo; rich in minerals, nitrates, borax, guano; a. 30,834 sq. m.; p. (1957) *96,152*.
Atacama Desert, Chile; arid coastal tract, rich in nitrates.
Atami, *t.*, Japan; wat. pl. on Sagami Sea; p. *14,477*.
Atar, *t.*, Mauritania, W. Africa; rly. terminus, chief inland town; p. (1954) *4,200*.
Atbara, *t.*, Sudan; at confluence of Atbara R. with Nile; rly. wkshps.; p. (estd. 1951) *36,100*.
Atbara R., or **Black Nile**, Ethiopia and Sudan; trib. of Nile; length 790 m.
Ath, *t.*, Hainaut, Belgium; sugar refining, furniture, chemicals, silk; p. (1948) *10,284*.
Athabaska, *R.*, Alberta, Saskatchewan, Canada; navigable by steamers, save at Grand Rapids, near mouth of Clearwater R.; length 740 m.
Athabaska, *L.*, Alberta, Saskatchewan, Canada; a. 3,085 sq. m.
Athelney, hill formerly encircled by marsh near Taunton, Somerset, Eng.; between the Rs. Tone and Parret; King Alfred's hiding-place.

Bear L., on border of Idaho and Utah, U.S.A.
Bear L., Great, N.W. Terr., Canada; outlet to Mackenzie R. through Great Bear R.; a. 14,000 sq. m.
Béarn, *old prov.* now Basses-Pyrénées, France.
Beas (Bias), *R.*, Punjab, Pakistan; trib. of Sutlej R.; one of the "five rivers."
Beas de Segura, *t.*, Spain; wine, oil, fruits, flax; p. *14,953*.
Beatrice, Neb., U.S.A.; health resort on Big Blue R.; p. (1950) *11,813*.
Beattock, *pass*, S. Uplands, Scot.; gives access from valley of R. Clyde to R. Annan; used by main W. cst. rly. route from Carlisle to Glasgow and Edinburgh; alt. 1,014 ft.
Beaucaire, *t.*, Gard, France; noted fair; p. (1954) *10,197*.
Beauce, *natural division* ("*pays*"), Central France; low, level, plateau of limestone S.W.

of Paris and R. Seine; arid, few surface streams; thin layer of loam (limon) permits agr.; impt. wheat-growing area; population mainly grouped in lge. vils.

Beaufort, *t.*, S.C., U.S.A.; tourists, mkt. gardens, canneries, shrimps, oysters, phosphates; p. (1950) *5,081*.

Beaufort West, *t.*, C. of Good Hope, S. Africa; sheep, karakul; p. (1946) *10,908*.

Beauharnois, *t.*, Quebec, Canada; p. *3,550*.

Beaujolais, France; wine-growing dist.

Beaulieu, *par.*, Hants, Eng.; on Beaulieu R.; yachting; p. *1,201*.

Beauly, *R.*, Inverness, Scot.; flows to Beauly Loch.

Beauly, *t.*, Inverness, Scot.; on Beauly R.; p. *890*.

Beaumaris, *mun. bor.*, *wat. pl.*, cap. Anglesey, N. Wales; on Menai Strait; cas., ruins; light engin.; p. (1951) *2,128*.

Beaumont, *c.*, E. Texas, U.S.A.; lumbering, petroleum; p. (1950) *94,014*.

Beaune, *t.*, Côte d'Or, France; wines, casks, farm implements; p. (1954) *13,175*.

Beausoleil, *t.*, Alpes-Maritime, France; p. (1954) *11,504*.

Beauvais, *t.*, *cap.*, Oise, France; cath.; Gobelin tapestry; p. (1954) *26,756*

Beaver, *R.*, Penns., Ohio, U.S.A.; rises in Allegheny Plateau, flows N. towards L. Erie, turns S.E. into R. Ohio just below Pittsburgh; valley provides easiest route from Pittsburgh to L. Erie pts., contains many steel-mkg. ts., Youngstown, Newcastle, Warren; length 130 m.

Beaver Dam, *c.*, Wisconsin, U.S.A.; summer resort on L.; p. (1950) *11,867*.

Beaver Falls, *t.*, Penns., U.S.A.; machin., pottery, coal, natural gas; p. (1950) *17,375*.

Beaver Meadows, *bor.*, E. Penns., U.S.A.; anthracite, textiles; p. (1950) *1,723*.

Beawar, *t.*, India; cotton; p. *36,700*.

Bebington, *mun. bor.*, Cheshire, Eng.; soap, chemicals, engin.; p. (1951) *47,742*.

Bebra, *t.*, Hessen, Germany; on R. Fulda; textiles; p. (1946) *6,922*.

Beccles, *mun. bor.*, Suffolk, Eng.; printing, engin., malting; p. (1951) *6,869*.

Bechuanaland, *Brit. protectorate*, S.W. Africa; stretches from Orange R. to Zambesi R., and merges westward into the Kalahari desert; comprises various tribes of which the ch. is the Bamangwato; cap. Serowe; cattle-rearing. Admin. ctr., Mafeking; a. approx. 275,000 sq. m.; p. (1956) *327,335*, inc. Mafeking.

Beckenham, *mun. bor.*, Kent, Eng.; residtl. sub. of London; p. (1951) *74,834*.

Beckley, *c.*, S.W. Va., U.S.A.; coal; p. (1950) *19,397*.

Beckum, *t.*, N. Rhine-Westphalia, Germany; cement, chalk, engin. wks.; p. (estd. 1950) *17,800*.

Bedale, *mkt. t.*, N.R. Yorks, Eng.; at N. end of Vale of York; p. *1,043*.

Beddgelert, *par.*, Caernarvon, Wales; resort; slate.

Beddington and Wallington, *mun. bor.*, Surrey, Eng. nr. Croydon; p. (1951) *32,751*.

Bedford, *mun. bor.*, Beds, Eng.; on R. Ouse, 50 m. N. of London; general engin. inc. marine and elect., bricks, ironfounding, aero research; p. (1951) *53,065*.

Bedfordshire, S. Midland *co.*, Eng.; co. t. Bedford (*q.v.*); agr., mkt. gardening, brickmkg., cement, vehicles, engin.; a. 473 sq. m.; p. (1951) *311,844*.

Bedford, *t.*, Indiana, U.S.A.; p. (1950) *12,562*.

Bedford, *t.*, Ohio, U.S.A.; p. (1950) *9,105*.

Bedford Level, once over 400,000 acres of peat marsh in S. Fenland; first successful draining initiated by Earl of Bedford in 1634.

Bedlington, *urb. dist.*, Northumberland, Eng.; iron, coal; p. (1951) *28,836*.

Bedloe's I., or **Liberty I.**, N.Y. harbour, U.S.A.; on which statue of Liberty stands.

Bedminster, *t.*, Somerset, Eng.; sub. of Bristol.

Bedourie, *t.*, Queensland, Australia.

Bedrashem, *t.*, Egypt, N.E. Africa; on R. Nile.

Bedwas and Machen, *urb. dist.*, Mon., Eng.; gas, coal and coke by-prods.; p. (1951) *8,712*.

Bedwellty, *urb. dist.*, Mon., Eng.; coal, iron, elec. goods, car upholstery; p. (1951) *28,826*.

Bedworth, *urb. dist.*, Warwick., Eng.; coal-mng., limestone quarrying, engin., textiles; p. (1951) *24,866*.

Bedzin, *commune*, S. Poland; coal, zinc, metals, chemicals, bricks, sugar-beet; p. (1946) *27,754*.

Beechworth, *t.*, Victoria, Australia; gold, pastoral and agr.

Beechy Point, *C.*, N.E. cst. Alaska, N. America.

Beemaning Mtn., highest peak Blue Mtns, N.S.W., Australia; alt. 4,100 ft.

Beenleigh, *t.*, Queensland, Australia; 24 m. S. Brisbane.

Beerberg, *highest mtn.*, Thüringer Wald, Germany; alt. 3,266 ft.

Beernem, *t.*, W. Flanders, Belgium.

Beersheba, *t.*, Israel; ctr. for development of the Negev; p. (1953) over *20,000*.

Beeskow, *t.*, Germany; on R. Spree.

Beeston and Stapleford, *urb. dist.*, Nottingham, Eng.; engin., drugs, telephones; p. (1951) *49,849*.

Beeville, *c.*, Texas, U.S.A.; mnfs. oilfield equipment; oil-wells; p. (1950) *9,348*.

Beg, *L.*, Antrim, N. Ireland.

Bega, *R.*, S. Hungary; canalised trib. to R. Tisza.

Bègles, *t.*, Gironde, France; mftg.; p. (1954) *23,176*.

Beheira, *prov.*, Lower Egypt, N.E. Africa; in delta of Nile R.; cotton; a. 1,639 sq. m.; p. (1947) *1,245,943*.

Behistun, *t.*, Iraq; in ruins; monuments of Darius the Great.

Beilan, *t.*, *mtn. pass*, Syria-S.W. Asia; E. of G. of Iskenderun; ancient Amanus of "Syrian Gates."

Beilngries, *t.*, Bavaria, Germany; on Ludwig's canal.

Beilstein, *t.*, Germany; on R. Moselle.

Beira, *spt.*, *cap.*, prov. Manica and Sofala, Mozambique; airport; rly. runs inland to Salisbury (N. Rhodesia) and Blantyre (Nyasaland); exp. sugar, maize, cotton; p. (1950) *42,549*.

Beira Alta, *prov.*, Portugal; a. 3,682 sq. m.; p. (1940) *662,616*.

Beira Baixa, *prov.*, Portugal; a. 2,897 sq. m.; p. (1940) *334,788*.

Beira Litoral, *prov.*, Portugal; a. 2,908 sq. m.; p. (1940) *896,719*.

Beirut, *cap.* Lebanon, S.W. Asia; most impt. *spt.* Syria and Lebanon; ancient historic t., now busy shipping and mercantile ctr.; silk, wool, fruits; p. (estd. 1950) *247,000*.

Beitbridge, *t.*, S. Rhodesia; on Limpopo R.

Beit el Faki, *t.*, Yemen, Arabia; coffee.

Beith, *par.*, N. Ayr, Scot.; industl.; p. (1951) *6,908*.

Beit Jala, *t.*, Jordan, S.W. Asia; p. (estd. 1946) *3,740*.

Beit Jibrin, *t.*, Israel, S.W. Asia; in Judæan Hills, 20 m. W.S.W. Jerusalem; p. *1,000*.

Beja, *dist.*, Portugal; pig-breeding dist.; olive oil, pottery; cath.; p. (1950) *288,411*.

Bejar, *t.*, Spain; cloth; p. *12,875*.

Bekes, *t.*, Hungary; wheat; p. *29,283*.

Békéscsaba, *t.*, Hungary; milling; rly. junction; p. *52,404*.

Bela, *t.*, Baluchistan, Pakistan; p. *4,000*.

Bela Crkva, *t.*, Jugoslavia; p. *9,373*.

Belalcazar, *t.*, Spain; woollen mnfs.; p. *9,471*.

Belaya Tserkov, *t.*, N. Ukrainian S.S.R.; agr. and comm. ctr.; p. (1959) *71,000*.

Belbeis, *t.*, Egypt, N.E. Africa; agr. ctr. on W. edge of cultivated Nile delta.

Belcher Is., two sm. groups in Hudson Bay, N.W Terr., Canada.

Belding, *c.*, Mich., U.S.A.; silk mills; p. (1950) *4,436*.

Belem, *sub.* of Lisbon, Portugal; fine church, monastery.

Belém, *cap.*, Pará st., Brazil; cath., bishop's palace; arsenal, museum; coaling sta., rubber, rice, sugar; p. (1950) *260,608*.

Belen, *t.*, Catamarca, Argentina.

Bélep Arch., about 7 m. N.E. of New Caledonia.

Belfast, *spt.*, *co. bor.*, *cap.* N. Ireland; Antrim (and partly Down), at head of Belfast Lough; linen mnf., rope, tobacco, shipbldg., distilling, aircraft, patent glazing; univ.; Houses of Parliament, Stormont Cas.; p. (1951) *443,670*.

Belfast, *t.*, Maine, U.S.A.; p. (1950) *5,960*.

Belfodio, *t.*, Ethiopia; nr. border with Sudan; p. *1,000*.

Belford, *rural dist.*, Northumberland, Eng.; agr., whinstone quarrying; p. (1951) *51,580*.

Belfort, *t.*, Belfort, France; between Jura and

the Vosges; strongly fortified; cotton, brewing machin.; p. (1954) *43,434*.
Belfort, *dep.*, France; ch. t., Belfort; a. 235 sq. m.; p. (1954) *99,427*. [*85,988*
Belgaum, *t.*, Bombay, India; cotton; p. (1951)
Belgian Congo, Central Africa; basin of Congo; climate, uniformly hot, heavy rains, tropical forests; races: Bantu origin; agr., palm oil, cotton, rice, copal, coffee, ivory, rubber; minerals: copper, gold, diamonds, tin, uranium; communications: mainly river, some rail; cap. Leopoldville; ch. ts.: Boma, Stanleyville, Elisabethville; a. (estd.) 904,757 sq. m.; p. (1956) *12,843,574* (Bantu origin), *107,413* (white).
Belgium, *cty.*, W. Europe; climate temperate; ch. rivers: Scheldt, Meuse; races: Flemish, Walloon; languages: Flemish, French; religion: Roman Catholic; ch. inds.: agr., cereals, sugar-beet, potatoes, cattle, pigs, horses; minerals: coal; mnfs.: iron and steel machin., engin., metals, shipbldg., textiles, brewing, distilling; exp. mnf. goods; communications: rail, road, canal; cap. Brussels; ch. port, Antwerp; univ. at Brussels, Ghent, Liége, Louvain; a. 11,755 sq. m.; p. (1957) *9,026,778*.
Belgorod, *t.*, Kursk, R.S.F.S.R.; chalk, lumber, soap, leather, engin.; p. (1959) *71,000*.
Belgorod, Dnestrovski, *t.*, Ukraine, U.S.S.R.; mouth of Dniester R.; wine, wool, fruit.
Belgrade (**Beograd**), *c. cap.*, Serbia, Jugoslavia; at junc. of Save and Danube; univ.; mnfs. tobacco, woollens, aircraft; p. (estd. 1958) *520,000*.
Belhaven, *t.*, N.C., U.S.A.; on Pamlico Sound; fishing, lumbering; p. (1950) *2,528*.
Belitong or **Billiton**, *I.* Between Sumatra and Borneo, Indonesia; a. 1,866 sq. m.; p. (1930) *73,429*.
Belize, *t.*, *cap.*, British Honduras, Central America; mahogany, dyewoods, bananas; p. (1946) *21,886*.
Bell, *I.*, Newfoundland, E. Canada; in Conception Bay, 20 m. N.W. of St. Johns; impt. Wabana iron-ore deposits outcrop on N.W. cst., smelted on Pictou coalfield, Nova Scotia; a. 12 sq. m.; p. of Wabana (1956) *7,873*.
Bell, *R.*, Quebec, Canada; flows N. into James Bay.
Bell, *t.*, Cal., U.S.A.; residtl. c. 5 m. S. of Los Angeles; p. (1950) *15,430*.
Bell Rock, Scot.; famous rock and lighthouse 12 m. S.E. of Arbroath.
Bellagio, *t.*, Italy; on L. Como; resort.
Bellaire, *mftg. t.*, Ohio, U.S.A.; p. (1950) *12,573*.
Bellary, *fortfd. c.*, Madras, India; cotton; p. *56,148*.
Belleek, *par.* and *vil.*, Fermanagh, N. Ireland; on Erne R.; china; p. *1,300*.
Bellefontaine, *t.*, Ohio, U.S.A.; agr. ctr., light mnfs.; holiday resort; p. (1950) *10,232*.
Bellefonte, *bor.*, Penns., U.S.A.; limestone quarries; p. (1950) *5,651*.

Egypt, *republic*, N.E. Africa; united with Syria Feb. 1958 to form United Arab Republic which federated with Yemen March 1958 to form United Arab States; desert, except fertile Nile valley; agr. depends on annual rise of the Nile waters and irrigation; climate: hot, dry summers, warm winters with little rain; agr.: wheat, barley, rice, onions, cotton; phosphates; communications: Nile rly Cairo–Aswan, caravan routes across desert; Mohammedans; cap. Cairo; chief spt. Alexandria; a. 386,198 sq. m.; p. (estd. 1950) *20,439,000*.
Ehen, *R.*, Cumberland, Eng.; issues from Ennerdale Water to Irish Sea; length 12 m.
Ehrenbreitstein, *t.*, *fort.*, Germany; on R. Rhine opposite Koblenz.
Eibar, *c.*, Guipuzcoa, N. Spain; iron, steel mftg.; p. *11,772*.
Eibenstock, *t.*, Saxony, Germany; p. *7,760*.
Eider, *R.*, Germany; connected with Kiel canal; length 90 m.
Eidsvoll, *t.*, Norway; p. *11,104*.
Eifel, *plateau of ancient rocks*, W. Germany; lies N. of R. Moselle, terminates in steep slope forming W. edge of Rhine gorge between Koblenz and Bonn; drained by Kyll, Ahr, Rur; formerly cultivated, now largely woodland and moorland; farming in valleys; rises to just over 2,000 ft.
Eiger, *mtn.*, one of the highest peaks of the Bernese Oberland, Switzerland; alt. 13,042 ft.
Eigg, *I.*, Inner Hebrides, Scot.; 15 m. S.W. of Malaig; basaltic rocks on cst.; rises to 1,289 ft.
Eilat, *new spt.*, Negev, Israel; on Gulf of Akaba; oil; copper at Timna; p. (estd. 1953) *400*.
Eildon Hills, Roxburgh, Scot.; S. of Melrose; highest point 1,385 ft.
Eilenburg, *t.*, Saxony-Anhalt, Germany; N.E. of Leipzig; rly. junction; machin., chemicals; p. (estd. 1954) *20,600*.
Eindhoven, *t.*, N. Brabant, Netherlands; tobacco, textile, elec. and radio goods; p. (estd. 1955) *152,000*.
Einsiedeln, *t.*, Schwyz, Switzerland; monastery, pilgrim ctr.
Eire, *see* **Ireland, Republic of.**
Eisenach, *t.*, Thuringia, Germany; on R. Hörsel, at foot of Thuringian forest; cars, machin., textiles; birthplace of J. S. Bach; p. (estd. 1954) *52,800*
Eisenberg, *t.*, Thuringia, Germany; pianos, porcelain, cement, machin.; p. (estd. 1954) *15,700*.
Eisenerz Alps, *mtn. range*, Austria; most northerly range of Alps, overlooking Danube valley between Linz and Vienna; impt. iron-ore deposits; alt. from 6,000 to 9,000 ft.
Eisleben, *t.*, Saxony, Germany; birthplace of Luther; machin., copper- and silver-mining ctr.; p. (estd. 1954) *33,400*.
El Alamein, *vil.*, Egypt; in Libyan Desert 60 m S.W. of Alexandria; scene of gr. Allied victory, Second World War.
El Callao, *t.*, Bolivar, st., Venezuela; in ctr. of Guiana Highlands, 125 m. S.E. of Ciudad Bolivar; ctr. of impt. gold-mining region.
El Centro, Cal., U.S.A.; rich agr. a. reclaimed from the desert; p. (1950) *12,590*.
El Dorado, *t.*, Ark., U.S.A.; oil; p. (1950) *23,076*.
El Dorado, *t.*, Kan., U.S.A.; p. (1950) *11,037*.
El Faiyûm or **El Fayum**, *oasis t.*, *cap.* of Faiyûm prov., Egypt; nr. L. Moeris; predynastic arch. finds; lgst. cultivated a. of Egypt outside Nile flood plain; p. (1947) *74,314*.
El Fasher, *cap.*, Darfur Prov., Sudan; p. (estd. 1949) *23,600*.
El Hasa, *dist.*, Saudi Arabia; on Persian Gulf; ch. t. Hofuf.
El Khârga, *oasis*, Libyan desert, Egypt; 85 m. S.W. of Asyut; p. *5,000*.
El Misti, *volcano*, Peru, S. America; N.E. of Arequipa; alt. 19,170 ft.
El Obeid, *cap.*, Kordofan, Sudan; 200 m. S.W. of Khartoum; ivory, gums, ostrich feathers; p. (estd. 1949) *70,100*.
El Oro, *prov.*, Ecuador; cap. Machala; a. 2,238 sq. m.; p. (1950) *89,306*.
El Paso, *t.*, Texas, U.S.A.; on Rio Grande; p. (1950) *130,485*.
El Qantara (El Kantara), *t.*, Egypt; on E. bank of Suez Canal, 21 m. S. of Pt. Said; terminus of Palestine Rly. system; linked by ferry across canal (and temporary swing bridge) to El Qantara (W.) on Egyptian Rly. systems.

El Salvador, *see* Salvador.
El Teniente, *t.*, central Chile; copper-mines; p. *11,761.*
El Turbio, *t.*, S. Argentina; coal.
Elan, *R.*, Radnor, Wales; rises on S.E. sides of Plynlimon, flows S.E. then N.E. into R. Wye at Rhayader; lower valley contains series of 4 lge. reservoirs, length 4 m., capacity 10,000 million gall.; ch. source of water for Birmingham.
Elâzig, *t.*, Turkey; N.E. of Malatya; p. (1945) *23,739.*
Elba, *I.*, off Tuscan cst., Italy; iron ore, wine, marble, salt; Napoleon's first exile here; ch. t. Porto Ferrajo.
Elbasan, *prefecture*, Albania; cap. Elbasan; p. (1941) *110,447.*
Elbe, *R.*, Czechoslovakia, Germany; the Roman "Albis"; rises in Bohemia and flows into N. Sea at Cuxhaven, 65 m. below Hamburg; navigable for 500 m. of total length 725 m.
Elberfeld, *see* Wuppertal.
Elbert, *mtn.*, Col., U.S.A.; alt. 14,420 ft.
Elbeuf, *t.*, Seine-Maritime, France; woollens; p. (1954) *17,293.*
Elblag (Elbing), *spt.*, E. Prussia, Poland; German before 1945; shipbldg., machin., vehicles; p. (1946) *20,924.*
Elbrus Mt., highest point in the Caucasus; alt. 18,526 ft.
Elburz, *mtn. range*, N. Persia; bordering on Caspian Sea; highest peak, Demavend, 18,500 ft.
Elche, *t.*, Alicante, Spain; 15 m. S.W. of Alicante; palm groves; oil, soap; p. (1950) *55,877.*
Eldorado, *radium mine*, N.W. Terr., N. Canada; situated on E. shore of Gr. Bear Lake nr. Arctic Circle; produces 40% of world's radium, sent to Pt. Hope, Ontario, for refining.
Electra, *t.*, N. Texas, U.S.A.; oil; drilling tools and equipment; p. (1950) *4,970.*
Elektrostal, *t.*, R.S.F.S.R.; 35 m. E. of Moscow; p. (1959) *97,000.*
Elephant Butte Dam, N.M., U.S.A.; on Rio Grande, 125 m. above El Paso; built to control flood water; lake, a. 60 sq. m., supplies irrigation water to 780 sq. m. in N.M. and Texas, water also supplied to Mexico.
Elephanta, *I.*, Bombay Harbour, India; cave sculptures.
Elephantine, *I.*, in Nile, Upper Egypt; site of Nilometer.
Eleuthera, *I.*, Bahamas, T.W.I.; p. (1953) *6,070.*
Elgin, *co. t., burgh*, Moray, Scot.; woollens; p. (1951) *10,535.*
Elgon Mt., *extinct volcano*, on bdy. of Kenya and Uganda; 40 m. in diam.; alt. 14,100 ft.; cave dwellings on slopes.
Elie and Earlsferry, *burgh*, Fife, Scot.; summer resort; p. (1951) *1,190.*
Elisabethville, *t.*, Katanga, Belg. Congo; copper-mining ctr.; p. (1950) *103,352.*
Elizabeth, *mftg. t.*, N.J., U.S.A.; univ.; sewing machines, iron, oil-ref.; p. (1950) *112,817.*
Elizabeth, *t.*, N.C., U.S.A.; timber ind.; p. (1950) *12,685.*
Elizabethton, *t.*, Tenn., U.S.A.; manganese; rayon; p. (1950) *10,754.*
Elkhart, *t.*, Ind., U.S.A.; E. of Chicago; paper, machin.; p. (1950) *35,646.*
Elk Mtns., *lofty range*, W. Col., U.S.A.; highest point Castle Peak, alt. 14,115 ft.
Elland, *t., urb. dist.*, W.R. Yorks, Eng.; on R. Calder, 3 m. S.E. of Halifax; woollens; p. (1951) *19,273.*
Ellesmere, *t., urb. dist.*, Shropshire, Eng.; 8 m. N.W. of Wem; mkt., agr.; p. (1951) *2,159.*
Ellesmere, *agr. dist.*, S.I., N.Z.; on Canterbury Plain nr. Christchurch.
Ellesmere I., lge. I. extreme north of Arctic Canada; barren, uninhabited; a. 41,000 sq. m.
Ellesmere Port, *t., urb. dist.*, N.W. Cheshire, Eng.; on Manchester Ship Canal and 9 m. S.S.E. of Liverpool; impt. petrol docks and refinery; metal mftg., paper, engin.; p. (1951) *32,594.*
Ellice, *Is.*, *see* Gilbert and Ellice Is.
Ellichpur, *t.*, Berar, Madhya Pradesh, India; cotton tr.; p. *24,000.*
Ellis I., New York harbour, U.S.A.; impt. sta. for examination of immigrants.
Ellon, *burgh*, Aberdeen, Scot.; on R. Ythan; p. *1,491.*
Ellore, *t.*, Madras, India; cotton goods, carpets, hosiery, oil; p. (1941) *45,862.*
Ellwood, *t.*, Penns., U.S.A.; p. (1950) *12,945.*

Forli, *ancient c.*, Emilia, Italy; silk factories, ironwks.; felt; p. (1951) *77,033*.
Formby, *t.*, *urb. dist.*, Lancs, Eng.; on W. cst., 6 m. S.W. of Southport; p. (1951) *10,429*.
Formentera, *I.*, Balearic Is., S. of Iviza; 13 m. long.
Formia, *t.*, Caserta, Italy; the ancient Formiæ.
Formigine, *t.*, Modena prov., N. Italy; silk, leather; p. *10,985*.
Formosa (Taiwan), *I.*, China, 100 m. E. of mainland; U.S.A. protection; fishing, rice, tea, sugar, camphor, coal, gold; cap. Taihoku; a. 13,890 sq. m.; p. (1957) *9,409,886* (inc. *c.* 1 million refugees and *c.* 1 million Nationalist army).
Formosa, *terr.*, N. Argentina; bordering on Paraguay; timber; cap. Formosa; a. 27,825 sq. m.; p. (estd. 1958) *196,600*.
Fornaes, *c.*, extreme E. point of Jutland.
Forres, *burgh*, Moray, Scot.; nr. mouth of R. Findhorn, 25 m. E. of Inverness; distilling, oat and woollen mills; p. (1951) *4,462*.
Forst, *t.*, Brandenburg, E. Germany; on R. Neisse; E. section of t. Polish since 1945; textiles; p. (estd. 1954) *34,000*.
Fort Augustus, *vil.*, Inverness, Scot.; at S.W. end of Loch Ness; on Caledonian Canal; Fort now Abbey.
Fort Collins, *t.*, Col., U.S.A.; site of Colorado State College of Agriculture and Mechanic Arts; p. (1950) *14,937*.
Fort de France (formerly **Fort Royal**), *cap.*, Martinique, W. Indies; has a land-locked harbour of some 16 sq. m.; exp. rum, sugar; p. (1946) *66,006*.
Fort Dodge, *t.*, Iowa, U.S.A.; on Des Moines R., in rich agr. cty.; grain, pottery, coal; p. *26,000*.
Fort Edward, *vil.*, N.Y., U.S.A.; on Hudson R.; pulp, paper mills; p. (1950) *3,797*.
Fort Frances, *t.*, Ontario, Canada; pulp, lumbering; p. *5,897*.
Fort George, *R.*, Labrador, Canada; flowing into James Bay.
Fort Jameson, *t.*, N. Rhodesia; cotton.
Fort Lamy, *t.*, *cap.*, Chad terr., Fr. Equatorial Africa; p. *18,465*.
Fort Madison, *c.*, Iowa, U.S.A.; meat packing; p. (1950) *14,954*.
Fort Monroe, Va., U.S.A.; at mouth of James R.; p. *2,000*.
Fort St. John, *t.*, B.C., Canada; on Peace R.; p. *600*.
Fort Scott, *t.*, Kan., U.S.A.; maize, wheat, cattle; p. (1950) *10,335*.
Fort Smith, *c.*, Ark., U.S.A.; on Arkansas R.; rly. ctr., cotton, maize, wagons, furniture; p. (1957) *59,959*.
Fort Smith, *t.*, N.W. Terr., Canada; on Slave R.; p. *200*.
Fort Victoria, *t.*, S. Rhodesia; agr. and mining ctr., cattle; historic ruins in Zimbabwe Nat. Park; p. *5,130* (incl. *1,700* Europeans).
Fort Wayne, *c.*, Ind., U.S.A.; rly.-carriage bldg. and machine shops; p. (1950) *133,607*.
Fort William, *c.*, Ontario, Canada; on L. Superior; grain pt.; p. *30,585*.
Fort William, *burgh*, Inverness, Scot.; nr. head of Loch Linnhe, at base of Ben Nevis; p. (1951) *2,661*.
Forth Worth, *c.*, Texas, U.S.A.; rly. and comm. ctr. on Trinity R.; petroleum, meat packing, aeroplanes, oilfield equipment; p. (1950) *278,778*.
Fort Yukon, Alaska, U.S.A.; trading sta. on Yukon R.; p. *274*.
Fortaleza, *cap.*, Ceará st., Brazil; exp. sugar, rubber, cotton, carnauba wax; p. (1950) *280,084*.
Fortescue, *R.*, W. Australia.
Forth, *R.*, Scot.; rises on Ben Lomond, and flows E. into F. of Forth nr. Alloa; length 65 m.
Forth Bridge, *rly. bridge*, Scot.; spans F. of Forth between N. and S. Queensferry; length 1½m.
Forth, Firth of, *lge. inlet*, E. cst. of Scot.; submerged estuary of R. Forth; navigable by lge vessels for 40 m. inland to Grangemouth; other pts., Leith, Rosyth (naval), Bo'ness; length (to Alloa) 50 m., width varies from 1 to 13 m.
Forth and Clyde Canal, Scot.; links F. of Forth at Grangemouth, and F. of Clyde at Glasgow; length 38 m.
Fortrose, *t.*, *burgh*, Ross and Cromarty, Scot.; on S. cst. of Black Isle, on Moray Firth; p. (1951) *882*.
Fortune Bay, *inlet*, S. cst. of Newfoundland, Canada.
Fossano, *t.*, Italy; nr. Turin; cath.; paper, silk; p. *21,850*.
Fostoria, *t.*, Ohio, U.S.A.; glass, quarries, stockyards; p. (1950) *14,351*.
Fotheringay, *vil.*, on R. Nen, Northampton, Eng.; Mary Queen of Scots beheaded in F. Castle, 1587.
Fougères, *t.*, Ille-et-Vilaine, France; cas.; p. (1954) *23,151*.
Fougerolles, *t.*, Haute-Saône, France.
Foula, I., Shetland Is., Scot.; westward of main gr.
Foulness Island, Essex, Eng.
Foulweather, *C.*, Ore., U.S.A.
Fountains Abbey, fine ruin, Cistercian, founded 1132, W.R. Yorks, Eng.; nr. Ripon.
Fourchambault, *t.*, Nièvre, France; on R. Loire; p. *4,817*.
Fourmies, *t.*, Nord, France; nr. Valenciennes; p. (1954) *13,414*.
Foveaux Strait, N.Z.; separates S.I. from Stewart I.
Fowey, *spt.*, *mun. bor.*, Cornwall, Eng.; on W. of Fowey estuary, 22 m. W. of Plymouth; seaside resort, fishing; exp. kaolin; p. (1951) *2,344*.
Foxboro, *t.*, Mass., U.S.A.; mnfs. light metal goods; p. (1950) *7,030*.

Fox Is., one of the Aleutian Is. gr.
Foxe Basin and Channel, to N. of Hudson Bay, between Baffin I. and Southampton I.
Foxe Peninsula, Baffin I., Franklin, Canada.
Foxton, *bor.*, N.I., N.Z.; p. (1951) *2,226*.
Foyers, *falls*, Inverness, Scot.; E. of Loch Ness, nr. Fort Augustus; aluminium wks., hydro-elec. scheme.
Foyle, Lough, estuary of Foyle R., between Donegal and Londonderry, N. Ireland.
Foynes, *spt.* and *airport*, Ireland; on S. shore of Shannon estuary 20 m. S.W. of Limerick; imports coal, petroleum; impt. refuelling base on trans-Atlantic air services (mainly American) from U.S.A. to Europe.
Framingham, *industl. t.*, Mass., U.S.A.; 10 m. W. of Boston; p. (1950) *28,086*.
Framlingham, *mkt. t.*, E. Suffolk, Eng.; 15 m. N.E. of Ipswich.
Francavilla, *t.*, Lecce, Italy; wine, oil, leather; p. *21,375*.
France, *rep.* (*former monarchy and empire*), W. Europe, bounded N. by Belgium and English Channel, W. by the Bay of Biscay, S. by the Pyrenees and the Mediterranean, E. by Italy, Switzerland and Germany. Greatest length about 600 m., greatest breadth 540 m.; a. 212,600 sq. m., or 3½ times size of England and Wales; F. is divided into 90 metropolitan deps.; ch. ts. are Paris (the cap., the fifth lgst. c. in Europe), Bordeaux, Marseilles, Lyons, Lille, Nice and Toulouse. Cols. and dependencies of France, in Asia, America and Africa, have an area of about 5,120,000 sq. m.; ch. mtns.: Cevennes, Jura, Vosges, Pyrenees; ch. Rs.: Seine, Loire, Rhône, Garonne; climate, temperate; agr.: wheat, oats, potatoes, sugar-beet, vine, fruits, silk, cattle, sheep, dairying; minerals: coal, iron, bauxite, potash; mnfs.: iron and steel, machin., textiles; communications excellent; p. of the Rep (1960) *43,355,000*.
Franceville, *t.*, Middle Congo terr., Fr. Equatorial Africa; on R. Ogowe; p. *1,000*.
Francisco Morazán, *dep.* central Honduras; a. 3,870 sq. m.; p. (1950) *209,395*.
Francis Lake, *L.*, Yukon, Canada.
Francistown, *gold-mining t.*, Bechuanaland, Africa; p. *10,000*.
Frankental, *t.*, Rhineland Palatinate, Germany; N.W. of Mannheim; engin., farm implements, metallurgy, cork; p. (estd. 1954) *27,500*.
Frankfort, *t.*, Ky., U.S.A.; mining, horse-breeding; p. (1950) *11,916*.
Frankfort, *t.*, Ind., U.S.A.; p. (1950) *15,028*.
Frankfurt-on-Main, *c.*, Hessen, W. Germany; restored cath.; univ.; birthplace of Goethe; machin., cars, chemicals, publishing, transshipment pt., impt. airfield; p. (estd. 1954) *601,800*.
Frankfurt-on-Oder, *t.*, Brandenburg, Germany; 50 m. from Berlin; gr. route ctr.; machin., iron; E. section of t. Polish since 1945; p. (estd. 1954) *59,000*.
Frankischer (**Franconian**) **Jura**, *plateau with steep N.-facing edge*, S.W. Germany; runs 80 m. S.W. from Fichtel Gebirge (Fir Mtns.), highest elevation just exceeds 3,000 ft.; drained by Regnitz Altmühl; slate quarrying; vine, maize in sheltered valleys.
Franklin, *t.*, N.H., U.S.A.; p. (1950) *6,552*.
Franklin, *bor.*, N.J., U.S.A.; ctr. of U.S. zinc ind.; p. (1950) *3,864*.
Franklin, c., Penns., U.S.A.; petroleum, oil-well tools, rolling stock; p. (1950) *10,006*.
Franklin, *t.*, Tasmania, Australia; 20 m. from Hobart; principal fruit-growing dist. in island.
Franklin, *dist.*, N.W. Terr., Canada; comprising the Is. of Arctic Canada from Banks I. to Baffin I., including Boothia Peninsula and Melville Peninsula; sparsely populated; furs; a. 554,032 sq. m.
Frantiskové Lázne (**Franzenbad**), *t.*, *wat. pl.*, Czechoslovakia.
Franz Josef Land, U.S.S.R., *archipelago* in Arctic Ocean; N. of Novaya Zemlya; a. 7,050 sq. m.; mainly ice-covered.
Frascati, *t.*, Italy; 12 m. S.E. of Rome; summer resort; famous villas and arch. remains; p. *11,425*.
Fraser, *R.*, B.C., Canada; famous salmon fisheries; length 750 m.
Fraserburg, *agr. t.*, C. of Good Hope, S. Africa; supply sta. for stock-raisers between Calvinia and Carnarvon.
Fraserburgh, *cst. burgh*, N.E. Aberdeen, Scot.; extreme N.E. of Buchan peninsula; impt. herring fishery; granite; p. (1951) *10,444*.
Fraserville, *t.*, Quebec, Canada; on St. Lawrence R.
Fratta Maggiore, *t.*, Italy; 6 m. from Naples; p. *18,100*.
Frauenfeld, *cap.*, Thurgau, Switzerland; cas.; cotton; p. *9,581*.
Fray Bentos, *t.*, *cap.*, Rio Negro, Uruguay; on R. Uruguay 50 m. from its mouth; meat canning and salting, meat extracts; p. (1942) *18,000*.
Frechen, *t.*, N. Rhine–Westphalia, Germany; W. of Cologne; lignite, pottery; p. (estd. 1954) *21,100*.
Fredericia, *spt.*, *t.*, Veile, Jutland, Denmark; traffic ctr., barracks; rly. wks. tobacco, cottons; new bridge over Little Belt; p. (1945) *22,963*.

Fulda, *R.*, Central Germany; with the Werra forms the R. Weser.

Fulham, *metropolitan bor.*, London, Eng.; on R. Thames; p. (1951) *122,047.*

Fullerton, *t.*, Cal., U.S.A.; p. (1950) *13,958.*

Fulton, *t.*, Mo., U.S.A.; firebrick and shoe factories; p. (1950) *10,052.*

Fulton, *c.*, N.Y., U.S.A.; woollens, cutlery, paper; p. (1950) *13,922.*

Fulwood, *urb. dist.*, Lancs, Eng.; 2 m. N.E. of Preston; p. (1951) *13,087.*

Funchal, *t., spt., cap.*, Madeira; winter resort; wine; p. *70,000.*

Fundy, Bay of, *inlet* between Nova Scotia and New Brunswick, Canada.

Furneaux, *Is.*, gr. in Bass Strait, belonging to Tasmania.

Furnes, *industl. t.*, Belgium; nr. Bruges; p. *7,569.*

Furness, *dist.*, N.W. Lancs, Eng.; between Morecambe Bay and the Irish Sea; haematite iron ore.

Fürstenwalde, *industl. t.*, Brandenburg, E. Germany; on R. Spree; metallurgy, leather; p. (estd. 1954) *21,900.*

Fürth, *t.*, Bavaria, Germany; nr. Nürnberg; toys, metallurgy, glass, paper, radio, footwear, brewing; p. (estd. 1954) *100,500.*

Fusan, *see* Pusan.

Fushiki, *t., spt.*, Honshu, Japan; on Toyama Bay to E. of Noto Peninsula; lge. coastwise tr. in rice from Koga and Toyama plains; exp. chemicals, lumber, metals; imports metals, coal, bean-cake, flax.

Fushun, *c.*, Liaoning, N. China; at foot of Changpai Shan, 22 m. S.E. of Shenyang (Mukden); most impt. coal-mines in Far East; possesses world's thickest bituminous coal seam (417 ft.) worked by deep and open-cast mines; p. (estd. 1952) *233,000.*

Fushimi, *c.*, Honshu, Japan; sub. of Kyoto; p. *29,700.*

Fusing, *c.*, Jehol, N. China; p. (estd. 1941) *166,186.*

Futa, La, *pass*, Tusco-Emilian Apennines, N. Italy; used by main road from Bologna to Florence; alt. 2,962 ft.

Futa Jalon, *upland dist.*, Senegambia, Fr. W. Africa; cap. Timbo.

Futuna and Alofi, *Is.*, S. of Wallis Is., dependency of Fr. Col. of New Caledonia; p. about *2,000.*

Fuyu, *t.*, Manchuria; on Sungari R.; agr.; p. *57,065.*

Fylde, *rural dist., geographical sub-region*, W. Lancs., Eng.; extends along W. cst. between estuaries of Ribble and Wyre; low, flat plain behind coastal sand dunes, covered by very fertile glacial deposits; intensively cultivated where drained, grain, vegetables; impt. pig and poultry rearing dist.; ch. t., Blackpool, famous holiday resort; p. (rural. dist., 1951) *16,219.*

Fyn, *second lgst. I.*, Denmark; in the Baltic Sea; a. 1,320 sq. m.; cap. Odense.

Fyne, *loch* on Argyll cst. W. Scot.; an arm of F. of Clyde; length 40 m.

Fyvie, *par.*, Aberdeen, Scot.; on R. Ythan; p. (1951) *3,006.*

Fyzabad, *t.*, Uttar Pradesh, India; sugar; p. *55,215.*

G

Gabes, *spt.*, Tunisia, on G. of Gabes, 200 m. S. of Tunis, dates, henna, wool; p. *22,512.*

Gabun, *aut. rep.* within Fr. Community, Equatorial Africa; cap. Libreville; ivory, ebony, palm-oil; a. 101,400 sq. m.; p. (1957) *404,000.*

Gadag, *t.*, Bombay, India; cotton and silk weaving; p. *25,000.*

Gadsen, *industl. t.*, Ala., U.S.A.; cotton, cars, coal, iron, steel; p. (1950) *55,725.*

Gaeta, *spt., fort*, Caserta, Italy; 40 m. N.W. of Naples; the ancient Caietae Portus; cath.; p. *22,882.*

Gaffney, *t.*, S.C., U.S.A.; limestone, textiles; p. (1950) *8,123.*

Gafsa, *t.*, Tunisia; phosphates; p. *11,320.*

Gagny, *commune*, Seine-et-Oise, France; light inds.; p. (1954) *17,255.*

Gaillac, *t.*, Tarn, France; wines; p. (1954) *8,356.*

Gaillard Cut, *excavated channel*, Panama Canal Zone; carries Panama Canal through Culebra Mtn. from L. Gatun to Pac. Oc.; length 7 m.

Gainesville, *t.*, Fla., U.S.A.; p. (1950) *26,681.*

Gainesville, *t.*, Ga., U.S.A.; p. (1950) *11,936.*

Gainesville, *t.*, Texas, U.S.A.; p. (1950) *11,246*.
Gainsborough, *mkt. t.*, *urb. dist.*, Lincs., Eng.; on R. Trent, 15 m. N.W. of Lincoln; shipping, agr. implements, engin., milling, malting, timber; p. (1951) *17,509*.
Gairdner, *L.*, S. Australia; 130 m. long, 23 m. broad.
Galápagos, *volcanic Is.*, Pac. Oc.; 600 m. W. Ecuador; administered by Ecuador; peculiar fauna and flora; guano; a. 2,868 sq. m.; p. *1,000*.
Galashiels, *burgh*, Selkirk, Scot.; on Gala Water, 2 m. above confluence with R. Tweed; tweeds, woollens; p. (1951) *12,496*.
Galati, *Black Sea pt.*, Romania, on Danube R.; naval base; engin., p. (1948) *80,411*.
Galatina, *t.*, Apulia, Italy; p. *20,300*.
Galena, *t.*, Kan., U.S.A.; lead; p. (1950) *4,029*.
Galena, *t.*, Ill., U.S.A.; lead, zinc, marble, granite; p. (1950) *4,648*.
Galesburg, *t.*, Ill., U.S.A.; engin.; p. (1950) *31,425*.
Galicia, *former Austrian prov.*, Polish 1918–39, since 1939 E. part transferred to Ukrainian S.S.R. and W., remaining Polish (provs. Kraków and Rzeszów); mountainous; agr., paper, pottery, leather.
Galicia, *old prov.*, N.W. Spain; now forming provs. of La Coruña, Lugo, Orense and Pontevedra; mountainous; dairying; mining, lead, copper, iron; p. *2,200,000*.
Galilee, *N. div.* of Palestine in Roman period, containing Capernaum, Nazareth.
Galilee, Sea of (**Lake Tiberias**) (formerly Sea of Chinnereth, L. of Gennesaret), 13 m. long; greatest width 7 m., 686 ft. below sea-level.
Galion, *t.*, Ohio, U.S.A.; mftg.; rly. ctr.; p. (1950) *9,952*.
Galla and Sidamo, *prov.*, Ethiopia.
Gallarate, *commune*, Lombardy, N. Italy; cotton weaving; p. *24,505*.
Galle, *spt.*, Ceylon; on S.W. cst.; extensive tr. in tea, coconut oil; p. (1953) *55,874*.
Galleana, *mkt. t.*, Leon Prov., Mexico; at foot of Sierra Madre Oriental, 120 m. S. of Monterrey; focus of tr. between tropical lowlands and high plateau.
Gallego, *R.*, N.E. Spain; rises in Pyrenees, flows S. to R. Ebro at Zaragoza; R. provides water for irrigation around Zaragoza; valley used by main rly. across Pyrenees from Pau (France) to Zaragoza; length 110 m.
Gallegos, *t.*, *cap.*, Santa Cruz terr., Argentina; p. *7,003*.
Gallipoli, *spt.*, Italy; on E. shore G. of Taranto; p. *12,200*.
Gallipoli, *see* **Gelibolu**.
Gallipolis, *t.*, Ohio, U.S.A.; p. (1950) *7,871*.
Gällivare, *t.*, N. Sweden; inside Arctic Circle, 120 m. N.W. of Lulea; iron ore; p. *21,666*.
Galloway, *dist.*, S.W. Scot.; inc. the cos. of Wigtown and Kirkcudbright.
Galloway, Mull of, extreme S.W. point of Scot.
Gallup, *t.*, N.M., U.S.A.; coal, wool, sheep, cattle rearing; p. (1950) *9,133*.
Galston, *burgh*, Ayr, Scot.; on R. Irvine, nr. Kilmarnock; hosiery, lace; p. (1951) *4,560*.
Galt, *t.*, Ontario, Canada; mnfs.; p. *15,346*.
Galty Mtns., Tipperary, Ireland; alt. 3,000 ft.
Galveston, *spt.*, Texas, U.S.A.; on I. in G. of Mexico; gr. cotton pt.; mills, foundries; p. (1950) *66,568*.
Galway, *co.*, Galway Bay, Connacht, Ireland; fishery, cattle, marble quarrying; a. 2,452 sq. m.; p. (1956) *155,441*.
Galway, *t.*, *cap.*, Galway, Ireland; p. (1951) *21,316*.
Gambela, *tr. sta.*, leased to Sudan by Ethiopia; p. *15,013*.
Gambia, *Brit. Col.* and *Protectorate*, W. Africa; narrow terr., average 20 m. wide, extends 200 m. inland astride R. Gambia; hot all year, summer rain; savannah grassland; ground-nuts, palm-kernels, bees-wax, hides; cap. Bathurst; a. 29 sq. m. (col.), 3,974 sq. m. (protectorate); p. col. (estd. 1956) *28,820*; prot. (estd. 1957) *237,084*.
Gambia, *R.*, Fr. W. Africa and Gambia Col. and Protectorate; rises in Futa Jallon Plateau, flows N. and W. into Atl. Oc. at Bathurst; forms main means of communication through Gambia Protectorate.
Gananoque, *t.*, Ontario, Canada; p. *4,044*.
Gander, *airport*, Newfoundland, Canada; p. (1956) *4,929*.
Gandia, *t.*, Valencia, Spain; p. *19,975*.
Ganges, *gr. sacred R.*, India; rises in Himalayas and flows to Bay of Bengal, by several delta mouths, on one of which stands Calcutta. Delta very fertile and densely populated. Navigable for lge. ships from Allahabad; length 1,500 m.
Gangpur, former *st.*, now inc. in Bihar st., Indian Union; agr., rice; a. 2,477 sq. m.; p. (1941) *398,771*.
Ganjam, *t.*, Orissa, India; S.W. of Cuttack; p. *5,100*.
Gao, *t.*, Fr. W. Africa; p. *9,000*.
Gap, *c.*, Hautes Alpes, S.E. France; silk and other textiles; p. (1954) *12,317*.
Gard, *Mediterranean dep.*, France; cap., Nîmes; vines, olives, sericulture; a. 2,270 sq. m.; p. (1954) *396,742*.
Garda, *L.*, between Lombardy and Venezia, Italy; a. 143 sq. m.; greatest depth, 1,135 ft.
Garden City, *t.*, N.Y., U.S.A.; p. (1950) *14,486*.
Gardena, *t.*, S.W. Cal., U.S.A.; mkt.-gardening; p. (1950) *14,405*.
Gardiner, *t.*, Me., U.S.A.; p. (1950) *6,649*.
Gardner, *t.*, Mass., U.S.A.; chair mftg.; p. (1950) *19,581*.
Garelochhead, *vil.*, Dunbarton, Scot.; summer resort; p. *1,300*.
Garfield, *t.*, N.J., U.S.A., p. (1950) *27,550*
Garfield Heights, *t.*, Ohio, U.S.A.; iron, steel, oil refineries, abrasives; p. (1950) *21,662*.
Garhwal, *dist.*, Uttar Pradesh, India; on S. slopes of Himalayas; forested; tea, grain, coarse cloth; a. 5,612 sq. m.; p. (1941) *485,000*.
Garmisch-Partenkirchen, *t.*, Bavaria, Germany; nr. Austrian frontier; spa and winter sports. p. (estd. 1954), *25,700*.
Garoet, *t.*, W. Java, Indonesia; mtn. resort; p. *24,219*.
Garo Hills, *mountainous dist.*, Assam, India; a. 3,140 sq. m.; dense forests; p. *180,000*.
Garonne, *R.*, S.W. France; rises at foot of Mt Maladetta (Pyrenees), and enters the Gironde estuary 20 m. below Bordeaux; length 350 m.
Garonne, Haute, *dep.*, S. France; a. 2,458 sq. m.; p. (1954) *525,669*.
Garrigue, *region*, Languedoc, S. France; low limestone hills, run N.E. to S.W., W. of Rhône delta; semi-arid; scanty vegetation; winter pasture for sheep, olives; Montpellier, Nîmes located on S. flank.
Garston, *spt.*, Mersey estuary, Lancs, Eng.; docks; p. *28,000*.
Gary, *t.*, Ind., U.S.A.; at S. end of L. Michigan; steel, tin-plate; p. (1950) *133,911*.
Gas City, *t.*, Ind., U.S.A.; glass; p. (1950) *3,787*.
Gascony, *ancient prov.*, *duchy*, S.W. France.
Gaspé, *peninsula*, Quebec, Canada; on S. side of St. Lawrence.
Gastein, *t.*, Salzburg, Austria; mineral springs.
Gastonia, *c.*, N.C., U.S.A.; p. (1950) *23,069*.
Gateshead, *t.*, *co. bor.*, Durham, Eng.; on R. Tyne, opposite Newcastle; engin.; p. (1951) *115,017*.
Gatesville, *t.*, Texas, U.S.A.; cotton processing; p. (1950) *3,856*.
Gatineau, *R.*, Canada; trib. of Ottawa R., which it joins nr. Ottawa; length 300 m.
Gatooma, *t.*, S. Rhodesia; farming, mining and cotton mnfs., gold, mineral deposits; p. *6,600* (incl. *2,000* Europeans).
Gatun, *artificial L.*, Panama Canal Zone, Central America; passed through by Panama Canal; alt. 40 ft. above Caribbean Sea; a. 250 sq. m.
Gatwick, Surrey–Sussex border; 25 m. S. London; 1st airport in world where trunk road, main rly. line and air facilities combined in one unit.
Gauhati, *t.*, Assam, India; silk, cotton, lace, oil refinery; p. *17,000*.
Gauri-Sankar, *mtn.* in Himalayas; 35 m. W. of Mt. Everest; alt. 23,440 ft.
Gävle, *spt.*, Sweden; textiles, sail-cloth; exp. wood-pulp; p. (1950) *46,894*.
Gävleborg, *co.*, Sweden; ch. t., Gävle; a. 7,610 sq. m.; p. (1950) *285,024*.
Gawler, *t.*, S. Australia; iron foundries; p. *4,427*.
Gaya, *t.*, Bihar, India; famous Buddhist pilgrim ctr.; cottons, silks; p. (1951) *133,700*.
Gaza, *spt.*, Israel; exp. cereals, wool; p. (1946) *37,820*.
Gayyarah, Mosul, Iraq; bitumen refinery.
Gaziantep, *t.*, Turkey; S.W. of Malatya; p. (1945) *62,873*.
Gdansk. *prov.* (*voivodship*), Poland; ch. t. Gdansk (Danzig); a. 4,290 sq.m.; p. (estd. 1950) *898,939*.
Gdansk (**Danzig**), *spt.*, Poland; on R. Vistula;

formerly Polish, Prussian (1713–1919), constituted Free City by Treaty of Versailles; 1939–45 German; restored to Poland 1945; shipbldg., distilling, brewing, machin.; p. (1957) *266,000*.

Ili, *R.*, Central Asia; rises in Tien Shan and flows into L. Balkhash; length 850 m.

Ilia (**Elis**), *prefecture*, S. Greece; cap. Pyrgos; p. (1940) *189,729*.

Ilion, *t.*, N.Y., U.S.A.; firearms; office equipment; p. (1950) *9,363*.

Ilkeston, *t.*, *mun. bor.*, Derby, Eng.; 7½ m. W. of Nottingham; coal, iron, engin., locknit fabrics, needles, plastics; p. (1951) *33,674*.

Ilkley, *t.*, *urb. dist.*, *spa*, W.R. Yorks, Eng.; on R. Wharfe 15 m. N.W. of Leeds; local mkt.; p. (1951) *17,265*.

Ill, *R.*, E. France; rises in Jura Mtns., flows N. through Mulhouse, Colmar, Strasbourg, enters Rhine 12 m. below Strasbourg; length 135 m.

Illawara, *dist.*, N.S.W., Australia; forming belt of land between S. tableland and cst.; very fertile; dairy farming; coal seams; ch. ts., Kiama, Wollongong, Bulli, Geringong.

Ille-et-Vilaine, *dep.*, N.W. France; on English Channel; a. 2,699 sq. m.; agr.; cap, Rennes; p. (1954) *586,812*.

Illimani, Mt., nr. La Paz, Bolivia; 21,184 ft.

Illinois, *st.*, U.S.A.; named after its principal R.; a large trib. (360 m.) of Mississippi R.; cap. Springfield; lgst. t. Chicago; a. 56,400 sq. m.; p. (1950) *8,712,176*.

Illogan, *vil.*, Cornwall, Eng.; N.W. of Redruth; tin, copper; p. (par.) *8,300*.

Illyria, *region*, mainly Jugoslavia, stretching along Adriatic Sea from Trieste in N. to Albania in the S. and inland as far as Rs. Danube and Morava.

Ilmen, *L.*, S. of Novgorod, Russia; a. 360 sq. m.; fisheries.

Ilmenau, *t.*, Thuringia, Germany; at N. base of Thüringer Wald, S.S.E. of Gotha; porcelain, toys, glass; p. (estd. 1954) *19,500*.

Ilminster, *t.*, *urb. dist.*, Somerset, Eng.; 10 m. S.E. of Taunton; cutstone, concrete, collars, radio valves; p. (1951) *2,610*.

Ilobasco, *c.*, Salvador, Central America; cattle, coffee, sugar, indigo; p. *21,225*.

Iloilo, *cap.*, prov. of Iloilo, Panay, Philippines; coconut oil; p. (1948) *110,122*.

Ilorin, *t.*, N. Nigeria, Brit. W. Africa; on Lagos–Kano rly.; agr. and caravan ctr.; p. (1946) *54,686*.

Ilsley, *t.*, Berks, Eng.; 11 m. S. of Abingdon; sheep mkts. and fair.

Iluka, *spt.*, N.S.W., Australia; on Clarence R., N. of Sydney.

Imabari, *t.*, *spt.*, N.W. Shikoku, Japan; on shore of Inland Sea; mnfs. cotton textiles, paper, canned fruits; p. (1947) *55,557*.

Imbabura, *prov.*, Ecuador; a. 2,414 sq. m.; cap. Ibarra; p. (1950) *146,893*.

Imbros, *Turkish I.*, Ægean Sea; fertile fruit-growing dist.

Immingham, *pt.*, Lindsey, Lincoln, Eng.; on S. cst. of Humber, 8 m. N.W. of Grimsby; lge. docks; p. *2,200*.

Imola, *t.*, Italy; S.E. of Bologna; cath.; glass, pottery; p. *37,000*.

Imperial Valley, S. Cal., U.S.A.; extends 30 m. S.E. from Salton Sea to Mexican bdy.; mainly below sea-level; hot, arid climate; cotton, dates, wheat under irrigation; water brought from Colorado R. by Imperial Canal (Laguna Dam) and All-American Canal (Imperial Dam) nr. Yuma; total irrigated a. (1938) 700 sq. m.

Imphal, *ch. t.*, Manipur, India; p. *80,000*.

Inari L., *extensive L.*, Lappi, Finland; outlet into Barents Sea; a. 685 sq. m

Inca, *t.*, I. of Majorca, Spain; p. *10,547*.

Ince-in-Makerfield, *urb. dist.*, Lancs., Eng.; nr. Wigan; coal, cotton, engin., wagon-bldg.; p. (1957) *20,080*.

Inchgarvie, *islet*, F. of Forth, Scot.; forms central support of the two gr. spans of Forth Bridge.

Inchkeith, *fortfd. I.*, F. of Forth, Fife, Scot.

Inchon, *spt.*, S. Korea; on W. cst.; exp. soya beans, rice; p. (1949) *265,767*.

Indan, *mun.*, Luzon, Philippine Is.; rice; p. *11,240*.

Independence, *t.*, Mo., U.S.A.; on prairie, S. of Missouri R.; p. (1950) *39,963*.

Independence, *t.*, Iowa, U.S.A.; p. (1950) *4,865*.

Independence, *t.*, Kan., U.S.A.; p. (1950) *11,335*.

India, *peninsula subcontinent*, Asia; now subdivided into the Dominion of the Union of India, the Dominion of Pakistan, the Dominion of Ceylon; ch. mtns.: Himalayas (Everest 29,002 ft.), E. and W. Ghats, Sulaimain range, Hindu Kush, Karakoram; Ganges Plain, Thar desert; ch. Rs.: Indus, Ganges, Brahmaputra; climate: monsoonal; vegetation: dense forests in region of high rainfall; sal, teak; elsewhere savannah or jungle, bamboo; coconuts on cst.; variety of races; inds.: agr., rice, wheat, millet, sugar-cane, cotton, jute, tea, rubber, linseed, cattle, sheep, goats; forests, timber; minerals: coal, petroleum, manganese, lead, gold, silver; mnfs.: cottons, jute, milling, engin., machin., brass, carpets; communications: good rail and sea; total a. 1,606,742 sq. m.; total p. (1951) approx. *433,000,000*.

India (**Indian Union**), *free and independent rep.*, within the Commonwealth; consisting of 14 States and 6 Union Territories administered by the Central Government; ch. ts.: Delhi and Bombay; mnfs.: metal wks., jute, cotton, tea, rice, sugar, rubber; a. *1,139,000* sq. m.; p. (1954) *376,750,000*.

India, French, possessions of France in India were the four settlements, Karikal, Mahé, Pondicherry, and Yanaon; now integrated in India.

India, Portuguese, consists of Gôa, (Pangim), Angediva São Jorge and Morcegos Is., on Malabar cst.; Daman (*Port.* Damão), Dadarā and Nagar-Aveli on G. of Cambay, and Diu with Gogola and Simbor on S. cst. of Bombay; salt wks., coconuts, fish, spices, manangese; cap. Gôa (Pangim); a. 1,537 sq. m.; p. (1940) *624,177*.

Indian Harbour, Labrador cst., nr. Hamilton Inlet, Canada.

Indian Ocean extends from S. of Asia and E. of Africa to the C. of Good Hope and C. Leeuwin in Australia, separated from the Pacific by the Malay Archipelago and Australia; a. 29,340,000 sq. m.

Indian Territory, since 1907 part of the st. of Okla., U.S.A.; Indian reservations have an a. of 5 sq. m.

Indiana, *st.*, between Kentucky and Michigan, Illinois and Ohio, U.S.A.; agr., coal, limestone, clay, petroleum; cap. Indianapolis; a. 36,291 sq. m.; p. (1950) *3,934,224*.

Indianapolis, *cap.*, Ind., U.S.A.; on White R.; impt. rly. ctr.; meat packing; p. (1950) *427,173*.

Indianola, *t.*, W. Miss., U.S.A.; cotton mkt.; processing plants; p. (1950) *4,369*.

Indigirka R., Yakut, U.S.S.R.; flows into Laptev Sea.

Indo-China, Asia; federation in French Union until end of hostilities July 1954. Consists of the three sts. of Viet-Nam, Cambodia and Laos; rice, rubber, pepper, hides; coal, zinc, tin; a. 286,000 sq. m.; p. *27,030,000*.

Indonesia, *rep.* (comprising Java, Sumatra, Borneo, Celebes, 15 minor Is., thousands of smaller ones); climate: tropical, abundant rainfall; vegetation: equatorial forest; race: Malay; agr.: rice, maize, sweet potatoes, sugar-cane, coffee, tea, tobacco, oil palms, cinchona spices, rubber; petroleum, tin; communications poor; cap. Jakarta (Batavia); p. (1955) *77,987,879*.

Indore, *t.*, Madhya Pradesh, Indian Union; in valley of R. Narbada; cotton-mills; p. (1951) *310,859*.

Indre, *dep.*, Central France; agr. and industl.; cap. Châteauroux; a. 2,666 sq. m.; p. (1954) *247,436*.

Indre-et-Loire, *dep.*, Central France; to the N.W.

of Indre; agr., vines, silk factories; cap. Tours; a. 2,377 sq. m.; p. (1954) *364,706*.

Indus, *R.*, Pakistan; rises in Tibet, and flows through Kashmir, Punjab, Sind, to the Arabian Sea; length 1,800 m.

Inebolu, *spt.*, Anatolia, Turkey; nr. Kastamonu, on cst. of Black Sea; tr. in mohair and wool; p. *10,000*.

Infanta, *mun.*, Luzon, Philippine Is.; p. *20,331*.

Ingersoll, *t.*, Ontario, Canada; N.E. of Hamilton; p. *5,000*.

Ingleborough, *mtn.*, near Settle, Yorks, Eng.; limestone; underground caves, stalactites, stalagmites; alt. 2,373 ft.

Ingleton, *vil.*, W.R. Yorks, Eng.; at foot of Ingleborough; ctr. for geologist and tourist; p. (par.) *2,400*.

Inglewood, *mun. bor.*, Victoria, Australia; mining; p. *1,500*.

Inglewood, *c.*, S.W. Cal., U.S.A.; chinchilla farms; furniture; light engin.; p. (1950) *46,185*.

Ingolstadt, *t.*, Bavaria, Germany; on Danube, nr. Munich; cas.; machin., cars, tobacco; p. (estd. 1954) *43,300*.

Inhambane, *spt.*, Mozambique; exp. sugar, copra, oil-seeds; p. *20,000*.

Inishmore, *lgst. of Aran Is.*, Galway, Ireland; 30 m. S.W. of Galway; fishing; p. *1,800*.

Inkerman, *t.*, Crimea, U.S.S.R.; nr. E. extremity of Sevastopol harbour; battle 1854.

Inkpen Beacon, *hill*, Hampshire, Eng.; W. end of N. Downs, 7 m. S.W. of Newbury; highest point reached by chalk hills in England; alt. 975 ft.

Inkster, *t.*, S.E. Mich., U.S.A.; residtl.; p. (1950) *16,728*.

Inland Sea, Japan; length 250 m., breadth 10–40 m.; ch. spts.: Hiroshima, Okayama, Kobe.

Inn, *R.*, traversing Switzerland, the Austrian Tyrol and Bavaria; trib. of R. Danube; the ancient Œnus; enters R. Danube at Passau; length 320 m.

Innerleithen, *burgh and health resort*, Peebles, Scot.; on R. Tweed, 5 m. S.E. of Peebles; woollen cloth and knitwear; p. (1951) *2,361*.

Innisfail, *t.*, Queensland, Australia; ch. sugar-producing ctr. of Australia; p. *4,000*.

Innsbruck, *cap.*, the Tyrol, Austria; on R. Inn; commands N. approach to Brenner Pass; univ.; military stronghold; p. (1951) *94,599*.

Inowroclaw, *t.*, N. Poland; nr. Bydgoszcz; rock-salt, iron pyrites; tr. in agr. prod.; p. *36,000*.

Insein, *dist.*, Lower Burma; a. 1,914 sq. m.; p. *331,145*; *cap.* I.; p. *20,487*.

Insterburg, *see* **Tchernjachowsk**.

Interlaken, *t.*, Bernese Oberland, Berne, Switzerland; on R. Aar, between Ls. Thun and Brienz; tourist resort; p. (1941) *3,771*.

International Falls, *t.*, N. Minn., U.S.A.; rly. ctr.; paper; p. (1950) *6,269*.

Inverallochy, *fishing vil.*, Aberdeen, Scot.; on cst. of Buchan peninsula nr. Fraserburgh.

Inveraray, *burgh, co. t.*, Argyll, Scot.; nr. head of Loch Fyne; herring fishing; p. (1951) *503*.

Inverbervie, *burgh*, Kincardine, Scot.; on E. cst., 8 m. S. of Stonehaven; flax, tow spinning, flock, furniture; p. (1951) *885*.

Invercargill, *c.*, *spt.*, S.I., N.Z.; on S.E. cst.; sawmills, meat-freezing plants; p. (estd. 1958) *37,000*.

Inverell, *t.*, N.S.W., Australia; 383 m. N. of Sydney; p. (1958) *8,080*.

Invergordon, *burgh, spt.*, Ross and Cromarty, Scot.; on N. side of Cromarty Firth, 12 m. N.E. of Dingwall; naval pt.; p. (1951) *1,514*.

Inverkeithing, *burgh*, Fife, Scot.; on N. side of F. of Forth, nr. Dunfermline; shipbldg.; p. (1951) *3,703*.

Inverkip, *par., vil.*, Renfrew, Scot.; 6 m. S.W. of Greenock; par. contains Gourock; wat. pl.; p. (1951) *17,288*.

Inverness, *co.*, Scot.; mountainous and well wooded; rising to Ben Nevis 4,406 ft.; Caledonian Canal crosses co.; little cultivation; deer forests and grouse moors, fishing, sheep breeding, distilleries; a. 4,351 sq. m.; p. (1951) *84,924*.

Inverness, *burgh, co. t.*, Inverness, Scot.; on Moray Firth nr. N.E. end of Caledonian Canal; distilleries, light engin.; fisheries and agr.; p. (1951) *28,115*.

Inverurie, *burgh*, Aberdeen, Scot.; on R. Don, 14 m. N.W. of Aberdeen; rly. ctr., wool fair; p. (1951) *5,054*.

Investigator I., off cst. of Eyre Peninsula, S. Australia.

Inyokern, *t.*, E. Cal., U.S.A.; naval ordnance research sta.; p. *12,000*.

Ioannina (**Janina**), *prefecture*, Epirus, Greece; ch. t. Ioannina; p. (1951) *154,568*.

Ioannina (**Janina**), *t.*, Epirus, Greece; nr. Albanian frontier; embroidery; p. (1951) *33,268*.

Iona, *I.*, off cst. of Mull, Argyll, Scot.; early Scottish Christian ctr.; restored abbey; St. Columba's burial place; ancient burial place of Scottish kings.

Ionian Is., *gr.* in Mediterranean, belonging to Greece, formerly under British protection; comprising Kerkyra, (Corfu), Kephallenia, Zákynthos, Levkás, Ithake, Paxos and Ktherá; suffered from severe earthquakes in Aug. 1953; total a. 752 sq. m.; p. (1951) *228,119*.

Ionian Sea, Mediterranean; between Greece on E; Italy and Sicily on W.

Iowa, *st.*, U.S.A.; prairie cty; over 1,000 ft. above sea-level; watered by Mississippi and Missouri; farming, dairying, maize, wheat, oats, potatoes; coal; cap. Des Moines; a. 56,290 sq. m.; p. (1950) *2,621,073*.

Iowa City, Iowa, U.S.A.; farming, stockbreeding; p. (1950) *27,212*.

Ipoh, *t.*, Perak, Malaya; tin; p. *80,874*.

Ipswich, *co. t., co. bor.*, Suffolk, Eng.; at head of estuary of R. Orwell; agr. implements, brewing, clothing, printing; p. (1951) *104,788*.

Ipswich, *t.*, N.E. Mass., U.S.A.; textiles, printing; p. (1950) *4,952*.

Ipswich, *c.*, S.E. Queensland, Australia; coal, woollens; p. (1957) *41 700*.

Iquique, *c.*, *pt.*, Tarapaca, Chile; iodine and nitrate of soda tr.; p. (1952) *39,576*.

Iquitos, *ch. t.*, Loreto, Peru; shipyards, docks, rubber, cotton, tobacco; p. (estd. 1950) *42,01*

Iraklion (**Heraklion**), *prefecture*, Crete; cap. Iraklion; p. (1940) *168,717*.

Iraklion (**Candia**), *cap.*, Crete; central position on N. cst. at foot of gently sloping, terraced hill slopes; wine, olive oil, fishing; p. (1940) *42,357*.

Iran, *see* **Persia**.

Irapuata, *c.*, central Mexico; agr. ctr.; p *32,337*

Iraq, *rep.* (since July 1958), S.W. Asia; approx. co-extensive with ancient Mesopotamia; ch. Rs.: Tigris, Euphrates; climate, hot, rainless in summer, cool in winter, scanty rainfall; races: Arabs, Kurds; language, Arabic; ch. crops: dates, wheat, maize, barley, beans, cotton; impt. oilfields; communications: rail, Mosul–Baghdad–Persian G.; cap. Baghdad; a. 116,600 sq. m.; p. (1957) *6,538,109*.

Irbit, *t.*, Sverdlovsk region, U.S.S.R.; mkt., famous fair; p. *12,000*.

Ireland, 2nd. lgst. I., Brit. Is.; ch. physical features: L. Neagh in N.E., Rs. Shannon, Boyne, Blackwater, Barrow, Nore, Suir, Liffey; ch. mtn. groups—all near cst.—Mourne Mtns., Wicklow Mtns., Mtns. of Kerry; peat bogs over considerable areas, large areas grassland; climate, mild and damp; vegetation, chiefly meadowland; communications, rail and canal; a. 32,531 sq. m.; greatest length 280 m., width 180 m.; p. (approx.) *4,265,530*.

Ireland, Republic of (**Eire**), *sov. ind. st.* covering 26 of the 32 cos. of Ireland inc. the 3 provs. of Leinster, Munster and Connaught (Connacht) together with 3 of the cos. (Cavan, Monaghan and Donegal), of the former. prov. of Ulster. Ceased to be member of Brit. Commonwealth in 1949; agr.: potatoes, turnips and other root crops, oats, barley, hay, cattle, sheep, pigs, horses; fisheries; mnfs.: grain milling, flour, dairy produce, bacon, brewing, tobacco, clothing, etc.; religion, R.C.; cap. Dublin; a. 26,600 sq. m.; p. (1956) *2,894,822*.

Irian, Indonesian name for Netherlands New Guinea.

Iriga, *mun.*, Luzon, Philippine Is.; hemp, copra, agr.; p. *30,005*.

Iringa, *t.*, Tanganyika; coffee, cattle, fruit; p. *5,000*.

Irish Sea, Brit. Is.; between Gr. Britain and Ireland, connecting N. and S. with Atl. Oc. 200 m. long; 50–140 m. wide; greatest depth 140 fathoms; a. 7,000 sq. m.

Irkutsk, *t.*, R.S.F.S.R.; on R. Angara; on Trans-Siberian Rly.; engin., sawmilling, petroleum refining, chemicals; p. (1959) *365,000*.

Irlam, *t., urb. dist.*, Lancs, Eng.; steel, engin., tar, soap, glycerine, margarine; p. (1951) *15,063*.
Iron County, Utah, U.S.A.; contains vast reserves of iron ore; not yet developed due to inaccessibility.
Iron Gate, Romania; famous rapids in R. Danube.
Iron Knob, *t.*, S. Australia; S.W. of Port Augusta; iron-ore.
Iron Mountain, *t.*, Mich., U.S.A.; former iron mining ctr.; p. (1950) *9,679*.
Ironton, *c.*, Ohio, U.S.A.; machin.; coal, iron, fireclay; p. (1950) *16,333*.
Ironwood, *t.*, Mich., U.S.A.; iron-mining, lumbering; p. (1950) *11,466*.
Irrawaddy, *R.*, Burma; flows S. to Bay of Bengal; navigable for lge. steamers 900 m.; irrigation wks.; length 1,300 m.
Irtysh, *R.*, Siberia, U.S.S.R.; trib. of R. Ob; two-thirds navigable; crossed by Trans-Siberian Rly. at Omsk; length 2,500 m.
Irun, *t.*, N.E. frontier, Spain; nr. San Sebastian; tanning and brandy distillery; paper mills, iron; Roman remains; p. *14,638*.
Irvine, *burgh, spt.*, Ayr, Scot.; nr. mouth of R. Irvine, 7 m. W. of Kilmarnock; hosiery, lt. engin., bottle, chemical wks.; p. (1951) *14,741*.
Irvington, *t.*, N.J., U.S.A.; p. (1950) *59,201*.
Irvington, *t.*, N.Y., U.S.A.; residtl.; light engin.; p. (1950) *3,657*.
Irwell, *R.*, S. Lancs, Eng.; flows past Manchester to the Mersey; length 30 m.
Isarco, *R.*, N. Italy; rises nr. Brenner Pass, flows S. into R. Adige at Bolzano; used by main rail and road routes from N. Italy to Austria; length 50 m.
Ischia, *I.*, in G. of Naples, Italy; saline baths; cap. I.; a. 26 sq. m.; p. *30,000*.
Ischl, *t.*, Austria; wat. pl., saline baths; p. *14,004*.
Isdud (Ashdod), *ancient Philistine c.*, Israel; 20 m. S. of Jaffa.
Ise Bay, *inlet*, S. Honshu, Japan; flanked by ch. textiles mftg. region of Japan containing 5 million people centred on Nagoya; length 40 m., width 15–20 m.
Iselle, *t.*, N.W. Italy; S. terminal of Simplon Pass and tunnel.
Isère, *dep.*, S.E. France; drained by Rs. Isère and Rhône; cap. Grenoble; mtnous.; cereals; wine, butter cheese; iron, coal, lead, silver, copper; gloves, silks; a. 3,178 sq. m.; p. (1954) *626,116*.
Isère, R., S.E. France; rises in W. Alps (Grande Sassière), flows W. into R. Rhône nr. Valence; used to generate hydro-elec.; used, with trib. R. Arc, by main rly. from France to N. Italy through Mt. Cenis (Fréjus) Tunnel.
Iserlohn, *t.*, N. Rhine–Westphalia, Germany; iron, steel, metalwks.; needles; p. (estd. 1954) *47,400*.
Isernia, *t.*, Campobasso, Italy; mnfs.; p. *16,437*.
Iseyin, *t.*, W. Prov., Nigeria, Brit. W. Africa; p. (1946) *48,470*.
Isfahan (ancient Aspadana), *prov.*, Persia; cap. I., former cap. of Persia, on R. Zaindeh; carpet mftg.; woollen and cotton cloth and yarns mftg.; matches; p. (1956) *254,876*.
Ishikari, *t.*, Hokkaido, Japan; on cst. of Otaru Bay, 10 m. N. of Sapporo; ctr. of second lgst. coalfield in Japan; sm. petroleum production.
Ishim, *t.*, R.S.F.S.R.; on R. Ishim, S. of Tobolsk; famous fair, one of the most impt. for agr. produce in Siberia; p. *10,000*.
Ishpeming, *c.*, Mich., U.S.A.; machin., gold, silver, iron, marble; p. (1950) *8,962*.
Isis, *R.*, head stream of R. Thames, Eng.; so named until its confluence with Thames at Dorchester, Oxfordshire.
Iskenderon, *spt.*, Hatay, Turkey; pt. and rly. terminus; p. (1950) *22,946*.
Isla, *R.*, Perth and Forfar, Scot.; trib. of R. Tay; length 40 m.
Islay, *I.*, Inner Hebrides; Argyll, Scot.; 13 m. W. Kintyre; a. 235 sq. m.; farming, dairying, distilleries.
Isle of Grain, *rural a.*, Essex; flat promontory once separated from mainland by a tidal estuary; lge. oil refinery.
Isle Royale, *I.*, in L. Superior, Mich., U.S.A.; length 40 m.
Isleworth, *see* **Heston and Isleworth.**
Islington, *metropolitan bor.*, London, Eng.; N. of City; industl. and residtl.; p. (1951) *235,645*.
Islip, *summer resort*, Long I., N.Y., U.S.A.; p. (1950) *5,254*.
Ismailia, *t.*, Egypt, at mid-point of Suez Canal on L. Timsah, 45 m. N.N.W. of Suez; has rail connections with Cairo, Suez and Port Said; p. (1947) *68,338*.
Isna (Esneh), *t.*, Upper Egypt; caravan ctr.; barrage; p. (1947) *18,458*.
Isonzo, *R.*, Illyria, Italy; flows into Adriatic Sea.
Isparta, *t.*, Turkey; N. of Antalya; p. *17,292*.
Israel, *indep. Jewish rep.*, since 1948; part of former Palestine mandate; cap. Jerusalem, impt. ts. Tel Aviv, Haifa; mainly agr.: grains, vegs., olives, citrus-fruit prod.; heavy and light inds., esp. processed foods, textiles, wearing apparel, pharmaceuticals; little mineral wealth except for potash and other chemicals from Sea of Galilee and Dead Sea; a. 8,050 sq. m.; p. (1958) *2,016,100*.
Issoire, *commune*, Puy-de-Dôme, France; old church; p. (1954) *8,541*.
Issoudun, *t.*, Indre, France; leather, parchment, woollens, farm implements; p. (1954) *12,945*.
Issy, *t.*, France; on R. Seine; sub. of Paris; p. (1954) *47,369*.
Issyk-kul, *L.*, Kirgizia, U.S.S.R.; alt. 4,476 ft.; a. 250 sq. m.; drained by R. Chu.
Istanbul (Constantinople), *ch. spt.*; former cap., Turkey; S. entrance of the Bosporus; Turkish t. (Stamboul) and Christian subs. (Galata and Pera) sep. by the "Golden Horn"; the ancient Byzantium; magnificent mosque of St. Sophia; p. (1955) *1,214,616*.
Istria, *peninsula*, N. Adriatic Sea; formerly Italian, now divided between Jugoslavia and Italy; agr., olives, vines, oranges, maize; rural p. mainly Slavs, ts. mainly Italian.
Ita, *c.*, S. Paraguay; cattle, agr.; leather; p. *16,892*.
Itabira, *t.*, Minas Geraes st., Brazil; on Brazilian Plateau, 60 m. N.E. of Belo Horizonte; lgst. deposits of iron ore in Brazil.
Itabuna, *c.*, E. Brazil; coffee, tobacco; p. *15,868*.
Italy, *rep.*, S. Europe; peninsula 750 m. long and 100–120 m. broad; many Is. (ch. Sardinia, Sicily); mtns. in N. (Alps) and in ctr. and S. (Apennines); ch. R. Po; climate, Mediterranean; wheat and other cereals; vines, olives, fruit; cattle, sheep; sulphur, iron and iron pyrites, mercury, lead, zinc; Carrara marble; hydro-elec. power, and little coal; mnfs.; cottons, silks, sugar, glass, furniture, olive oil; fisheries; cap. Rome; a. 116,235 sq. m.; p. (1956) *49,600,000*.
Itasca, *L.*, a source of Mississippi R., Minn., U.S.A.; alt. 1,575 ft.
Itatiaia, *mtn.*, highest mtn. in Brazil; 9,255 ft.
Itaugua, *t.*, S.W. Paraguay; lace mkg.; p. *11,300*.
Itchen, *R.*, Hants, Eng.; flows to Southampton Water; length 25 m.
Ithaca, *t.*, N.Y., U.S.A.; on Cayuga L.; seat of Cornell Univ.; elec. clocks; p. (1950) *29,257*.
Ithake, *one of the Ionian Is.*, Greece; a. 37 sq. m.; ch. t. Ithake; severe earthquake, 1953.

Kajaani, *t.*, on Oulu L., Finland; p. *8,732*.
Kakamega, *t.*, Kenya, Brit. E. Africa; 30 m. N. of Kisumu; ctr. of gold-mining dist.
Kalabaka, *t.*, Greece; N. of Trikkala; p. *3,690*.
Kalafat, *t.*, Romania; on R. Danube, opposite Vidin.
Kalahari Desert, *gr. infertile tract* of S. Central Africa, between the R. Orange and the Zambesi; mainly in Bechuanaland Protectorate; alt. 3,700 ft.; a. 20,000 sq. m.; inhabited chiefly by Bushmen.
Kalamata, *t.*, Peloponnese, Greece; nr. Sparta; silk ind., figs, currants, olive oil exp.; p. (1951) *38,663*.
Kalamazoo, *t.*, Mich., U.S.A.; rly. ctr., engin.; college; p. (1950) *57,704*.
Kalamita Bay, Black Sea; W. cst. Crimea, U.S.S.R.
Kalat or **Khelat**, *st.*, Baluchistan, Pakistan; a. 53,995 sq. m.; p. (1951) *283,000*.

Kalgan, *see* **Wanchuan.**

Kalgoorlie, *t.*, W. Australia; on Transcontinental rly. route 350 m. E. of Perth; semi-desert conditions; famous gold-mng. a.; p. (1957) *9,965.*

Kalimnos (**Caymnos**), *I.* and *prefecture* Dodecanese, Greece; cap. Kalimnos; p. (1940) *24,393.*

Kalinin, *t.*, R.S.F.S.R.; on trib. of R. Volga; cath.; engin., textiles, chemicals; p. (1959) *261,000.*

Kaliningrad, *prov.*, R.S.F.S.R., U.S.S.R.; cap. K.

Kaliningrad (formerly **Königsberg**), *t.*, formerly E. Prussia, now U.S.S.R.; on R. Pregel; cath.; fine bldgs.; machin., wood-pulp, chemicals, sugar-beet; tea ctr.; p. (1959) *202,000.*

Kalispell, *t.*, Mont., U.S.A.; mkt. for agr. region, lumber; p. (1950) *9,737.*

Kalisz, *t.*, Poland; on R. Prosna; linen factories; p. (1950) *55,140.*

Kalk, *t.*, N. Rhine–Westphalia, Germany; iron and chemical wks.

Kalmar, *co.*, S. Sweden; cap. Kalmar; a. 4,485 sq. m.; p. (1950) *236,847.*

Kalmar, *spt.*, Sweden; on E. cst.; match and tobacco factories, busy tr.; p. (1951) *27,049.*

Kalocsa, *t.*, Hungary; on R. Danube; cath., palace; wine; p. *12,000.*

Kaluga, *t.*, R.S.F.S.R.; on R. Oka; leather, engin., hydro-elec.; p. (1959) *133,000.*

Kalushin, *t.*, Ukrainian S.S.R.; mines salt, potassium; p. *14,699.*

Kalyan, *spt.*, Thana, Bombay, India; p. (1941) *26,291.*

Kama, *R.*, U.S.S.R.; trib. of R. Volga, which it joins S. of Kazan; length 1,400 m.

Kamaishi, *t.*, *spt.*, N.E. Honshu, Japan; serves Kamaishi–Sennin iron-ore field, lgst. worked deposits and reserves in Japan; impt. iron and steel ind.; imports coal, iron ore, machin.; p. (1947) *26,200.*

Kamaran I., Red Sea; under Aden admin.; quarantine sta. for pilgrims travelling to Mecca from the E.; a. 22 sq. m.; p. about *2,200.*

Kamchatka, *peninsula*, E. Siberia, U.S.S.R.; mtns. with volcanoes (Klyuchevsk, alt. 16,512 ft.); mineral wealth, fisheries on cst., climate cold, wet and foggy; cap. Petropavlovsk on E. cst., good roadstead; a. 465,637 sq. m.; p. *6,500.*

Kamen, *t.*, Westphalia, Germany; coal, leather, metals; p. *11,686.*

Kamenets Podolski, *t.*, Ukrainian S.S.R.; brewing, tobacco; p. (1954) *50,000.*

Kamensk, *dist.*, Moldavian S.S.R.; U.S.S.R.

Kamensk, *t.*, R.S.F.S.R.; on N. Donets R.; chemicals; p. (1954) *60,000.*

Kamensk Uralsk, *t.*, R.S.F.S.R.; bauxite, aluminium, iron, steel, engin.; p. (1959) *141,000*

Kamet, *mtn.*, N. Garhwal dist., Himalayas; alt. 25,477 ft.; until 1953 (Everest) highest mtn. climbed (Smythe, 1931).

Kamloops, *c.*, B.C., Canada; on Thompson R.; formerly known as Fort Thompson; on transcontinental rlys.; supply ctr. for mining and grazing dist.; p. (1951) *8,099.*

Kampala, *cap.*, Uganda, Brit. E Africa; ch. comm. ctr. of colony; p. *40,000.*

Kampar, *t.*, Perak, Fed. of Malaya; p. *17,449.*

Kampen, *t.*, Overyssel, Netherlands; on R. Yssel; p. (1951) *24,382.*

Kamp-Lintfort, *t.*, N. Rhine–Westphalia, Germany; Cistercian abbey; coal-mng.; p. (estd. 1954) *28,600.*

Kampot, *spt.*, Cambodia; pepper; p. *3,000.*

Kamyshin, *mftg. t.*, R.S.F.S.R.; on R. Volga; textiles; p. (1959) *55,000.*

Kan Kiang, *R.*, S. China; rises in Nan Shan, flows N. into L. Poyang; valley provides route for main road from Kiangsi prov. to Kwangtung prov. over Meiling Pass.

Kanawha, *R.*, W. Va., U.S.A.; rises in Allegheny Mtns., flows S.W. to Hinton, then turns N.W. across Allegheny Plateau into R. Ohio; lower course runs through ch. mining a. of W. Va. coalfield nr. Charleston; length 350 m. approx.

Kanazawa, *t.*, Kaga, Honshu, Japan; silks and pottery; p. (1947) *231,450.*

Kanchenjunga, *mtn.*, on Nepal-Sikkim bdy., N.E. India; 3rd highest mtn. in world; alt. 28,146 ft.

Kandahar, *prov.*, S. Afghanistan; mountainous; cap. K.; p. (1948) *1,063,496.*

Kandahar, *c.*, former cap., Afghanistan; alt. 3,400 ft.; 370 m. from Herat; p. (1948) *77,186.*

Kandersteg, *t.*, Bernese Oberland, Switzerland; health resort.

Kandy, *t.*, Ceylon; in ctr. of I., 75 m. from Colombo at alt. 3,000 ft.; resort in hot season; tea and cocoa; p. (1953) *57,539.*

Kane, *bor.*, Penns., U.S.A.; natural-gas region; p. (1950) *5,706.*

Kangaroo I., S. Australia; eucalyptus.

Kankakee, *t.*, Ill., U.S.A.; farm implements; machin.; p. (1950) *25,856.*

Kannopolis, *t.*, N.C., U.S.A.; textiles; p. (1950) *28,448.*

Kano, *c.*, N. Nigeria, W. Africa; gr. emporium for the whole Sudan region; impt. airport and rly. terminus; p. (1953) *130,000.*

Kanpur, *see* **Cawnpore.**

Kansas, *st.*, U.S.A.; called the "Sunflower State"; prairie; farming, maize, wheat; cattle, dairying, pigs; coal, petroleum, natural gas, lead, meat-packing, flour-milling; cap. Topeka; a. 82,276 sq. m.; p. (1950) *1,905,299.*

Kansas City, Mo., U.S.A.; on right bank of R. Missouri; gr. livestock mart; p. (1950) *456 622*; adjoins Kansas City, Kansas; meat-packing ctr.; p. (1950) *129,553.*

Kansu, *prov.*, China; inc. former Ningsia prov.; cap. Lanchow; cereals, poppy; a. 151,161 sq. m.; p. (1953) *12,928,102.*

Kanye, *t.*, Bechuanaland Protectorate, S. Africa; cap. of Bangwaketsi tribe; p. *12,000.*

Kaohsiung, *spt.*, Formosa (Taiwan); on S.W. cst.; exp. rice, sugar, oil refining; p. (1957) *275,600.*

Kapfenberg, *commune*, Austria; iron, chemicals, paper; resort; p. (1951) *23,843.*

Kara-Bogaz, *lag. G.* on E. cst. of Caspian Sea, Turkmen S.S.R; very high salinity, impt. deposits of Glauber's salt used in local chemical ind.; a. 7,000 sq. m.

Karachev, *t.*, R.S.F.S R.; hemp factories and oil wks.; p. *10,000.*

Karachi, *spt.*, *cap.*, Pakistan; on the Indus delta; thriving tr. wheat and hides; airport; p. (1951) *1,126,417.*

Karafuto, *see* **Sakhalin.**

Karaganda, *t.*, Kazakh S.S.R.; town built on impt. coalfield; engin.; p. (1959) *398,000.*

Karakorum Mtns., separating E. Turkestan from Kashmir; highest peak K² (Godwin-Austen) 28,250 ft.

Kara-Kum, *see* **Qara Qum.**

Kara Sea, Arctic Ocean; E. of Novaya Zemlya; navigation open July–Sept.

Karatsu, *spt.*, N.W. Kyushu, Japan; coal; p. (1947) *46,442.*

Mercedes, *cap.*, Soriano dep., Uruguay; p. (1942) *24,000.*
Mercedes, *t.*, S. Texas, U.S.A.; cotton, oil, fruit; veg. canning; p. (1950) *10,081.*
Merchanicville, *t.*, N.Y., U.S.A.; on Hudson R.; p. (1950) *7,385.*
Merchantville, *bor.*, N.J., U.S.A.; paper, lead mnfs.; p. (1950) *4,183.*
Mergui, *archipelago*, Burma; teak, rice, pearl fishing.
Mergui, *t.*, Tenasserim, Lower Burma; on Bay of Bengal; pearl fishing; p. *20,405.*
Mérida, *t.*, Badajoz, Spain; on R. Guadiana; agr. dist., textiles; p. *16,000.*
Mérida, *cap.*, Yucatán, Mexico; univ.; sisal-hemp, ropes, cigars, brandy; p. (1950) *155,899.*
Meriden, *c.*, Conn., U.S.A.; hardware mftg.; p. (1950) *44,088.*
Meridian, *t.*, Miss., U.S.A.; in cotton-growing region; p. (1950) *41,893.*
Mérignac, *commune*, Gironde dep., S.W. France; cattle mkt.; p. (1954) *23,050.*
Merioneth, *maritime co.*, N. Wales; pastoral and mining; nuclear power-sta. at Trawsfynydd, due 1964; co. t., Dolgelly; a. 660 sq. m.; p. (1951) *41,456.*
Meriti, *c.*, S.E. Brazil; 10 m. N. Rio de Janeiro; p. (1947) *38,645.*
Merom, Waters of, *L.*, modern Hule L., Upper Galilee, Israel.
Merrick, *mtn.*, Kirkcudbright, Scot.; highest peak in S. Uplands of Scot.; alt. 2,764 ft.
Merill, *t.*, N. Wis., U.S.A.; wooden goods, paper, knitwear; p. (1950) *8,951.*
Merrimac, *R.*, N.H. and Mass., U.S.A.
Merse, *geographical sub-region*, S.E. Scot.; comprises lower valleys of Rs. Tweed and Teviot below Melrose and Hawick; glacial deposits form low hillocks *en échelon*, which largely influence the pattern of streams, roads, settlements, etc.; most favoured part of Scot. for crop growing, wheat, barley, root crops (for feeding to cattle, sheep); ch. ts. Hawick, Kelso, Berwick-on-Tweed (Eng.); a. approx. 220 sq. m.
Mersea, *I.*, at mouth of R. Colne, Essex, Eng.; oysters; holiday resort; length 5 m., width 2 m.
Merseburg, *c.*, Saxony, Germany; on R. Saale; cath., cas.; paper, machin., tobacco, chemicals; p. (estd. 1954) *34,500.*
Mersey, *R.*, between Lancs and Cheshire, Eng.; enters Irish Sea by fine estuary at Liverpool; length 68 m.
Merseyside, *lge. conurbation*, S.W. Lancs and N. Cheshire, Eng.; comprises: (1) spt. and industl. a. either side of lower Mersey estuary; (2) residtl. a. of W. Wirral Peninsula; a. 150 sq. m.; p. (1951) *1,382,244. See also under* **Bebington, Birkenhead, Bootle, Crosby, Ellesmere Pt., Hoylake, Huyton, Litherland, Liverpool, Neston, Wallasey, Wirral.**
Mersey Tunnel, biggest underwater tunnel in world, linking Liverpool and Birkenhead; opened 1934; main tunnel 2 m. l., with branch bores, 3 m.
Mersin, *spt.*, Turkey; textiles, fruit, cereals, timber; p. (1945) *33,086.*
Merthyr Tydfil, *t.*, *co. bor.*, Glamorgan, S. Wales; in narrow valley of R. Taff, 22 m. N.W. of Cardiff; hosiery, elec. goods, aircraft, bricks; p. (1951) *61,093.*
Merton and Morden, *urb. dist.*, Surrey, Eng.; residtl.; light inds.; p. (1951) *74,602.*
Meru, *mtn.*, Tanganyika Terr., Brit. E. Africa; extinct volcano overlooking E. arm of Gr. Rift valley; coffee plantations at alt. 5,000–6,000 ft., some rubber below 4,000 ft.; alt. summit 14,953 ft.
Merv, *see* **Mary.**
Mesabi Range, *hills*, N.E. Minn., U.S.A.; about

100 m. long, alt. 200–500 ft.; vast iron-ore deposits.

Mesagna, *t.*, S. Italy; mnfs.; p. *17,300*.

Meshed, *c.*, Khurasan, Persia; nr. Kashaf Rud R.; tr., pilgrim ctr.; silks, carpets; p. (1956) *242,165*.

Mesopotamia, *see* **Iraq**.

Messina, *c.*, *spt.*, Sicily, Italy; opposite Reggio; univ.; exp. fruit, wine, silk, oil; silk mnf.; p. (1951) *218,906*.

Messina, *strait*, between Sicily and Italian mainland; length 22 m. minimum width 3 m.

Messinia, *prefecture*, Peloponnese, Greece; cap. Kalamai; p. (1951) *227,648*.

Mesta, *R.*, Bulgaria, Greece; rises in Rhodope Mtns., flows S.E. into Ægean Sea 15 m. E. of Kavàlla; valley famous for tobacco; known in Greece as NESTOS; approx. length 175 m.

Mestre, *t.*, Italy; on lagoon at landward end of causeway linking Venice to mainland; p. *11,750*.

Mesurado, *R.*, Liberia, Africa; 300 m. long.

Meta, *R.*, Colombia and Venezuela; navigable for 400 m.; trib. of R. Orinoco; length 750 m.

Metaline, *t.*, Wash., U.S.A.; on R. Colombia nr. Canada–U.S.A. bdy.; lead–zinc mines.

Metemma, *t.*, Sudan; opposite Shendi, on R. Nile.

Methil, *t.*, Fife, Scot.; on F. of Forth; united with Buckhaven.

Methuen, *t.*, Mass., U.S.A.; textiles, footwear; p. (1950) *24,477*.

Metkovic, *t.*, Yugoslavia; on R. Narenta; mkt.; p. (1947) *5,723*.

Metropolis, *c.*, Ill., U.S.A.; on R. Ohio; p. (1950) *6,093*.

Mettmann, *t.*, N. Rhine–Westphalia, Germany; nr. Düsseldorf; iron, machin.; p. (estd. 1954) *19,300*.

Metuchen, *bor.*, N.J., U.S.A.; residtl., chemicals, needles, rubber; p. (1950) *9,879*.

Metz, *c.*, cap. Moselle, France; on R. Moselle 25 m. N. of Nancy; cath.; wines, leather goods, preserved fruits; p. (1954) *85,701*.

Meudon, *t.*, Seine-et-Oise, France; nr. Versailles; observatory; glass, linen, ammunition; p. (1954) *24,729*.

Meurthe, *R.*, France; length 70 m.

Meurthe-et-Moselle, *dep.*, E. France; agr., vineyards, mining; cap. Nancy; a. 2,037 sq. m.; p. (1954) *607,022*.

Meuse, *dep.*, N.E. France; livestock, mining, wine; cap. Bar-le-Duc; a. 2,408 sq. m.; p. (1954) *207,106*.

Meuse (**Maas**,) *R.*, France; rises in Haute-Marne, flows past Verdun into Belgium past Namur and Liége into the Netherlands and joins the Waal, left arm of the Rhine; length 570 m.

Mevagissey, *vil.*, Cornwall, Eng.; fishing and fish canning; tourist resort; p. *1,739*.

Mexborough, *t.*, *urb. dist.*, W.R. Yorks, Eng.; on R. Don, 10 m. above Doncaster; potteries, iron; p. (1951) *18,965*.

Mexcala, *R.*, S. Mexico; flows into Pacific; length 500 m.

Mexia, *t.*, Texas, U.S.A.; rly. ctr.; cotton, oil, engin.; p. (1950) *6,627*.

Mexicali, *cap.*, N. Terr., Lower California, Mexico; p. (1950) *141,189*.

Mexico, *fed. rep.*, S. of N. America; contains much forest, fertile land and mtn. dists.; rich in minerals, silver, copper, arsenic, oil, zinc, lead; stock-raising and agr. are the ch. occupations in the N. States; cap. Mexico City; a. 763,944 sq. m.; p. (1950) *25,791,017*.

Mexico City, *cap. c.*, Mexico; in plain, alt. 7,460 ft. above sea-level; fine Houses of Congress, many lge. public buildings, extensive tr. and inds.; p. (1953) *3,795,567*.

México, *st.*, Mexico; a. 8,267 sq. m.; cap. Toluca; p. (1950) *1,389,892*.

Mexico, *c.*, Mo., U.S.A.; firebrick and shoe factories; p. (1950) *11,623*.

Mexico, G. of, *lge. inlet* of the Atlantic (1,000 m. E. to W. by 800 m. N. to S.) lying S. of U.S.A. and E. of Mexico. Communicates by Florida Strait with the Atlantic and by Channel of Yucatán with the Caribbean Sea.

Meycauayan, *mun.*, Luzon, Philippines; rice, sugar, maize; p. *16,082*.

Mézières, *t.*, Ardennes, France; on R. Meuse; nails, hardware, type-founding; p. (1954) *11,073*.

Mezökovesd, *t.*, Hungary; industl.; p. *20,838*.

Mezötur, *t.*, Hungary; mkt., flour, pottery; p. *25,835*.

Mhow, *t.*, Madhya Pradesh, India; cotton; p. (1941) *31,177*.

Miagao, *t.*, Panay, Philippines; tr. ctr., mnfs.

Miami, *t.*, Fla., U.S.A.; winter resort, fruits, fishing; p. (1957) *261,000*.

Miami, *t.*, Okla., U.S.A.; tr. ctr., agr., cattle; packing, mining; p. (1950) *11,801*.

Miamisburg, *t.*, Ohio, U.S.A.; p. (1950) *6,329*.

Miani, *t.*, N.W. Punjab, Pakistan; salt; p. about *6,000*.

Mianwali, *dist.*, W. Punjab, Pakistan; p. (estd. 1951) *550,000*.

Michigan, *st.*, U.S.A.; in valley of Gr. Lakes; industl.; cars, iron and steel goods, petroleum, minerals; some agr.; cap. Lansing; a. 58,216 sq. m.; p. (1950) *6,371,766*.

Michigan, *L.*, N. America; in basin of St. Lawrence R., enclosed by two peninsulas of the St. of M. and by Wis., Ill. and Ind.; a. 23,900 sq. m.; discharges by Straits of Mackinac to L. Huron.

Michigan City, *t.*, Ind., U.S.A.; on L. M.; rly. wks., furniture, hosiery; p. (1950) *28,395*.

Michipicoten, *R.*, Ontario, Canada; flows 125 m. to L. Superior.

Michoacan, *st.*, Mexico; on the Pacific; mtnous. and rich in minerals; cap. Morelia; a. 23,200 sq. m.; p. (1950) *1,416,681*.

Michurinsk, *t.*, R.S.F.S.R.; N.W. of Tambov; p. (1959) *80,000*.

Micronesia, *grs. of sm. Is.*, S. Pacific; includes Carolines, Marianas (Ladrones), Marshall, Pelews, etc.

Middelburg, *t.*, cap. Zeeland, Neth.; on Walcheren I. nr. Flushing; margarine, timber; p. (1951) *21,417*.

Middelburg, *t.*, Transvaal, S. Africa; coal, iron, copper, cobalt; p. *7,995*.

Mississippi, *R.*, Canada; trib. of Ottawa R.; length 100 m.
Mississippi, *R.*, U.S.A.; total length 2,547 m., navigable for 2,000 m.
Missolonghi, *c.*, *spt.*, *cap.*, Aetolia and Acarnania, Greece; currants; p. (1951) *13,837*.
Missoula, *c.*, Mont., U.S.A.; on Klark R.; univ.; rly. wks., agr., fruit, oil ref.; p. (1950) *22,485*.
Missouri, *st.*, U.S.A.; livestock, maize, coal,

iron; cap. Jefferson City; ch. t. St. Louis; a. 69,674 sq. m.; p. (1950) *3,954,653*.
Missouri, *R.*, U.S.A.; trib. of Mississippi R.; length (including the Madison) *3,047* m., navigable 2,400 m.
Missouri Coteau, *hill ridge*, N. America; runs N.W. to S.E. across prairies of Saskatchewan (Canada), N. and S. Dakota (U.S.A.); rises abruptly from 1,600 to 2,000 ft.
Missouri, Little, *R.*, U.S.A.; trib. of M. R.; length 450 m.
Mistassini, *L.*, Quebec, Canada; 100 m. long.
Misterbianco, *commune*, E. Sicily; lava, sulphur; agr.; p. *11,387*.
Mistretta, *t.*, Sicily, Italy; mnfs.; p. *10,800*.
Misurata, *t.*, Tripolitania, Libya, N. Africa; on cst. of Mediterranean, 110 m. E. of Tripoli; mkt. for local agr. produce; fishing; p. (1938) *45,097*.
Mitau, *see* **Jelgava**.
Mitcham, *mun. bor.*, Surrey, Eng.; nr. Croydon; paint, calico printing, elec. engin.; p. (1951) *67,273*.
Mitchell, *dist.*, N.S.W., Australia; silver mining.
Mitchell, *R.*, Queensland, Australia; flows into G. of Carpentaria.
Mitchell, *t.*, Ind., U.S.A.; cement; p. (1950) *3,245*.
Mitchell, *dist.*, Queensland, Australia; p. *1,358*.
Mitchell, *t.*, S. Dakota, U.S.A.; univ.; farming; p. (1950) *12,123*.
Mitchell, *mtn. pk.*, Black Mtns., N. Carolina, U.S.A.; alt. 6,684 ft.; also called the "Black Dome."
Mitchelstown, *t.*, Cork, Ireland; nr. Fermoy; p. (1951) *2,148*.
Mitidja, *plain*, Algeria, N. Africa; borders Mediterranean 25 m. E. and W. of Algiers; intensive cultivation of vine; ch. ts. Algiers, Blida.
Mitrovica, *t.*, Jugoslavia; on R. Sava; livestock, mkt.; p. *12,000*.
Mittelland Canal, *inland waterway system*, N. Germany; system of canals and canalised Rs.; links Dortmund–Ems Canal nr. Rheine through Minden, Hanover, Magdeburg, Berlin to R. Oder at Frankfurt-on-Oder; makes use of natural E.–W. troughs across the N. German Plain.
Mittweida, *t.*, Saxony, Germany; metallurgy, textiles; p. (estd. 1954) *24,500*.
Mitzensk, *t.*, U.S.S.R.; on R. Zusha; mnfs.; p. *19,120*.
Miyako, *spt.*, Japan; p. *32,879*.
Mizen Head, *C.*, S. Ireland; W. of C. Clear.
Mjösa, *lgst. L.*, Norway; 55 m. long.
Mlada Boleslav (**Jungbunzlau**), *t.*, Bohemia, Czechoslovakia; religious ctr., chemicals; p. *19,604*.
Mlawa, *t.*, Warsaw, Poland; tanning, grain, agr. implements; p. *14,000*.
Mljet, *I.*, Adriatic Sea; part of Jugoslavia.
Moate, *t.*, W. Meath Ireland; p. (1951) *1,274*.
Moberly, *c.*, Mo., U.S.A.; rly. wks., grain, iron, hosiery, footwear; p. (1950) *13,115*.
Mobile, *c.*, *spt.*, Ala., U.S.A.; on R. M.; shipbldg., cotton exp.; p. (1950) *129,009*.
Mocha, *fortfd. spt.*, Yemen, Arabia; on Red Sea; coffee; p. *5,000*.
Modane, *t.*, S.E. Savoie, France; commands routes via Mont Cenis Pass and tunnel; p. (1954) *4,064*.
Modder, *R.*, C. Prov., S. Africa; trib. of Orange R.
Modena, *t.*, *prov. cap.*, Italy; cath. univ.; textiles, fruit, grain, leather; p. (1951) *111,094*.
Modesto, *t.*, Cal., U.S.A.; fruit, vegetables; p. (1950) *17,389*.
Modica, *t.*, Sicily, Italy; cheese, macaroni, grain, wines; p. (1948) *43,500*.
Modjokerto, *t.*, E. Java, Indonesia; sugar; fossil man discovered 1934; p. *23,600*.
Mödling, *t.*, Austria; on R. Brühl, metalwks., sulphur-baths; p. *19,000*.
Moers, *t.*, N. Rhine–Westphalia, Germany; N.E. of Krefeld; cas.; coal-mining, metal ind.; p. (estd. 1954) *36,300*.
Moffat, *burgh*, Dumfries, Scot.; in Annandale, 15 m. N.W. of Lockerbie; health resort; p. (1951) *2,623*.
Moffat Tunnel, Col., U.S.A.; carries trunk rly. from Chicago to San Francisco under Rocky Mtns. between Denver and Salt Lake City; length 6¼ m.
Mogadishu, *cap.*, former Italian Somaliland protectorate, N.E. Africa; p. (estd. 1948) *74,000*.
Mogador, *spt.*, Morocco, N. Africa; cereals, almonds, gum-arabic; p. (1946) *28,620*.
Mogilev, *c.*, Byelorussian S.S.R.; on R. Dnieper; engin., textiles; p. (1959) *121,000*.
Mogilev Podolski, *t.*, Ukrainian S.S.R.; on Dniester R.; tr., flour, sugar refining; p. (1939) *22,271*.
Mogi Mirim, *t.*, Brazil; tr. ctr.; p. *8,449*.
Mohác, *t.*, Hungary; on R. Danube; R. pt.; flour, brewing; p. *17,228*.
Mohawk, *R.*, N.Y., U.S.A.; trib. of Hudson R.; followed by impt. road, rly. and canal routes across Appalachian Mtns.; length 175 m.
Moidart, *L.*, *cst. dist.*, S.W. Inverness, Scot.
Moisie, *R.*, Labrador, Canada, flows S. into G. of St. Lawrence.
Moissac, *t.*, France; on R. Tarn; abbey; p. *7,435*.
Mojave, *desert*, Cal., U.S.A.
Moji, *spt.*, Kyushu, Japan; exp. coal, cement, timber, sugar, cotton, thread; p. (1950) *124,399*.
Mokau, *R.*, S.I., N.Z.
Mokpo, *spt.*, W. cst. S. Korea; ctr. of food-processing and cotton-ginning; p. (1949) *111,128*.
Mola di Bari, *spt.*, Apulia, Italy; grain, livestock, olives, wine; p. *18,775*.
Mola di Gaeta, *t.*, Italy; p. *15,950*.
Mold, *co. t.*, *urb. dist.*, Flint, N. Wales; on R. Alyn; chemicals, roadstone; p. (1951) *6,436*.
Moldau, *see* **Vltava**.
Moldavian S.S.R., *const. rep.*, U.S.S.R.; viniculture, fruit-growing, mkt. gard.; cap. Kishinev; a. 13,200 sq. m.; p. (1959) *2,880,000*.
Moldavia, *prov.* Romania; a. 14,660 sq. m.; wine; ch. t. Iasi; p. *2,850,068*.
Molde, *spt.*, Romsdals Fjord, Norway; p. *1,820*.
Mole, *R.*, Surrey, Eng.; rises in central Weald, flows N. into R. Thames nr. Molesey; cuts impt. gap through N. Downs between Dorking and Leatherhead; length approx. 50 m.
Molenbeek-Saint-Jean, *t.*, Belgium; nr. Brussels; large mftg. ctr.; p. (1947) *65,000*.
Molesey, E. and W. *t.*, Surrey, Eng.; at junction of Rs. Mole and Thames; residtl.; p. *8,500*.
Molfetta, *spt.*, Apulia, Italy; olive oil, macaroni, wine; p. (1948) *53,493*.
Molina de Segura, *commune*, S.E. Spain; paper mftg.; p. *13,721*.
Moline, *c.*, Ill., U.S.A.; on Mississippi R.; agr. implements, ironwks., flour; p. (1950) *37,397*.
Mollendo, *spt.*, Peru; copper; p. (1947) *14,893*.
Mölndal, *c.*, S.W. Sweden; paper, textiles; margarine; p. (1951) *20,857*.
Molokai, *I.*, Hawaiian Is.; a. 260 sq. m.; p. *5,258*.
Molotov (renamed **Perm**, 1957), *t.*, R.S.F.S.R.; on R. Kama, N.W. of Sverdlovsk; hydro-elec., oil, textiles, engin., chemicals, copper; p. (1959) *628,000*.
Molsheim, *t.*, Bas-Rhin, France; W. of Strasbourg; sword and bayonet mkg.
Molucca or Spice Is., Indonesia; between Celebes and New Guinea; spices, sago, timber, pearls, rice, copra; a. 191,681 sq. m.; p. (1930) *893,400*.
Mombasa, *spt.*, Kenya; ch. harbour, Killindini; rly. terminus; exp. tropical produce (ivory, hides, rubber, etc.); p. *102,000*.
Mön, *I.*, off cst. of Zealand, Denmark; a. 90 sq. m.; cap. Stege; p. *14,000*.
Mona Passage, *strait*, Caribbean Sea; separates Hispaniola from Puerto Rico.
Monaca, *bor.*, Penns., U.S.A.; glass, light engin.; p. (1950) *7,415*.
Monaco, *principality*, S. France; divided into 3 sections, Monaco Ville, La Condamine, and Monte Carlo (famous Casino); tourist resort, olive oil, perfumes; a. 8 sq. m.; p. (1956) *20,422*.
Monadhliath Mtns., Inverness, Scot.; on W. side Strathspey; highest peak Carn Mairg, 3,087 ft.
Monaghan, *inland co.*, Ireland; mainly pastoral and agr.; a. 500 sq. m.; p. (1956) *52,013*.
Monaghan, *co. t.*, Monaghan, Ireland; on the Ulster Canal; cath.; p. (1951) *4,723*.
Monaro, *mtn. plateau*, N.S.W., Australia; a. 8,335 sq. m.
Monastir, *see* **Bitolj**.
Moncaleiri, *commune*, Piedmont, N.W. Italy; on R. Po; industl.; p. *21,181*.
Mönch or "**The Monk**", *mtn.*, Bernese Alps, Switzerland; alt. 13,468 ft.
Mönchen-Gladbach, *t.*, *Land*, North Rhine-Westphalia, Germany; 16 m. W. of Düsseldorf; rly. ctr., gen. indus.; p. (estd.) *110,600*.
Monchique, *t.*, Algeria, Portugal; spa; wine, oil, chestnuts; p. *10,000*.

Monclova, *t.*, N.E. Mexico; coffee; copper, silver, zinc, lead-mines; p. (1941) *7,181*.
Moncton, *t.*, N.B., Canada; rly. ctr., textiles; oil near by; p. (1956) *36,003*.
Mondego, *R.*, Portugal; length 130 m.
Mondoñedo, *t.*, Galicia, Spain; cath.; p. *10,750*.
Mondovi, *t.*, Cuneo, Italy; porcelain, paper, silk; p. *20,900*.
Monessen, *t.*, Penns., U.S.A.; steel, tinplate, wire; p. (1950) *17,896*.
Monfalcone, *commune*, N.E. Italy; chemicals, shipbldg., cotton mills; p. (1948) *19,634*

Morelia, *c.*, *cap.*, Michostán, Mexico; cath.; textiles, sugar; p. (1950) *103,516*.
Morelos, *inland st.*, Mexico; mtns., forested; cap. Cuernavaca; a. 1,916 sq. m.; p. (1950) *272,803*.
Möre Og Romsdal, *dist.*, Norway; a. 5,812 sq. m.; p. (1950) *191,438*.
Moret-sur-Loing (Moret les Sablons), *t.*, 40 m. S. of Paris on picturesque R. Loing.
Morez, *t.*, S.E. Jura, France; precision instruments, optical equipment, winter sports; p. (1946) *5,020*.
Morgan, *t.*, *R. pt.*, S. Australia; on R. Murray, where it suddenly turns S. approx. 150 m. from its mouth; handles transhipment of Murray and Darling R. traffic to rail for despatch to Adelaide.
Morgantown, *t.*, W. Va., U.S.A.; coal, oil, gas fields; chemicals, heavy ind.; p. (1950) *25,525*.
Morioka, *c.*, N. Honshu, Japan; textiles, ironwks.; p. (1950) *117,578*.
Morlaix, *spt.*, Finistère, France; tobacco, paper, brewing, agr.; p. (1954) *15,037*.
Morley, *t.*, *mun. bor.*, W.R. Yorks, Eng.; 3 m. S.W. of Leeds; woollens, coal-mining, stone quarrying, tanning; p. (1951) *39,783*.
Morocco, *independent kingdom*, N.W. Africa; cap. Rabat; other chief ts. Casablanca, Marrakesh, Tangier (an integral part of the kingdom of Morocco) Fez, Meknès, Tetuan, Oujda, Safi, Port-Lyautey; agr., forest, and animal prod.; fruits; minerals, incl. phosphates, manganese, iron ore, lead and zinc; coal, petroleum; a. 180,000 sq. m., p. (estd. 1955) *10,000,000*.
Morogoro, *t.*, Tanganyika Terr., Brit. E. Africa; on E. edge of Central African plateau, alt. approx. 3,000 ft., 110 m. by rail W. of Dar-es-Salaam; ctr. of sisal- and cotton-growing a.
Morón de la Frontera, *commune*, S.W. Spain; old church; olives; iron ore; marble; p. *26,575*.
Morotai I., N. of Molucca, Indonesia.
Morpeth, *mun. bor.*, Northumberland, Eng.; nr. Newcastle; coal-mining, iron; p. (1951) *10,797*.
Morrinsville, *t.*, N.I. N.Z.; agr. ctr.; p. (1951) *2,820*.
Morriston, *vil.*, Glamorgan, S. Wales; on R. Tawe, 2 m. N.E. of Swansea; zinc smelting and refining steel.
Morristown, *t.*, N.J., U.S.A.; holiday ctr., fruit; p. (1950) *17,124*.
Morrisville, *bor.*, Penns., U.S.A.; on Delaware R.; rubber prod.; p. (1950) *6,787*.
Morro Velho, *mining dist.*, Minas Geraes, Brazil; in Serra do Espinhaço, 10 m. S. of Belo Horizonte; deep but rich gold-mines; ch. t. Nova Lima.
Mors, *I.*, N. Jutland, Denmark; a. 138 sq. m.; p. *26,186*.
Mortlake, *t.*, Surrey, Eng.; on R. Thames; residtl. sub. of London; cement, pottery.
Morven, *mtn.*, Aberdeen, Scot.; nr. Ballater; alt. 2,862 ft.
Morven, *mtn.*, Caithness, Scot.; nr. Berriedale; alt. 2,313 ft.
Moscow, *c.*, R.S.F.S.R.; *cap.*, U.S.S.R.; on R. Moskva; caths., univ., Kremlin, palaces; comm. ctr.; textiles, steel, engin., oil refining, chemicals; p. (estd. 1959) *5,032,000*.
Moscow Sea (Ucha Reservoir), *artificial L.*, R.S.F.S.R.; created behind dam on R. Volga at Ivankovo; supplies water to Moscow, maintains level on Moscow–Volga Canal, and supplies water to 8 hydro-elec. power-stas.; a. 127 sq. m.
Moscow–Volga Canal, R.S.F.S.R.; links R. Volga at Ivankovo with Khimki suburb of Moscow; forms part of Leningrad–Moscow inland waterway; opened 1937; length 80 m.
Moselle, *dep.*, N.E. France; cap. Metz; a. 2,403 sq. m.; p. (1954) *769,388*.
Moselle, *R.*, France and Germany; trib. of R. Rhine; length 328 m.; canalisation in progress (1957) between Thionville and Coblenz (168 m.).
Moshi, *t.*, Tanganyika Terr., Brit. E. Africa; on S.E. flank of Mt. Kilimanjaro; ctr. of coffee-growing dist. at alt. approx. 5,500 ft.; despatches coffee by rail to Tanga or Mombasa.
Moskva, *R.*, U.S.S.R.; trib. of R. Oka; length 249 m.
Moss, *spt.*, Norway; shipbldg., timber; p. (1946) *17,008*.
Mossamedes, *spt.*, Angola, Africa; exp. rubber; fishing, fertilisers; p. *8,977*.
Mossel Bay, *spt.*, C. Prov., S. Africa; oysters, whaling; p. *10,000*.
Mossend, *t.*, Lanark, Scot.; nr. Glasgow; iron and steel; p. *6,000*.
Mossgiel, *t.*, S.I., N.Z.; woollens; p. (1951) *3,133*.
Mossley, *mun. bor.*, Lancs, Eng.; 3 m. E. of Oldham; mkt. t., textiles, iron and steel; p. (1951) *10,415*.
Most, *t.*, Czechoslovakia; lignite, chemicals; p. (1957) *35,770*.
Mostaganem, *t.*, Algeria; vineyards, flour, leather; p. (1948) *53,464*.
Mostar, *t.*, Herzegovina, Jugoslavia; on R. Naretva; bauxite, lignite, aluminium plant; p. (1953) *31,680*.
Mosul, *t.*, Iraq; on R. Tigris; comm. ctr., impt. during crusades; agr. prod., livestock; p. (1956) *140,295*.
Motala, *t.*, on L. Vattern, Sweden; p. (1951) *24,723*

Motherwell and Wishaw, *burgh*, Lanark, Scot.: in Clyde valley, 15 m. S.E. of Glasgow; coal, iron, steel, machin., engin., silk, nylon; p. (1951) *68,137*.
Motovilikha, *c.*, W. U.S.S.R.; industl., sub. of Perm.; motors; p. (1939) *33,110*.
Motril, *spt.*, Spain; minerals, cotton, sugar, fruits; p. *18,000*.
Mottarone, Monte, *mtn.*, Italy, between L. Maggiore and L. Orta; alt. 4,892 ft.
Motueka, *t.*, S.I., N.Z.; fruit, tobacco; p. (1951) *2,469*.
Moulins, *t.*, cap. Allier, France; on R. Allier; cath., ruined château; timber wks., brewing; p. (1954) *24,437*.
Moulmein, *spt.*, Burma on R. Salween; rice, timber; p. (1955) *101,720*.
Moundsville, *c.*, W. Va., U.S.A.; on Ohio R.; coal, glass, zinc; p. (1950) *14,772*.
Mount Adams, *peak*, White Mtns., N.H., U.S.A.; alt. 5,679 ft.
Mount Carmel, *bor.*, Penns., U.S.A.; on Wabash R.; coal-mining, clothing mftg.; p. (1950) *14,222*.
Mount Clemens, *t.*, Mich., U.S.A.; on Clinton R.; mineral springs; p. (1950) *17,027*.
Mount Desert, *I.*, Me., U.S.A.; a. 100 sq. m.; mtns.; summer resort.
Mount Gambier, *t.*, S. Australia; pastoral, agr. ctr.; p. (1947) *6,787*.
Mount Holly, *t.*, N.J., U.S.A.; textiles, clothes, leather; p. (1950) *8,206*.
Mount Isa, *t.*, W. Queensland, Australia; in Selwyn Range 80 m. W. of Cloncurry, linked by rly. through Cloncurry to E. cst. at Townsville; silver–lead mines; p. (1957) *8,140*.
Mount Lofty Range, *mtn. range*, S. Australia; lies immediately E. of Adelaide approx. 5 m. from St. Vincent G.; forms barrier to routes leaving Adelaide N.E. and E.; lower slopes support vineyards and outer suburbs of Adelaide; rises to over 3,000 ft.
Mount Morgan, *t.*, Queensland, Australia; gold-mining; p. (1947) *3,799*.
Mount Morris, *t.*, N.Y., U.S.A.; p. (1950) *3,450*.
Mount Pleasant, *t.*, Mich., U.S.A.; oil, lumber, sugar-beet, dairy prod.; p. (1950) *11,393*.
Mount Vernon, *c.*, Ill., U.S.A.; timber, flour, woollens, coal; p. (1950) *15,600*.
Mount Vernon, *c.*, Ind., U.S.A.; on Ohio R.; rly. ctr.; p. (1950) *6,150*.
Mount Vernon, *c.*, N.Y., U.S.A., on Bronx R.; sub. of N.Y.; residtl.; p. (1950) *71,899*. Takes its name from George Washington's house on the Potomac, in Virginia, 15 m. S. of Washington, D.C.
Mount Vernon, *c.*, Ohio, U.S.A.; on Kokosing R.; timber goods, mnfs.; p. (1950) *12,185*.
Mountain Ash, *urb. dist.*, Glamorgan, Wales; in narrow valley 3 m. S.E. of Aberdare; coal; p. (1951) *31,528*.
Mountain Province, *prov.*, N. Luzon, Philippines; rice, metal working; a. 5,458 sq. m.; p. *296,874*.
Mountmellick, *t.*, Laoighis, Ireland; mkt., tanning, malting; p. (1951) *2,501*.
Mount's Bay, *inlet*, S. cst. Cornwall, Eng.; 20 m. wide; fishery grounds.
Mourne Mtns., Down, N. Ireland; highest peak, 2,796 ft.
Mouscron, *t.*, Belgium; cotton- and wool-weaving; p. (estd. 1957) *36,562*.
Mouse or Souris, *R.* Canada and U.S.A.; trib. of Assiniboine R.; length 500 m.
Moy, *R.*, Mayo and Sligo, Ireland; length 35 m.
Moyeuvre-Grande, *t.*, Moselle, France; p. (1954) *10,707*.
Mozambique, *Portuguese col.*, E. Africa; sugar, oil-nuts, cotton, maize; cap. Lourenço Marques; a. 297,731 sq. m.; p. (1950) *5,732,767*.
Mozambique Channel, *strait*, Indian Ocean; separates Madagascar from mainland of Africa; length 1,000 m., width from 250 to 600 m.
Mozambique Current, *ocean current*, flows N. to S. along E. cst. of Mozambique and Natal, E. Africa; relatively warm water.
Mozdok, *t.*, R.S.F.S.R.; on Rostov–Baku rly.; oil pipe-lines; p. *14,008*.

New Hampshire, *st.*, New England, U.S.A., touching the Canadian border; forested and mountainous; agr. and fruit-growing extensively pursued; paper and forest products, textiles; cap. Concord; ch. spt. Portsmouth; principal mftg. ctr. Manchester; a. 9,304 sq. m.; p. (1950) *533,242*.
New Haven, *c.*, *pt.*, Conn., U.S.A.; on New Haven Harbour, inlet of Long I. Sound; Yale Univ.; firearms, clocks, tools, paper; meat-packing; p. (1950) *164,443*.
New Hebrides Condominium, *I.*, Pac. Oc.; roughly 500 m. W. of Fiji and 250 m. N.E. of New Caledonia; administered jointly by France and Britain; 3 active volcanoes, on Tanna, Ambrym and Lopevi; earth tremors frequent; copra, cotton, cocoa; a. 5,700 sq. m.; p. (1957) *49,304*.
New Holland, *ferry, rly. sta.*, on R. Humber, Lincoln, Eng.
New Hunstanton, *t.*, *urb. dist.*, Norfolk, Eng.; on S.E. cst. of The Wash, 15 m. N.E. of King's Lynn; resort; p. (1951) *3,414*.
New Iberia, *t.*, La., U.S.A.; sugar, cotton and rice-growing; timber tr.; p. (1950) *16,467*.
New Ireland, *I.*, Bismarck Archipelago, Papua-New Guinea; a. (with adjacent Is.) 3,800 sq. m.; p. (1957) *36,512* (native), (1954) *713* (non-indigenous).
New Jersey, *Atlantic st.*, U.S.A.; adjoining New York; mixed farming, petroleum-refining, smelting, chemicals, sanitary ware, motor vehicles, paints, shipbldg.; glass sand, zinc, iron ore, clay; cap. Trenton; ch. cs.; Newark and Jersey City; a. 7,836 sq. m.; p. (1950) *4,835,329*.
New Kensington, *t.*, Penns., U.S.A.; p. (1950) *25,146*.
New Lexington, *t.*, Ohio, U.S.A.; coal, oil and natural gas; p. (1950) *4,233*.
New London, *c.*, Conn., U.S.A.; at mouth of R. Thames; fine harbour; silk and woollen factories; p. (1950) *30,551*.
New Mexico, *st.*, U.S.A.; N. of the Mexican Rep., and S. of Colorado st.; traversed by the Rocky Mtns.; uranium, potash salts, pumice, beryllium, copper, petroleum; agr.: cereals, fruit, vegetables, cotton, livestock; cap. Santa Fé; a. 121,666 sq. m.; p. (1950) *681,187* (chiefly of Mexican descent).
New Milford, *t.*, Milford Haven, Pembroke, Wales.
New Milford, *t.*, N.W. Conn., U.S.A.; dairy prods., tobacco, foundries, textiles, chemicals; p. (1950) *2,673*.
New Mills, *industl. t.*, *urb. dist.*, Derby, Eng.; at W. foot of Pennines 6 m. S.E. of Stockport; textile printing, bleaching and dyeing, rayon, paper, emery and glass-cloth mftg., iron and brass mnfs.; p. (1951) *8,473*.
New Norfolk, *t.*, Tasmania, Australia; fruit-growing; p. (1947) *7,921*.
New Orleans, *c.*, *spt.*, La., U.S.A.; on delta of Mississippi R.; the gr. cotton mart of America, and a busy comm. and mftg. ctr.; p. (1950) *570,445*.

New Philadelphia, *c.*, Ohio, U.S.A.; impt. rly. and canal ctr.; p. (1950) *12,948*.

New Plymouth, *spt., cap.*, Taranaki, N.I., N.Z.; on W. cst. at N. foot of Mt. Egmont; ctr. of dairy-farming dist.; p. (estd. 1958) *29,600*.

New Providence, *I.*, Bahama Is., W. Indies; contains cap., Nassau; p. (1953) *46,125*.

New Quay, *t., urb. dist.*, Cardigan, Wales; on cst. of Cardigan Bay, 18 m. S.W. of Aberystwyth; p. (1951) *1,093*.

New Radnor, *rural dist., co. t.*, Radnor, Wales; on slope of Radnor Forest, 6 m. S.W. of Presteign; p. (of dist.) (1951) *2,255*.

New River, *artificial aqueduct*, Herts to Islington, London, Eng.; length 36 m.

New Rochelle, *c.*, N.Y., U.S.A.; on Long I. Sound; residtl.; p. (1950) *59,725*.

New Romney, *t., mun. bor.*, Kent, Eng.; nr. S. cst. to E. of Dungeness; one of the Cinque Ports, in the rich agr. dist. Romney Marsh; old harbour silted up by shingle, and now a mile from sea; p. (1951) *2,356*.

New Ross, *mkt. t., urb. dist.*, Wexford, Ireland; brewing and malting; p. (1951) *4,903*.

New Siberian Is., off Arctic cst., U.S.S.R.

New South Wales, *st.*, S.E. Australia; much mineral wealth in tablelands and mtns.; silver, lead, coal, zinc, iron and steel; agr., corn, potatoes, fruit-growing, sheep, wool, cattle, meat; a. 309,433 sq. m. (exclusive of Australian Capital Terr. of Canberra); p. (estd. 1958) *3,680,397*.

New Waterway (Nieuwe Waterweg), *ship canal*, S. Holland, Neth.; connects R. Lek 7 m. below Rotterdam with N. Sea cst. at Hook of Holland; length 11 m.

New Westminster, *t.*, B.C., Canada; at mouth of R. Fraser; former cap. col.; exp. timber, canned salmon; p. (estd. 1958) *31,665*.

New York, *st.*, U.S.A.; one of the original sts.; touching Canada on the N., and reaching the Atlantic on the S.; known as the "Empire State"; inc. Long I. and Staten I.; mixed agr., Portland cement, iron ore, stone, sand and gravel, zinc, petroleum, gypsum, titanium concentrate, steel; Albany is the State cap. a. 49,576 sq. m.; p. (1950) *14,830,192*.

New York, *c., spt.*, N.Y., U.S.A.; world's lgst. c. and pt.; ch. comm. ctr. of U.S.A. and W. Hemisphere; originally founded by Dutch settlers as New Amsterdam on Manhattan I.; gr. portion situated on Long I.; fine parks and bridges, skyscrapers, gd. harbour; ch. inds.; cloth textiles, printing and publishing, iron and steel work, machin., sugar-refining, meat packing; p. (1957) *7,795,471*.

New York State Barge Canal (Erie Canal), N.Y. st., U.S.A.; links Tonawanda on Niagara R. with Hudson R. via the Mohawk gap through Appalachian Mtns.; provides through water route from N.Y. to Gr. Lakes; opened as Erie Canal 1825, improved 1918; length 339 m. (with branches 525 m.), depth 12 ft.

New Zealand, *Brit. Dominion*, S. Pac. Oc.; E. of S.E. Australia and Tasmania, just over 1,200 m. from Sydney, N.S.W.; it consists of two main Is., N.I. and S.I. (a. 102,375 sq. m.), Stewart I. (670 sq. m.), Chatham Is. (372 sq. m.), Cook I. and several smaller Is.; the Is. are mountainous and contain numerous Ls., thermal springs and geysers; the scenery being varied and beautiful, and the climate generally healthy; there are active and dormant volcanoes in N.I.; cap. Wellington; principal exp.; wool, butter, frozen meat, cheese, hides, skins and pelts; p. (1959) *2,350,250*, inc. *155,546* Maoris.

Newark, *t.*, Del., U.S.A.; univ.; p. (1950) *6,731*.

Newark, *mkt. t., mun. bor.*, Notts, Eng.; on R. Trent 17 m. N.E. of Nottingham; engin., brewing, chemicals, etc.; p. (1951) *22,909*.

Newark, *c.*, N.J., U.S.A; fine flourishing mnfs., inc. chemicals, leather, jewellery; p. (1950) *438,776*.

Newark, *c.*, Ohio, U.S.A.; on R. Licking; rly. carriage wks. and other mnfs.; p. (1950) *34,275*.

Newark, *t.*, N.Y., U.S.A.; horticulture, glass, light mnfs.; p. (1950) *10,295*.

Newberry, *t.*, S.C., U.S.A.; cotton prod., dairying; lumbering; p. (1950) *7,546*.

Newbiggin-by-the-Sea, *t., urb. dist.*, on E. cst., 4 m. N. of Blyth; sm. seaside resort; coal-mining; Northumberland; Eng.; p. (1951) *9,727*.

Newbridge, *see* **Droichead Nua.**

Newburgh, *burgh*, Fife, Scot.; on S. side of Firth of Tay, 8 m. E. of Perth; p. (1951) *2,367*.

Newburgh, *c.*, N.Y., U.S.A.; on Hudson R.; clothing and machin. mftg.; p. (1950) *31,956*.

Newburn, *t., urb. dist.*, Northumberland, on R. Tyne, 3 m. W. of Newcastle; Eng.; pure graphite for nuclear reactors; p. (1951) *21,940*.

Newbury, *mkt. t., mun. bor.*, Berks, Eng.; on R. Kenney, 19 m. S.W. of Reading; malting, impt. wool mkt.; p. (1951) *17,772*.

Newburyport, *c., spt.*, Mass., U.S.A.; on Merrimac R.; boot and shoe factories, comm. and fisheries; p. (1950) *14,111*.

Newcastle, *spt., urb. dist.*, on Dundrum Bay; Down, N. Ireland; p. (1951) *3,076*.

Newcastle, *t.*, W. Natal, S. Africa; coal, iron, steel, wood, grain, hemp; p. *11,700*.

Newcastle, Greater, *c.*, N.S.W., Australia; at mouth of R. Hunter; 2nd c. of st.; gr. coal depot of S. hemisphere and leading provincial industl. ctr. of Commonwealth; iron and steel, engin., shipbldg.; p. (1958) *192,940*.

Neyland, *t., urb. dist.*, Pembroke, Wales; on Milford Haven; rly. terminus; p. (1951) *2,204*.
Nezhin, *t.*, Ukrainian S.S.R.; rly. junction on Kiev–Moscow line; p. (1954) *50,000*.
Ngami, *L.*, Bechuanaland Prot.; swamp, the remnant of a much larger L.
Ngauruhoe, *mtn.*, N.I., N.Z.; an active volcano; alt. 7,515 ft.
Niagara, *R.*, forming part of boundary between Canada and U.S.A.; flows from L. Erie to L. Ontario; has rapids and the famous falls (167 ft.); gr. hydro-elec. power-sta.; length 35 m.
Niagara Falls, *t.*, Ontario, Canada; opp. the falls; carborundum, canning; p. (1951) *22,735*.
Niagara Falls, *c.*, N.Y., U.S.A.; extending along the summit of cliff for 3 miles; paper, flour, aluminium; p. (1950) *90,872*.
Niamey, *t.*, Niger rep., W. Africa; one of the termini (the other is Zinder) of the trans-Sahara motor routes; p. *18,100*.
Nias, *I.*, W. of Sumatra, Indonesia; 95 m. long.
Niassa, *prov.*, Mozambique, Port. E. Africa; ch. t. Nampula.
Nicaragua, *rep.*, Central America; tropical forest; heavy rain in summer; uniformly hot; coffee, cocoa, sugar, bananas; gold and silver; cap. Managua; a. 57,145 sq. m.; p. (1957) *1,331,000*.
Nicastro, *mftg. t.*, Calabria, Italy; W. of the Apennines; olives, wine; p. *24,869*.
Nice, *c., spt., cap.*, Alpes Maritimes, France; on Mediterranean cst., at the foot of the Alps; beautiful climate and surroundings; joins ancient t. of Cimiez; ceded to France in 1860 by Sardinia; winter health resort; fruit and flower exp., perfume mftg.; p. (1954) *244,360*.
Nicobar Is., *see* **Andaman and Nicobar Is.**
Nicosia, *c., cap.*, Cyprus; the ancient Ledra; fortified, mosques, hand weaving; cap. of administrative dist. same name; p. (estd. 1959) *82,000*.
Nicoya, G. of, *inlet*, Costa Rica.
Nictheroy, *see* Niteroi.
Nidd, *R.*, trib. of R. Ouse, W.R. Yorks, Eng.
Nidwalden, *can.*, Switzerland; a. 106 sq. m.; p. (1950) *19,389*.
Niederhernsdorf, *t.*, S.W. Poland; formerly Germany; coal, explosives; p. *11,706*.
Niederwald, *hill*, opposite Bingen-on-the-Rhine, Germany; national monument commemorating German triumph over France 1870–71, and formation of the G. Empire.
Niederwesel or **Neizel**, *t.*, Germany; below Düsseldorf, on R. Rhine.
Niemen or **Memel**, *R.*, Poland and U.S.S.R.; flowing to the Kurisches Haff; length 500 m.
Nienburg, *t.*, Lower Saxony, Germany; on R. Weser; glass, metal, wood, chemicals; p. (estd. 1954) *21,900*.
Nieuwveld Range, *mtns.*, C. of Gd. Hope, Union of S. Africa; part of S. terminal escarpment of African tableland; overlooks Gr. Karroo to its S.; forms impenetrable barrier to routes; mainly over 5,000 ft., max. alt. 6,276 ft.
Nièvre, *central dep.*, France; traversed by Morvan Mtns.; forests, livestock, coal, iron, steel; cap. Nevers; a. 2,659 sq. m.; p. (1954) *240,078*.
Nigde, *t.*, Turkey; p. *11,855*.
Niger, *gr. R.*, W. Africa; rises nr. the sea in the outer mtn. zone of W. Africa, as the R. Tembi, and sweeps round by Timbuktu to a delta in the G. of Guinea, on a circuitous course of 2,600 m., receiving its gr. trib. the R. Benue, about 250 m. from the mouth; navigable for 1,000 m.
Niger, *aut. rep.* within Fr. Community, W. Africa; millet, groundnuts, rice; sheep, goats; a. 499,410 sq. m.; p. (1948) *2,010,761*.
Nigeria, Federation of, West Africa, sovereign and independent st. within British Commonwealth (1 Oct. 1960); occupying lower basin of R. Niger, with region adj. up to Lake Chad; territorial divs. are Northern (excl. N. Cameroons pending plebiscite), Eastern, Western Regions, the Southern Cameroons and fed. cap. of Lagos; Kaduna, cap. of N. provs., Ibadan of W. provs., and Enugu of E. provs.; ch. prod.: groundnuts, cotton, hides and skins, timber, palm-oil, cocoa; total a. 339,169 sq. m.; p. (estd. 1958) *33,000,000*.
Nightingale, *I.*, most S. of Tristan da Cunha gr., S. Atlantic.
Niigata, *c., port*, Honshu, Japan; coal, petroleum, lacquer ware; p. (1950) *220,901*.
Niihama, *c.*, N. Shikoku, Japan; on cst. of Inland Sea 20 m. S.E. of Imabari; refines copper obtained from Besshi Mines 12 m. to the S.; p. (1947) *42,392*.
Niitakayama, *mtn.*, Formosa I., China; highest mtn. of Niitaka Chain, central Formosa; alt. 12,939 ft.
Nijar, *t.*, Almeria, Spain; fruit, nuts, grain; textiles, porcelain; lead, manganese, iron ore; p. *10,107*.
Nijmegen, *fortfd. t.*, E. Neth.; on R. Waal, nr. Arnhem; univ.; mnfs. ale, Prussian blue, cigars, pottery, metal-work; p. (estd. 1955) *118,000*.
Nijni-Novgorod, *see* **Gorki**.
Nikaria, *I.*, Dodecanese Archipelago, Greece.
Nikko, *t.*, Honshu, Japan; famous temples and shrines; beautiful tourist resort; p. *8,000*.
Nikolayev, *fortfd. t.*, Ukrainian S.S.R.; nr. Kherson, at head of estuary R. Bug; 2nd lgst. shipbldg. ctr. in U.S.S.R.; engin., petroleum refining; p. (1959) *224,000*.
Nikolayevsk, *t., pt.*, R.S.F.S.R.; on R. Amur; iron ore, engin., oil refining; p. (1954) *50,000*.
Nikopol, *t.*, Ukrainian S.S.R.; on R. Dnieper; manganese prod.; engin., steel; p. (1959) *81,000*.
Nikšic, *t.*, Montenegro, Jugoslavia; N. of Cetinje; p. *6,686*.
Nile, *the longest R.* in Africa (*see* **White Nile** (Bahr-el-Abiad) and **Blue Nile** (Bahr-el-Azrek) flows through a longer stretch of basin (over 2,450 m. in a direct line) than any other R. in the world, and along all its windings measures over 4,000 m.; on Upper Nile navigation is hindered by sudd (floating vegetation); R. rises April, overflows Sept.; formerly cultivation entirely dependent on annual floods, but now assisted by dams, at Asyût, Aswan, Sennar, for regulating flow and navigation.
Niles, *t.*, Ohio, U.S.A.; p. (1950) *16,773*.
Nilgiri Hills, Madras, S. India.
Nimach, *t.*, Gwalior dist., Rajasthan, India; p. *10,000*.
Nîmes, *t.*, Gard, France; Roman antiquities, educational institutions; silk, cottons, carpets, machin., wine tr.; p. (1954) *89,130*.
Nineveh, *celebrated ancient c.*, Iraq, stood on the E. bank of the upper R. Tigris, opposite the modern Mosul.
Ningan, *t.*, E. Manchuria; mkt., tobacco, millet, maize; p. *30,000*.
Ningpo, *c., spt.*, Chekiang, China; 100 m. from Shanghai; wood carving, fishing, lace, hardware; principal exp.; cotton, tea; p. (estd. 1942) *249,633*.
Ningsia, former *prov.*, China; now included in Kansu prov.
Ninh Binh, *t.*, Tongking, Viet-Nam, Indo-China; *p. 25,000*.
Ninove, *t.*, Belgium; on R. Dender; industl.; p. (1947) *11,557*.
Niobrara, *R.*, U.S.A.; trib. of Missouri R.; flows from Wyoming to Nebraska; length 450 m.
Niort, *t.*, Deux-Sèvres, France; noted for its mkt. gardens, and leather mnf. (gloves); p. (1954) *33,167*.

Nipigon, *L.*, in Thunder Bay dist., Ontario, Canada; 70 m. long, 50 m. wide, 1,000 Is.; discharges by N. R. to Lake Superior; 30 m.

Nipissing, *L.*, Ontario, Canada; 50 m. long, 35 m. wide.

Niriz, *t.*, Fars prov., S.W. Persia; on old caravan route from Kerman to Shiraz; p. *9,000*

Niš, *t.*, Jugoslavia; on R. Nishava; p. (1953) *60,704*.

Nisa R., *see* Neisse R.

Nišava, *R.*, Jugoslavia; rises in Stara Planina, flows N.W. into R. Morava nr. Nis; valley used by trunk rly. from Belgrade to Sofia and Istanbul (Constantinople); length over 100 m.

Niscenic, *commune*, Caltanissetta prov., Sicily; sulphur, agr.; p. *20,281*.

Nishapur, *prov.*, N. Khurasan, Persia; grows grain, cotton; and contains famous turquoise mines; cap. N., c. with good fruit tr.; mosque with tombs of Omar Khayyám.

Niterói, *t.*, *cap.*, Rio de Janeiro st., Brazil; soap, textiles; p. (1950) *190,147*.

Nith, *R.*, S.W. Scot.; flows to Solway Firth, S. of Dumfries; followed by main rly. from Carlisle to Kilmarnock and Glasgow; length 71 m.

Nitra (Neutra), *R.*, Czechoslovakia; trib. of R. Waag; length 100 m.

Nitra, *t.*, Czechoslovakia; on R. Nitra; p. (1947) *22,589*.

Niue or Savage I., Pac. Oc.; one of Cook Is., but under separate administration; belongs to New Zealand; ch. pt. Alofi; bananas, copra; a. 100 sq. m.; p. (est. 1958) *4,735*.

Nivelles, *t.*, Brabant, Belgium; rly. wkshps., paper; p. (1947) *11,865*.

Nivernais, *old prov.*, France, now forming Nièvre prov. and part of Cher.

Nizampatam, *t.*, *spt.*, Madras, India; formerly called Pettipollee after the neighbouring village of Pedapalle; first trg. establishment made by the British in the Madras presidency in 1611.

Nizheudinsk, *t.*, W. Irkutsk, R.S.F.S.R.; new mftg. t.; p. *10,342*.

Nizhniy Tagil, *t.*, R.S.F.S.R.; in Ural mtns.; iron ore, iron and steel, engin., chemicals; p. (1959) *338,000*.

Njole, *t.*, Congo Rep., Equatorial Africa; on R. Ogowe.

No, *L.*, Bahr-el-Ghazal prov., Sudan, N.E. Africa; vast swamp a. 350 m. S.W. of Khartoum receiving Rs. Bahr-el-Jebel and Bahr-el-Ghazal (to form White Nile); flow of water blocked by papyrus reed and floating weed (sudd); gr. loss of water by evaporation.

Noakhali, *dist.*, and *t.*, Chittagong div., Pakistan; p. (of t.) *13,063*.

Nobi Plain, S. Honshu, Japan; located at head of Ise Bay; composed of: (1) low, badly drained alluvial plain on W. under intensive rice cultivation, (2) higher, drier, terraces on E. under mulberry, vegetables, pine-woods; very dense urban and rural p.; ch. textiles and pottery mftg. a. in Japan; inc. cities Nagoya, Gifu, Yokkaichi; a. 720 sq. m.

Noblesville, *t.*, Ind., U.S.A.; agr., horse breeding; p. (1950) *6,567*.

Nocera Inferiore, *t.*, Italy; nr. Naples; the ancient Nuceria Alfaterna; p. *30,000*.

Nogent-sur-Marne, *t.*, Seine, France; S.E. sub. Paris; chemicals, knives; p. (1954) *23,581*.

Noginsk, *t.*, R.S.F.S.R.; nr. Moscow; textiles; p. (1959) *93,000*.

Noisy-le-Sec, *t.*, Seine, France; p. (1954) *22,337*.

Nola, *t.*, Italy; at foot of Vesuvius, 12 m. N.E. of Naples; was an ancient c. of Campania, noted for its vases; p. *20,253*.

Nombre-de-Dios, *t.*, Mexico; comm. ctr.

Nome, *cst. t.*, Alaska, U.S.A.; gold; p. (1950) *1,852*.

Noordoostelijke Polder, land reclaimed from Zuider Zee, Neth., 1942, not yet included in any prov.; a. 185 sq. m.; p. *2,369*.

Noordwijk, *resort*, W. cst., Neth.; p. (1950) *16,686*.

Noranda, *t.*, Quebec, Canada; 12 m N.E. of Rouyn; goldmines.

Norcia, *t.*, Italy; old walls, cath.; famous for pork and terra-cotta.

Nord, *N. dep.*, France; on Belgian frontier and N. Sea; flourishing agr., mining, iron and coal, textile and chemical mnfs.; cap. Lille; a. 2,229 sq. m.; p. (1954) *2,098,545*.

Nordenham, *pt.*, Lower Saxony, Germany; on Lower Weser opposite Bremerhaven; cables, textiles, metals, shipbldg., fishing pt.; p. (estd. 1954) *28,100*.

Norderney, *I.*, Frisian Is., Germany; popular seaside resort; p. *4,098*.

Nordhausen, *c.*, Thuringia, Germany; in Harz Mtns.; cath.; spirits, tobacco, machin., wood, textiles; rly. junction; p. (estd. 1954) *32,900*.

Nordhorn, *t.*, Lower Saxony, Germany; nr. Neth. frontier; textiles; p. (estd. 1954) *35,400*.

Nordkapp or N. Cape, *most N. point*, Europe; on Magerö I., Norway.

Nordkyn, *most N. point*, with N. Cape, of the European mainland, Norway, opposite N. Cape.

Nordland, *co.*, Norway; a. 14,728 sq. m.; p. (1950) *221,701*.

Nordlingen, *t.*, Bavaria, Germany; carpet factories; p. *8,800*.

Nore, The, *sandbank, lightship*, Thames estuary, Eng.

Nore, *R.*, Ireland; trib. of R. Barrow; length 70 m.

Norfolk, *co.*, E. Eng.; noted for shallow lake expanses known as the Broads, popular yachting region; farming, corn, potatoes, cattle, fisheries (Yarmouth), brewing, boots, mustard, farm machin.; cap. Norwich; a. 2,055 sq. m.; p. (1951) *546,550*.

Norfolk, *c.*, Nebraska, U.S.A.; on Elkhorn R.; in farming country; p. (1950) *11,335*.

Norfolk, *c.*, Va., U.S.A.; impt. naval sta.; spt.; general mnfs., coffee-roasting; battle between the *Monitor* and *Merrimac* fought off N. 1862; p. (1950) *213,513*.

Norfolk I., *fertile Australian I.*, Pac. Oc.; 800 m. E. of N.S.W. partial autonomy 1957; formerly a penal settlement; discovered by Captain Cook, 10 Oct. 1774; pine-trees; exp. citrus fruits; a. 15 sq. m. p. (1954) *942*.

Noric Alps, *mountainous region*, Styria, S. Austria.

Norilsk, *t.*, E. Siberia, R.S.F.S.R.; p. (1959) *108,000*.

Normal, *t.*, Ill., U.S.A.; mkt. gardening, fruit, plants; univ.; p. (1950) *9,772*.

Norman, *t.*, Okla., U.S.A.; oil-field; cotton processing; agr.; univ. of Okla.; p. (1950) *27,006*.

Norman Wells, *t.*, N.W. Terr., Canada; at confluence of R. Mackenzie and G. Bear R., 70 m. W. of G. Bear L.; ctr. of rich oil-field.

Normandy, *old French prov.*, on Eng. Channel; mainly agr.; now divided into deps. Manche, Calvados, Eure, Seine-Maritime and part of Orne; Rouen was cap.; the Roman Lugdunensis; later a powerful Dukedom; conquered England, 1066.

Normanton, *t.*, *urb. dist.*, W.R. Yorks, Eng.; on R. Calder 2 m. E. of Wakefield; coal-mining, rly. wks.; p. (1951) *19,087*.

Norrbotten, *co.*, N. Sweden; a. 40,754 sq. m.; cap. Piteå; p. (1950) *241,596*.

Norris Dam, Tenn., U.S.A.; across R. Clinch at confluence with R. Tenn., N.W. of Knoxville; lgst. dam Tenn. Valley Authority (TVA); built for flood control and hydro-elec.

Norristown, *bor.*, Penns., U.S.A.; textiles, hosiery, carpets; p. (1950) *38,126*.

Norrköping, *t.*, Sweden; N.E. of Linköping; textiles, sugar, paper; p. (1951) *84,939*.

Norte de Santander, *dep.*, Colombia, S. America; a. 8,295 sq. m.; cap. Cucuta; p. (1947) *409,720*.

North Adams, *c.*, Mass., U.S.A.; on R. Hoosac; textiles, boots, and shoes; p. (1950) *21,567*.

North America, *northern continent*, comprising Mexico, Central America, West Indies, U.S.A., Canada, Greenland; cst. much indented; on W. high chain of mtns., lower range in E., and central plain. Climate varies considerably owing to wide range of latitude and altitude; great extremes of temperature; abundant rainfall on E. cst. and N. of W. cst.; S. of W. cst. Mediterranean; Mexico, sub-tropical and tropical. Vegetation diverse, varying with alt., latitude and climate; coniferous forests in N.; originally deciduous forests from E. cst. to approx. 100° W., then grassland to mtn. vegetation of W. range; semi-desert in S.W.; tropical forests Central America. Prairies once home of bison. Agr.: temperate and tropical prod., cereals, cotton, tobacco, sugar-beet, potatoes, etc.; lumbering; rich in minerals, coal, petroleum, iron, manganese, etc. Gen. inds., comm., shipbldg. Formerly inhabited by Red Indians; now mainly occupied by White

races, with many negroes in S.; a. 8,700,000 sq. m.; p. *185,000,000* (estimated).
North Atlantic Drift, drift of surface waters of Atl. Oc. N.E. from Gulf Stream towards Europe; relatively warm; supplies prevailing S.W. winds with warmth and moisture to modify climate of Brit. Is. and countries on N.W. margin of European Continent. *See* Gen. Inf.
North Attleboro, *t.*, Mass., U.S.A.; jewellery mnfs.; p. (1950) *12,146*.
North Bay, *c.*, Ontario, Canada; p. (1941) *15,599*.
North Berwick, *burgh*, E. Lothian, Scot.; on S. side of F. of Forth, 20 m. E. of Edinburgh; seaside resort; famous golf course; p. (1951) *4,001*.
North Brabant, *prov.*, Neth.; cap. s'Hertogenbosch; a. 1,920 sq. m.; p. (1947) *1,192,640*.
North Braddock, *t.*, Penns., U.S.A.; p. (1950) *14,724*.
North Brookfield, *t.*, Mass., U.S.A.; rubber and asbestos mnfs.; p. (1950) *2,599*.
North Cape, *see* Nordkapp.
North Cape, *most northerly point*, N.I., N.Z.
North Carolina, *S. Atlantic st.*, U.S.A., E. of Tennessee and S. of Virginia; agr., maize, cotton-growing and mftg., tobacco culture and mftg., timber, scrap mica; cap. Raleigh; ch. pt., Wilmington; a. 52,712 sq. m.; p. (1950) *4,061,929*, nearly one-third coloured.
North Channel, Brit. Is.; gives access from Atl. Oc. to Irish Sea between S.W. Scotland (Galloway) and N.E. Ireland (Antrim); length 60 m.; narrowest width 15 m.
North Chicago, *t.*, Ill., U.S.A.; on L. Michigan; chemicals, metallurgy, elec. goods; p. (1950) *8,628*.
North Dakota, *N.W. st.*, U.S.A.; mainly rolling prairie; agr., wheat, maize, oats, barley, flax, cattle, horses, sheep; coal, petroleum; cap. Bismarck; a. 70,665 sq. m.; p. (1950) *619,636*.
North Downs, range of low chalk hills across S. Eng., forming cliffs at Dover; gr. alt. about 800 ft.
North Eastern New Guinea, part of New Guinea under Australian administration as Trusteeship terr. under United Nations; a. 69,700 sq. m.
North East Passage, along N. cst. Europe and Asia between Atlantic and Pacific. *See* Gen. Inf.
North Holland, *prov.*, Neth.; on Zuider Zee; a. 1,051 sq. m.; cap. Haarlem; p. (1948) *1,793,966*.
North Little Rock, *t.*, Ark., U.S.A.; p. (1950) *44,097*.
North Osetian, A.S.S.R., U.S.S.R.; a. 3,100 sq. m.; cereals, livestock, petroleum.
North Platte, *c.*, Nebraska, U.S.A., on N. Platte R., trib. of the Nebraska R.; p. (1950) *15,433*.
North Providence, *see* Nassau.
North Rhine-Westphalia, *Land*, Germany; a. 13,153 sq. m.; p. (1950) *13,196,176*.
North Riding, **Yorkshire**, *see* **Yorkshire, North Riding**.
North Sea, arm of the Atlantic, E. of Gr. Brit., W. of Norway, Sweden and N. Germany, and N. of Holland, Belgium and France; length 600 m., width 400 m.; good fisheries.
North Sea Canal, *ship canal*, N. Holland, Neth.; connects Amsterdam to N. Sea at Ijmuiden; depth 46 ft., length 16 m.
North Shields, *mkt. t.*, Northumberland, Eng.; Tyne pt. and part of the borough Tynemouth; marine engines, chain cables, anchors, rope.
North Sydney, *spt.*, C. Breton I., Nova Scotia; Canada; docks, coal; p. (1941) *6,836*.
North Tonawanda, *c.*, N.Y., U.S.A.; on Niagara R.; mnfs.; p. (1950) *24,731*.
North Walsham, *mkt. t.*, *urb. dist.*, Norfolk, Eng.; 13 m. N.E. of Norwich; p. (1951) *4,733*.
North-West Frontier Province, Pakistan; consists of dist. of Hazara, Peshawar, Kohat, Bannu, Dera Ismail Khan and Mardan; a. 13,815 sq. m.; p. (estd. 1951) *3,239,000*.
North-West Frontier Tribal Area, Pakistan; comprises Malakland, Chitral, Khyber, Kurram, N. and S. Waziristan, Amb, Phulera; total a. 27,242 sq. m.; p. (estd. 1951) *2,460,000*.
North-West Passage, between Atlantic and Pacific along Arctic cst. of Canada. *See* Gen. Inf.
North-West Territories, Canada; the N.W. region of Canada between the Yukon on the W., Hudson Bay on the E., and B.C., Alberta, Saskatchewan and Manitoba on the S.; divided into 3 districts, viz., Franklin, Mackenzie and Keewatin; gold- and silver-mining, radium, uranium, petroleum, furs, fisheries; a. 1,304,903 sq. m.; p. (1956) *19,313*.
North Woolwich, *t.*, Essex, Eng.; on R. Thames; mftg.
North York Moors, *limestone plateau*, N.R., Yorkshire; lies S. of estuary of R. Tees; drained N. to R. Tees, S. to R. Derwent and to N. Sea by R. Esk; heather moorland; some pastoral farming on lower slopes; impt. iron-ore quarrying along N. edge in Cleveland dist.; alt. varies from 1,000 to 1,500 ft.
Northallerton, *t.*, *urb. dist.*, N.R. Yorks, Eng.; in broad gap between Cleveland Hills and Pennines; dairy farming and agr. dist.; p. (1951) *6,087*.
Northam, *t.*, W. Australia; on R. Avon, 66 m. from Perth, Australia; p. (1957) *6,305*.
Northampton, *S. Midland co.*, Eng.; chiefly agr.; iron, mining and mftg.; footwear, lace, leather, flax, light engin.; co. t., Northampton; a. 998 sq. m.; p. (1951) *359,550*.
Northampton, *t.*, *co. bor.*, Northampton, Eng.; on R. Nene; footwear mftg., leather goods, light engin.; p. (1951) *104,429*.
Northampton, *c.*, Mass., U.S.A.; textiles, paper; univ.; p. (1950) *29,063*.
Northampton, *t.*, Penns., U.S.A.; cement; beer; clothes; quarrying; p. (1950) *9,332*.
Northbridge, *industl. t.*, Mass., U.S.A.; p. (1950) *10,476*.
Northcote, *t.*, Victoria, Australia; N. sub. Melbourne; mnfs.; p. (1947) *42,713*.
Northeim, *industl. t.*, Lower Saxony, Germany; on R. Ruhme; p. *12,000*.
Northern Bukovina, formerly part of Romania, ceded to U.S.S.R. 1940 and now forms part of Ukrainian S.S.R.
Northern Ireland, consists of the administrative cos. of Antrim, Armagh, Down, Fermanagh, Londonderry and Tyrone, and administrative bors. of Belfast and Londonderry. Has its own parliament and executive Government under a Governor appointed by the Crown. Returns 12 members to British House of Commons; agr., oats, potatoes, etc., flax, fruit, hay, chalk, granite, etc., linen, shipbldg.; new inds. being established; cap. Belfast; a. 5,238 sq. m.; p. (1951) *1,370,709*.
Northern Rhodesia, *Brit. prot.*, Central Africa; became member st. of "Federation of Rhodesia and Nyasaland" in 1953, administered from federal cap. Salisbury, S. Rhodesia; tropical climate, moderate rains; savannah vegetation; maize, tobacco, wheat, coffee, zinc, copper, vanadium, gold, ivory; cap. Lusaka; a. 288,130 sq. m.; p. (1951) *1,977,000*.
Northern Territories, Ghana, West Africa; lies N. of latitude 8° N.; ch. t. Tamale; incl. Togoland a. 41,063 sq. m.; p. (1948) *1,076,696*.
Northern Territory, a large tract of land N. of S. Australia; stock-raising, gold, copper, tungsten, and impt. uranium deposits; a. 523,620 sq. m.; ch. t. Darwin; p. (estd. 1958) *18,898*.
Northfield, *c.*, S. Minn., U.S.A.; agr., dairying; p. (1950) *7,487*.
Northfleet, *t.*, *urb. dist.*, Kent, Eng.; on S. bank of R. Thames, adjoining Gravesend; cement, paper, rubber tyres, cables; p. (1951) *18,803*.
Northumberland, *N. maritime co.*, Eng.; on border of Scot.; pastoral, mining, coal and lead, mftg.; chemicals, glass, engin., and shipbldg. on Tyneside; cap. Newcastle-upon-Tyne; a. 2,019 sq. m.; p. (1951) *798,175*.
Northumberland Straits, separates Prince Edward I. from Nova Scotia and New Brunswick.
Northwich, *mkt. t.*, *urb. dist.*, Cheshire, Eng.; on R. Weaver, 10 m. S.E. of Runcorn; chemicals, salt, engin.; p. (1951) *17,480*.
Norton, *t.*, S.W. Va., U.S.A.; coal, mftg.; p. (1950) *4,315*.
Norton, *t.*, *urb. dist.*, E.R. Yorks, Eng.; on R. Derwent opposite Malton; p. (1951) *4,814*.
Norton Sound, *inlet*, W. cst. Alaska, Behring Sea; 200 m. long.
Norwalk, *t.*, Conn., U.S.A.; on Long I. Sound; good harbour, oysters, iron foundries, clothing; p. (1950) *49,460*.

Norwalk, *bor.*, Ohio, U.S.A.; mftg. ctr. of farming dist.; p. (1950) *9,775*.
Norway, *kingdom*, N. Europe; fjord cst., mountainous; climate influenced by prevailing westerly winds, heavy rain and snowfall coastal regions; barley, forest prod., aluminium, pyrites; fisheries; greatly developed hydro-elec. power; cap. Oslo; a. 124,556 sq. m.; p. (1957) *3,477,786*.
Norwich, *c.*, *co. bor.*, *co. t.*, Norfolk, Eng.; on R. Wensum just above confluence with R. Yare; cath., old cas., cult. ctr., agr. ctr.; boots, shoes, textiles, gen. inds.; p. (1951) *121,226*.
Norwich, *c.*, Conn., U.S.A.; firearms, cutlery and machin., textiles; p. (1950) *23,429*.
Norwich, *t.*, N.Y., U.S.A.; chemicals, dairying, agr., farm tools; p. (1950) *8,816*.
Norwood, S., *sub. div.*, Lambeth, Surrey, Eng.; mainly residtl.
Norwood, Ohio, U.S.A.; *sub.*, Cincinnati; p. (1950) *35,001*.
Norwood, *t.*, Mass., U.S.A.; p. (1950) *16,636*.
Nossi Bé, *Is.*, Indian Ocean; off W. cst. of Madagascar; a. 130 sq. m.; part of Fr. col. of Madagascar; rice, coffee, tobacco.
Notec (Netze), *R.*, Poland; trib. of R. Warta; length 140 m.
Noto, *c.*, Sicily; W. of Syracuse; cath.; wine, olive oil, mnfs.; p. *32,575*.
Notodden, *t.*, S. Norway; hydro-elec. power; iron smelting; nitrates; p. *6,192*.
Notre Dame Bay, N. cst., Newfoundland, Canada.
Nottingham, *midland co.*, Eng.; wheat, oats, barley, cattle, coal; co. t. Nottingham; a. 844 sq. m.; p. (1951) *841,083*.

Nowa Huta, *t.*, Poland; S.E. Kraków, on R. Vistula; newly developed metallurgical ctr.; p. (1954) *50,000*.
Nowa Sól (Neusalz), *t.*, Lower Silesia, Poland; on R. Oder; chemicals; p. *13,474*.
Nowata, *t.*, N.E. Okla., U.S.A.; agr., natural gas, oil-field gear; p. (1950) *3,965*.
Nowawes, *c.*, Brandenburg, Germany; textiles, engin., chemicals; p. *26,975*.
Nowra, *t.*, N.S.W., Australia; on E. cst. at mouth of Shoalhaven R.; collecting ctr. for agr. and pastoral prod. of coastal plain; at S. terminus of rly. along E. cst. of Australia.
Nowy Sacz, *industl. t.*, Krakow, S. Poland; on R. Dunajec; lignite; p. *23,000*.
Noya, *spt.*, Spain; lace and linen inds.; p. *12,016*.
Noyon, *t.*, Oise, France; birthplace of Calvin; fine cath.; p. (1946) *6,483*.
Nubia, *ancient Ethiopia*, S. of Egypt, Africa; now included in Sudan; ch. c. Khartoum.
Nubian Desert, Sudan, N.E. Africa; between R. Nile and Red Sea; alt. 1,200–9,000 ft.; a. approx. 90,000 sq. m.
Nuble, *prov.*, Chile; bordering on Argentina; a. 5,484 sq. m.; cap. Chillan; p. (1957) *301,654*.
Nueces, *R.*, Texas, U.S.A.; flows to G. of Mexico; length 400 m.
Nueva Esparta, *st.*, Venezuela; cap. La Asunción; p. (1947) *69,195*.
Nuevo Laredo, *c.*, E. Mexico; agr., cotton, maize, cattle rearing; p. (1940) *28,872*.
Nuevo León, *st.*, Mexico; agr. and stock raising, sugar; cap. Monterrey; a. 25,134 sq. m.; p. (1950) *738,596*.
Nullarbor Plain, S. Australia; low, level, limestone plateau fringing Gr. Australian Bight; arid; treeless, salt-bush scrub; crossed by Trans-continental Rly. between Naretha (W. Australia) and Ooldea; rly. is dead straight, dead level for over 300 m.
Nun, *ch. mouth* of R. Niger, Africa.
Nun, *R.*, Manchuria, China; trib. of the Sungari; length 500 m.
Nun, *R.*, on S. frontier of Morocco, N. Africa; with t. thereon; length 130 m.
Nuneaton, *mkt. t.*, *mun. bor.*, Warwick, Eng.; on R. Anker, 18 m. E. of Birmingham; coal-mining, quarrying, textiles, engin., lt. inds.; p. (1951) *54,408*.
Nunkiang, *prov.*, China; a. 23,912 sq. m.; cap. Lungkiang; p. (1947) *2,094,000*.
Nuremberg (Nürnberg), *t.*, Bavaria, Germany; cas., museum, cultural academy and many historic bldgs.; metals, elec., machin., pencils and crayons, glass, "Lelokuchen", toys; rly. junction; p. (estd. 1954) *398,800*.
Nutley, *t.*, N.J., U.S.A.; p. (1950) *26,992*.
Nyasa, *L.*, Central Africa; southward extension of the Great Rift Valley; 1,500 ft. above sea-level; length, 350 m., breadth 40 m.; drains by R. Shire into R. Zambesi.
Nyasaland Protectorate, Brit. Central Africa; became member st. of "Federation of Rhodesia and Nyasaland" in 1953; along W. cst. L. Nyasa; hot, wet summer, cooler, dry winter; vegetation, savannah, subtropical forest; tobacco, cotton, coffee, ivory; cap. Zomba; a. 49,177 sq. m.; p. (1958) *2,740,000*.
Nyborg, *t.*, Denmark; on Fyn I.; p. *9,559*.
Nyeri, *cap.*, Central Prov. "Kikuyu native reserve" Kenya col. and prot., Africa.
Nyiregyhháza, *mftg. t.*, Hungary; wine, farming, implements; p. (estd. 1957) *55,000*.
Nyköbing, *spt.*, Falster I., Denmark; light engin., food-packing, margarine, and sugar-refining inds.; p. *16,097*.
Nyköping, *spt.*, Sweden; at head of inlet on cst.; furniture, textile, timber mnfs.; p. (1951) *20,477*.
Nystad (Uusikapunki), *spt.*, Abo-Björneborg, Finland; on G. of Bothnia; p. *3,946*.

O

Oadby, *urb. dist.*, Leics, Eng.; 3 m. S.E. of Leic.; boots and shoes; p. (1951) *6,206*.
Oahu, *I.*, Hawaiian Is., Pac. Oc.; sugar, pine-apples; tourist tr.; cap. Honolulu; a. 604 sq. m.; p. (1940) *358,911*.
Oak Park Village, *t.*, Ill., U.S.A.; now included in Chicago; p. (1950) *63,529*.
Oakengates, *t.*, *urb. dist.*, Salop, Eng.; 15 m. N.W. of Wolverhampton; iron and steel, pre-cast concrete, engin.; p. (1951) *11,659*.

Oakham, *co. t., urb. dist.*, Rutland, Eng.; 9 m. S.E. of Melton Mowbray; mkt.; hosiery; p. (1951) *3,537*.
Oakland, *c.*, Cal., U.S.A.; on San Francisco Bay; residtl. sub.; motor cars, shipbldg., fruit canning, elec. machin., clothing, tanneries; p. (1950) *384,575*.
Oamaru, *bor., spt.*, S.I., N.Z.; wool, frozen meat; p. (1951) *8,119*.
Oaxaca, *st.*, Pacific cst., Mexico; cereals, rubber, coffee, mining; cap. Oaxaca; a. 36,371 sq. m.; p. (1950) *1,412,772*.
Oaxaca, *c., cap.*, Oaxaca st., Mexico; alt. 4,800 ft.; ctr. of cochineal tr.; table linen weaving, wool zarapes; coffee; silver, gold; cattle; p. (1940) *31,839*.
Ob, *G.*, U.S.S.R.; inlet of Arctic Ocean; length 600 m.
Ob, *R.*, W. Siberia, U.S.S.R.; flows from the Altai Mtns. to the G. of Ob; length (with trib. R. Irtish) 2,600 m.
Oban, *spt., burgh*, Argyll, Scot.; on F. of Lorne; summer resort of Highland tourists; terminus of rly. from Stirling; ctr. for local shipping; woollens, tartans; p. (1951) *6,227*.
Oberlahnstein, *t.*, Germany; at junction of Rs. Rhine and Lahn; old cas., ancient walls; mining.

Panama, *spt.*, Panama; cath.; harbour at S. entrance to Canal; p. *123,000*.

Panama, *canal zone*, Panama; strip of land 47 m. long by 10 m. wide, extending 5 m. on either side Panama Canal, under U.S. jurisdiction; p. (1954) *38,953* (excluding Forces personnel).

Panama Canal, Canal Zone, Panama; length 51 m. ranging in width from 300 to 1,000 ft., minimum depth 41 ft.; time of transit through canal 7–8 hours; canal starts at Cristobal (Atlantic), to Gatun locks, through Gatun Lake, Culebra cut, Pedro Miguel locks, Miraflores locks to Balboa (Pacific).

Panaria, *I.*, Lipari Is., Italy; a. 1 sq. m.; hot springs, vineyards, olives.

Panarukan, *spt.*, Java, Indonesia; exp. tobacco, sugar; p. *7,455*.

Panay, *I.*, Philippines; between Negros I. and Mindoro I.; a. 4,446 sq. m.; cotton, rice, sugar, coffee.

Pancevo, *t.*, Voivodina, Jugoslavia; wheat, maize, timber, glass, textiles, ironwks.; p. (1953) *30,103*.

Pandharpur, *t.*, Bombay, India; on R. Bhima; temple, pilgrimages; p. (1941) *25,000*.

Pando, *dep.*, Bolivia; p. *18,600*; cap. Cobija; p. (1950) *19,804*.

Pando, *t.*, Uruguay; p. *9,600*.

Panevežys, *t.*, Lithuanian S.S.R.; textiles; p. (1954) *60,000*.

Pangalanes Canal (Canal Des Pangalanes), Madagascar; follows E. cst. from Farafangana to Tamatave, through series of lagoons; length 300 m.

Pangani, *spt.*, Tanganyika Terr., Africa; copra, sisal hemp, maize; p. *3,000*.

Pangkalanbrandan, *spt.*, Sumatra, Indonesia; oil-refining and exp.

Panipat, *t.*, E. Punjab, India; silver and brass, cotton goods, blankets, carpets, pottery; p. (1941) *37,837*.

Panjsher Valley, Afghanistan; silver-mines, unexploited; mica-mine.

Pantar I., Lesser Sunda Is., Indonesia; mtns.; p. *8,000*.

Pantelleria, *volcanic I.*, Mediterranean, Italy; midway between W. Sicily and Tunisia; a. 58 sq. m.; ch. t. P. on N.W. cst.; figs, raisins, vines, capers, cereals; fishing; p. *10,000*.

Pantin, *sub.*, Paris, France; glasswork, sugar ref., tobacco factories, chemicals, leather, tallow; p. (1954) *36,963*.

Paola, *cst. t.*, Calabria, Italy; oil and wine tr.; p. *13,625*.

Paoting, *one of the chief cs.*, Hopei prov., China; on the Yungting R.; gr. tr.; p. *120,000*.

Paotow, *t.*, Suiyan, N.W. China; on left bank of Hwang Ho at W. end of Peiping–Suiyan rly.; terminus of caravan routes through Gobi Desert and Tarim Basin to Turkestan; gr. tr. ctr.

Papeete, *cap.*, Tahiti I., Society Is., Pac. Oc.; French col.; connected by air service with Noumea (New Caledonia); exp. copra and phosphates; p. (1946) *12,428*.

Paphos, *administrative dist.*, Cyprus; ancient c., ruins; serious earthquake 1953; p. *5,866*.

Papua–New Guinea, *terr.*, S.E. New Guinea; provisionally administered by the Commonwealth of Australia, consists of the S.E. part of the I. of New Guinea; cap. Port Moresby; gold, copra, rubber, timber; total a. 183,540 sq. m.; p. (1957) *1,779,128* (inc. approx. *22,558* non-indigenous).

Pará, *st.*, Brazil; densely forested; rubber, fruits, cacao, Brazil nuts; cap. Bélem; a. 464,780 sq. m.; p. (1950) *1,142,846*.

Pará, *spt.*, Brazil, *see* **Bélem**.

Paraguari, *t.*, Paraguay; tobacco, cotton, cattle, potteries, tanneries, distilleries; p. (1945) *11,775*.

Paraguay, *rep.*, S. America; undulating cty., swamps, forests; Rs., Paraguay, Pilcomayo, Paraná; climate, hot summers, warm winters, moderate rainfall; religion, R.C.; communications poor; fertile; cattle, yerba maté, oranges, sugar, maize, cotton, tobacco, lumber, quebracho extract; iron, manganese, copper; meat packing; cap. Asunción; a. 157,006 sq. m.; p. (1950) *1,328,452*.

Paraguay, *R.*, S. America; rises in plateau of Mato Grosso, flows S. and joins R. Paraná nr. Corrientes; forms bdy. between Brazil and Bolivia, Brazil and Paraguay; approx. length 1,200 m.

Paráiba, *st.*, Brazil; cotton, cocoa, sugar, rubber, tobacco; cap. João Pessóa; a. 21,730 sq. m.; p. (1950) *1,730,784*.

Paráiba, *R.*, Brazil; flows to Atlantic in st. of P.; length 200 m.

Paráiba, *R.*, S. Brazil; rising in São Paulo st., and flowing between Rio de Janeiro and Minas Gerais to the Atlantic N.E. of Rio de J.; length 658 m.

Paramaribo, *spt.*, *cap.*, Neth. Guiana; (Surinam); on R. Surinam; ch. exp., bauxite, timber, rubber, rice, fruit; p. (estd. 1956) *130,000*.

Paraná, *cap.*, Entre Rios prov., Argentina; p. (estd. 1956) *183,897*.

Paraná, *st.*, Brazil; extensively forested; cap. Curitiba; a. 77,717 sq. m.; p. (1950) *2,149,509*.

Paraná, *R.*, Brazil; formed by junction of Rs. Rio Grande and Parnaiba; flows W. between Paraguay and Argentina; flows into Rio de la Plata; navigable to Brazil frontier nr. Iguassú Falls; length 2,000 m.

Paranaguá, *spt.*, Paraná st., Brazil; ch. pt. for Paraná; in lagoon harbour; exp. maté, timber, coffee, bananas, maize, potatoes; p. (1947) *23,000*.

Pardes Hanna, *vil.*, Israel; citrus fruits, mineral water, cheese, plastics; p. *3,500*.

Pardubice, *t.*, Czechoslovakia; saw-milling; brewing, distilling; p. (1957) *54,077*.

Parenzo, *spt.*, Italy; cath.; fishing; Roman remains.

Pariñas, *C.*, Peru, S. America.

Paris, *c.*, *cap.*, France; on R. Seine; 5th c. of Europe; Notre Dame, Louvre, Palais de Justice, Palais Tuileries, Palais Royal; 4 triumphal arches; Eiffel Tower 985 ft. high; network of canals, rivers, roads, railways; Latin quarter with Sorbonne (univ. founded 1253); siege Germans 1870–71, occupied by Germans 1940–45; inds.; clothes, boots, perfumes, watches, fancy articles, instruments, books, flour, cottonseed oil; p. (1954) *2,850,189*.

Paris, *t.*, Ontario, Canada; p. *4,637*.

Paris, *t.*, Ill., U.S.A.; p. (1950) *9,460*.

Paris, *t.*, Texas, U.S.A.; cotton, fruit, canned goods; p. (1950) *21,643*.

Parkersburg, *c.*, W. Va., U.S.A.; on Ohio R.; iron- and steel-wks., oil and natural gas, coal, glassware, rayon, porcelain; p. (1950) *29,684*.

Parkes, *t.*, N.S.W., Australia; p. (1958) *8,380*.

Parma, *prov.*, Emilia, Italy; a. 1,258 sq. m.; p. (1951) *390,601*.

Parma, *t.*, N. Italy; between the Apennines and the R. Po; univ., cath.; flourishing tr.; food processing, wine, cheese; precision instruments; agr. machin., footwear, felt hats; p. (1951) *122,212*.

Parnaiba, *R.*, rises in Brazil, flows into N. Atlantic Ocean, forms bdy. between Maranhão and Piaui; length 750 m.

Parnaiba, *spt.*, Piaui, Brazil; cotton, cattle; p. (1947) *22,671*.

Parnassos, *mtn. ridge*, Greece; 83 m. N.W. of Athens, nr. the ancient Delphi, the modern

Liakhura; highest summit, Licoreia, alt. 8,068 ft.
Parnu, *t.*, Estonian S.S.R.; on G. of Riga; resort; flax, timber, wood pulp, woollens; p. *22,000*.
Páros, *I.*, Grecian Archipelago; W. of Naxos; a. 63 sq. m.; cap. P.
Parramatta, *c.*, N.S.W., Australia; fruit, oranges; p. (1954) *76,100*.
Parrett, *R.*, Somerset, Eng.; flows to Bristol Channel, nr. Bridgwater; length 35 m.
Parry (Mauke), *I.*, Pac. Oc.; part Cook Is., N.Z.; p. *773*.
Parry Sound, *t.*, Ontario, Canada; lumbering; p. *5,765*.
Parsons, *t.*, Kan., U.S.A.; coal, natural gas, machin.; p. (1950) *14,750*.
Partinico, *t.*, Sicily, Italy; silk; p. *22,080*.
Pasadena, *c.*, Cal., U.S.A.; N. of Los Angeles; in fruit-growing region, base of San Gabriel Mtns.; 200-in. telescope on Mt. Palomar; largest in world; p. (1950) *104,577*.
Pasco, *t.*, Wash., U.S.A.; on Snake R.; p. (1950) *10,228*.
Pasco, *see* **Cerro de Pasco**.
Pas-de-Calais, *dep.*, N. France; coal, iron; farming, sugar distilling, paper, pottery; cap. Arras; a. 2,606 sq. m.; p. (1954) *1,276,833*.
Pasig, *t.*, Luzon, Philippines; comm. ctr. of the L. region; p. *29,170*.
Pasir Mas, *t.*, Kelantan, Malaya; rly. junction.
Passage West, *urb. dist.*, *spt.*, Cork, Ireland; shipping, fishing; p. (1951) *2,658*.
Passaic, *c.*, N.J., U.S.A.; silk, chemicals, dyes, rubber goods, mill machin., springs, steel cabinets, tin cans; p. (1950) *57,702*.
Passaic, *R.*, N.J., U.S.A.; flows 100 m. to Newark Bay.
Passau, *t.*, Germany, at confluence of Rs. Danube, Inn and Ilz; near Austrian frontier; trans-shipment base, inds. inc. leather, porcelain, tobacco and brewing; p. (estd. 1954) *34,500*.
Passchendaele, *t.*, Belgium; impt. strategic point in First World War.
Passero I., Mediterranean Sea; off S.E. cst. of Sicily, Italy.
Pasto, *t.*, *cap.*, Naviño dep., Colombia; on flank of Pasto volcano; difficult of access; gold near by; p. (1947) *27,534*.
Pasuruan, *spt.*, Java, Indonesia; exp. sugar, tapioca; p. *36,973*.
Patagonia, Argentina; extensive region, E. of Andes; elevated plateau, arid, sterile; principal Rs., Colorado, Rio Negro and Chubut; minerals, unworked; lge. tracts of grazing for sheep, horses and cattle.

Perth, *t.*, cap. W. Australia; 12 m. above pt. of Fremantle; univ., observatory, race-courses; p. (1957) *355,150*; of c. of Fremantle *20,850.*
Perth Amboy, *spt.*, N.J., U.S.A.; terracotta wks.; shipyards and dry docks; p. (1950) *41,330.*
Peru, *rep.*, S. America; traversed N. to S. by the Andes, attaining 22,000 ft.; ch. Rs., Marañon, Ucayali; in S.E., L. Titicaca (12,450 ft.) lgst. L. in S. America; climate, eastern, very hot, drenching rains, central or mountain zone, sun intensely hot, but shade temperatures low; W. and Pacific cst., heat not excessive, scanty rainfall; religion R.C.; poor communications; sugar, cotton, coffee, wool, hides, timber, cocoa, wheat, tobacco, petroleum, silver, copper; cap. Lima; a. 482,258 sq. m.; p. (1947) *7,991,777.*
Peru (Humboldt), Current, *ocean current*, S. Pac.

Oc.; flows N. along cst. of N. Chile and Peru; relatively cold water causes lower air temperatures and produces cloud and fog.

Perugia, *spt.*, Umbria, Italy; on R. Tiber; univ., observatory; woollens, silks, lace; foodstuffs, furniture, pottery, chemicals, agr. machin.; p. (1951) *94,504*.

Pervouralsk, *t.*, R.S.F.S.R.; in Urals, 25 m. W. of Sverdlovsk; p. (1959) *90,000*.

Pesaro, *Adriatic spt.*, Italy; N.W. of Ancona; resort; figs, wines, oil, silks; majolica ware; sulphur; sugar-refining; p. (1951) *53,900*.

Pescadores Is., *group of Is.*, 30 m. W. of Formosa; total a. about 51 sq. m.; since 1945 Chinese, formerly Japanese.

Pescara, *t.*, Italy; at estuary of R. Aterno, E. cst.; olive oil, soap, pasta, pottery; fishing; p. (1951) *64,802*.

Peshawar, *t.*, N.W. Frontier Province, Pakistan; on rly. to Khyber Pass commanding route Afghanistan–India; military sta.; coal, fruit, sugar; cottons, embroidery, wood carving, copper ware, boat bldg., marble; p. (1951) *151,776*.

Pesquilerto, *R.*, trib. of Rio Grande del Norte, Mexico.

Pessac, *t.*, Gironde, France; grid transf. sta.; wines; p. (1954) *19,226*.

Pest, *c.*, Hungary; on left bank of R. Danube, opposite Buda, and connected therewith by suspension bridge, the two cs. forming the Hungarian cap. of Buda-Pest (*see* **Budapest**).

Petah Tiqva, *t.*, Israel; agr. ctr.; oranges; textiles, chemicals, metal goods, tanning; p. (1946) *18,160*.

Peter I., *uninhabited I.*, Antarctic Ocean; belonging to Norway; a. about 94 sq. m.

Peterborough, *t.*, Ont., Canada; flour milling, elec. machin., hardware; p. (1951) *38,166*.

Peterborough, Soke of, *administrative co.*, Eng.; a. 84 sq. m.; p. (1951) *63,784*.

Peterborough, *c.*, *mun. bor.*, Soke of Peterborough, Eng.; on R. Nene at the margin of The Fens; cath.; rly. ctr.; engin., bricks, paper, milling; p. (1951) *53,412*.

Peterhead, *spt.*, *burgh*, E. Aberdeen, Scot.; on E. cst., 27 m. N.E. of Aberdeen; herring fisheries, tweed, lt. engin.; p. (1951) *12,765*.

Peterlee, *t.*, Durham, Eng.; on plateau of E. Durham, 11 m. E. of Durham; one of "New Towns" designated 1948; ctr. of coal-mng. dist.; lt. engin.; p. (estd. 1959) *10,000*.

Petermann Peak, Greenland; alt. 9,175 ft.

Petersburg, *t.*, Alaska, U.S.A.; p. (1951) *1,605*.

Petersburg, *c.*, Va., U.S.A.; tobacco, meat-canning, cotton; optical goods; p. (1950) *35,054*.

Petersfield, *t.*, *urb. dist.*, Hants, Eng.; on R. Rother, 12 m. N.W. of Chichester; college; malting, brewing; p. (1951) *6,616*.

Petit Morin, *R.*, France; trib. of R. Marne.

Petra, *ancient t.*, Jordan; temples, rock tombs and Roman ruins.

Petra, *t.*, Majorca, Spain; birthplace of founder of San Francisco.

Petric, *t.*, S. Bulgaria; nr. Jugoslav border; p. *13,456*.

Petriu, *t.*, Siam; rice mills.

Petropavlovsk, *spt.*, Kamchatka Pen., U.S.S.R.; p. (1959) *86,000*.

Petropavlovsk, *t.*, Kazakh. S.S.R.; on R. Ishim; flour, leather, meat canneries; furs, engin.; p. (1959) *131,000*.

Petropolis, *t.*, Rio de Janeiro, Brazil; health resort, 2,300 ft. above sea-level; p. *46,829*.

Petrosani, *t.*, Romania; S. of Deva; coal; p. *14,138*.

Petrovgrad, *t.*, N.W. Jugoslavia; p. *32,838*.

Petrovsk, *t.*, S.E. Siberia, R.S.F.S.R.; iron and steel, non-ferrous metallurgy; p. (1954) *50,000*.

Petrozavodsk, *t.*, R.S.F.S.R.; on W. side of L. Onega; mica, paper, engin.; p. (1959) *135,000*.

Petsamo, *see* **Pechenga**.

Petworth, *mkt. t.*, *rural dist.*, nr. Chichester, W. Sussex, Eng.; in Rother valley, 12 m. N.E. of Chichester; building stone; p. (rural dist. 1951) *9,184*.

Pevensey Levels, *marshy area*, E. Sussex, Eng.; lie behind coastal sand-bars between Eastbourne and Bexhill, extend 5 m. inland to Hailsham; now largely drained, cattle pastures; a. 24 sq. m.

Pewsey, *vil.*, *rur. dist.*, Wilts, Eng.; in Vale of Pewsey, 7 m. E. of Devizes; farming, iron, bricks, tiles; p. (rural dist. 1951) *18,232*.

Pforzheim, *t.*, Baden-Württemberg, Germany; S.E. of Karlsruhe; gold, silver, metal wks.; p. (estd. 1954) *61,100*.

Phanrang, ctr. of irrigation scheme, Annam, Viet-Nam, Indo-China.

Phanthiet, *spt.*, S. Annam, Viet-Nam, Indo-China; exp. dried and salt fish; p. *5,000*.

Pharsala, *c.*, Thessaly, Greece; S. of Larissa; Cæsar's triumphs over Pompey.

Philadelphia, *c.*, *spt.*, Penns., U.S.A.; univ., R.C. cath., masonic temple; mint, academy of fine arts; shipbldg., locomotives, woollens, cottons, worsteds; sugar, and petroleum refining; exp. petroleum, maize, coal, and wheat; ctr. of War of Independence, from 1790 to 1809; fed. cap. founded by Wm. Penn 1682; p. (1950) *2,071,605*.

Philae, *I.*, Upper Egypt; in Nile above Aswan Dam; temples, most noteworthy "Temple of Isis"; bldgs. usually submerged by dam waters.

Philippeville, *t.*, *spt.*, Algeria; wine, sheep, cattle, cereals, cork, cigarettes, mineral water, macaroni, fish canning; p. (1948) *57,091*.

Philippeville, *t.*, Namur, S. Belgium; p. *1,230*.

Philippine Is., *rep.*, Asia; comprising over 2,000 Is., lgst. being Luzon, Mindanao, Mindoro and Palawan; mountainous, many volcanoes, highest Apo, 10,312 ft.; coal, iron, copper, gold; dye-woods, rice, maize, tobacco, coffee, cotton, Manila hemp; coconuts, cigars, pearl fisheries; cap. Manila; p. (1948) *19,234,182*.

Philippopolis, *see* **Plovdiv**.

Philipstown, *see* **Daingean**.

Phillipsburg, *c.*, N.J., U.S.A.; on Delaware R.; water-power, machin., rly. wks.; silk and pulp; p. (1950) *18,919*.

Phitsanulok, *t.*, central Siam; temples; weaving; p. *25,000*.

Phlorina (Florina), *pref.*, Greece; occupied by Bulgaria, April 1941, restored to Greece by peace treaty of 1947; cap. Phlorina; p. (1951) *69,367*.

Phlorina (Florina), *t.*, Phlorina, Greece; in basin at alt. 3,000 ft., 10 m. from Jugoslav border, 15 m. from Albanian border, purely agr. interests; p. (1951) *12,278*.

Phnom Penh, *t.*, cap. Cambodia, Indo-China; on Mékong R.; rice, cotton; p. (estd. 1949) *260,000*.

Phoenix, *t.*, Arizona, U.S.A.; winter resort; cotton, fruits, livestock; p. (1950) *106,818*.

Phoenix Group, *Is.*, Pac. Oc.; part of Gilbert and Ellice I. colony; a. 16 sq. m.; U.S. now have some rights over Canton and Enderbury; Canton used as international airport; p. (1956) *1,257*.

Phthiotis and Phocis, *pref.*, Greece; cap. Lamia; p. (1951) *199,145*.

Piacenza, *prov.*, Emilia, Italy; a. 965 sq. m.; p. (1951) *299,036*.

Piacenza, *t.*, Italy; cath., palaces, arsenal; motor cars, chemicals, cement; p. (1951) *72,769*.

Pianosa I., Italy; penal settlement; cereals, vineyards, olives; p. *1,000*.

Pias, *t.*, Alentejo Baixo, S. Portugal; E. of Beja.

Piata, *spt.*, N. Peru; exp. cotton, hides, skins, Panama hats; p. *6,958*.

Piatra, *t.*, Moldavia, Romania; timber, pharmaceuticals, soap; p. *30,183*.

Piaui, *st.*, Brazil; cattle, cotton, sugar, tobacco, rubber; silver, iron and lead; a. 96,262 sq. m.; cap. Teresina; p. (1950) *1,064,438*.

Piave, *R.*, N.E. Italy; flows to Adriatic; length 125 m.

Piazza Armerina, Sicily, Italy; oil, wines and nuts; remarkable Roman mosaics (recently discovered); p. *28,420*.

Pibor, *t.*, S.E., Sudan; p. *1,000*.

Picardy, *old prov.*, France; which included all the Somme dep. and parts of Pas de Calais, Aisne and Oise; old battle sites, Agincourt and Crécy.

Pichincha, *prov.*, Ecuador; cap. Quito—the cap. of Ecuador; a. 6,218 sq. m.; p. (1950) *386,520*.

Pickering, *mkt. t.*, *urb. dist.*, N.R. Yorks, Eng.; on N. margin of Vale of Pickering, 6 m. N. of Malton; church with murals; iron, bricks; p. (1951) *4 332*.

Pickering, Vale of, E.R. Yorks, Eng.; wide, flat-floored vale, once occupied by glacial lake; bounded to N. by N. York Moors, to S. by York Wolds; drained W. by R. Derwent, which leaves Vale through Kirkham gap; alluvial

soils, marshy in ctr.; crop-farming along margins, grain, fodder crops; cattle grazing on damper meadows in ctr.; ch. ts. Pickering, Malton, Helmsley.
Pico da Bandeira, *mtn.*, Brazil; alt. 9,462 ft.
Picton, *t.*, S.I., N.Z.; freezing wks.; tourist and fishing ctr.; p. (1951) *1,928.*
Pictou, *spt.*, Nova Scotia, Canada; coal; p. (1941) *3,069.*
Pidurutalagala, *mtn.*, Ceylon; alt. 8,295 ft.; highest peak in Ceylon.
Piedmont, *region*, N. Italy; rice, wheat, vines, fruits; silk, cottons, woollens; a. 9,813 sq. m.; p. (1951) *3,513,111.*
Piedras Negras, *frontier t.*, Mexico; cattle mkt., coal, silver, zinc and copper; p. *15,663.*
Pierre, *t.*, *cap.*, S.D., U.S.A.; on Missouri R.; p. (1950) *5,715.*
Pietermaritzburg, *t.*, *cap.*, Natal, S. Africa; 30 m. N.W. of Durban; named after Piet Retief and Gerhardus Maritz, two Boer leaders; p. (1951) *74,399.*

Pontardawe, *vil.*, Glamorgan, S. Wales; on R. Tawe, 9 m. N.E. of Swansea; zinc smelting and refining, steel wks.
Pontchartrain, Lake, *shallow lake*, lower Mississippi flood plain, U.S.A., connected by indus. canal to New Orleans which lies 6 m. to the south, and by deltaic channels to the gulf of Mexico.
Pontefract, *t., mun. bor.*, W.R. Yorks, Eng.; 7 m. E. of Wakefield; cas. ruins; coal, furniture, confectionery; p. (1951) *23,173.*
Pontevedra, *prov.*, Spain, on Atlantic cst., and bordering Portugal; agr., livestock, fisheries; cap. Pontevedra; a. 1,695 sq. m.; p. (1950) *671,609.*
Pontevedra, *spt.*, cap. Pontevedra prov.; Spain; fishing; p. (1949) *46,168.*
Ponthierville, *t.*, Belg. Congo, Africa; nr. Stanley Falls, Congo R.; Belg. Congo; p. *1,000.*
Pontiac, *t.*, Ill., U.S.A.; agr. machin.; p. (1950) *8,990.*
Pontiac, *c.*, Mich., U.S.A.; on Clinton R.; fishing and shooting, motor cars, rubber goods, machin., varnish; p. (1950) *73,681.*
Pontianak, *t., cap.*, Borneo, Indonesia; exp. rubber, copra; p. *45,196.*
Pontine Is., off W. cst. of Italy; in Tyrrhenian Sea; a. 4½ sq. m.; p. *6,000.*
Pontine Marshes, *region*, Latium, S. Italy; coastal zone S.E. of Rome extending from Velletri to Terracina; formerly highly malarial fens, largely drained and colonised 1930–35; 3,200 new farms, 4 new ts.; ch. t. Littoria; a. approx. 250 sq. m.
Pontresina, *t.*, Grisons, Switzerland; E. of St. Moritz; tourist resort.
Pont-y-mister, *vil.*, Monmouth, Eng.; in valley of R. Ebbw, 6 m. N.W. of Newport; lge. steel-wks., zinc refineries.
Pontypool, *t., urb. dist.*, Monmouth, Eng.; coal, iron, steel, glass, bricks, tin galvanising, nylon at Manhilad; p. (1951) *42,683.*
Pontypridd, *t., urb. dist.*, Glamorgan, Wales; on R. Taff, 12 m. N.W. of Cardiff; coal, iron; p. (1951) *38,622.*
Ponza I., Pontine Is., Italy; wine, wheat, flax; fishing; bentonite-mining; a. 3 sq. m.
Poole, *mkt. t., spt., mun. bor.*, E. Dorset, Eng.; on Poole Harbour, 4 m. W. of Bournemouth; seaplane base; yachting; marine engin., tent mkg., bricks, chemicals; p. (1951) *82,958.*
Poolewe, *par.*, Ross and Cromarty, Scot.; fisheries, farming; p. *1,294.*
Poona, *t.*, Bombay, India; seat of Bombay government during rainy season; cotton, sugar, rice; p. (1951) *480,982.*
Poopo, *L.*, Oruro dep., Bolivia; S. America; situated in Andes at alt. 12,120 ft.; very shallow; fed from L. Titicaca by R. Desaguadero, which flows over saline beds; no outlet, therefore salt-water; max. length 50 m., width 30 m.
Popayan, *cap.*, Cauca Dep., Columbia; cath., univ.; gold, silver, platinum, copper near by; p. (1947) *35,690.*
Poperinghe, *t.*, W. Flanders, Belgium; woollens, linens, hops; p. *12,393.*
Poplar, *metropolitan bor.*, E. London, Eng.; Thames-side; industl. dist.; p. (1951) *73,544.*
Popocatepetl, *volcano*, nr. Puebla, Mexico; alt. *17,887* ft.
Porbandar, *spt.*, Bombay, India; cement, silk, cotton; imports coal, dates, timber, machin., petroleum; birthplace of Mahatma Gandhi; p. *65,000.*
Porcupine Hills, *t.*, Ontario, Canada; on branch rly. 40 m. S. of Cochrane; ctr. of impt. gold-mining dist.
Pordenone, *t.*, Italy; cath.; cottons, silks, pottery; p. *82,506.*
Pori (Björneborg), *spt.*, S. Finland; at mouth of R. Kokemäen; copper refinery, rolling mills, match, paper and pulp wks.; p. (1950) *43,137.*
Porjus, *t.*, Norrbotten, N. Sweden; on R. Lulea, where it leaves Stora Lulevatten; impt. hydro-elec. power-sta. supplies power to iron-ore mining dists. of Gällivare and Kiruna, also to Narvik rly.
Porrentruy, *t.*, Berne, Switzerland; watches; p. *6,121.*
Porsgrunn, *spt.*, Norway; timber, shipping, engin., porcelain, explosives; p. *8,980.*
Port Alfred, *t.*, C. of Good Hope, S. Africa; resort; harbour entrance too shallow for lge. boats; p. *5,937.*
Port Amelia, *spt.*, Mozambique; sisal, coconuts, cotton, maize, groundnuts; p. (1946) *34,885.*
Port Antonio, *t.*, Jamaica, W. Indies; p. *5,482.*
Port Arthur (Lushun), *spt.*, Manchuria, China;

Chinese naval base; p. (estd. 1936) *141,291.* (*See* Lüta.)
Port Arthur, *L. pt.*, Ontario, Canada; on N.W. cst. of L. Superior; lumbering, mining, grain, milling, exp. ctr.; p. (1941) *24,426.*
Port Arthur, *t.*, Texas, U.S.A.; p. (1950) *57,530.*
Port au Prince, *spt.*, Haiti, W. Indies; coffee, cacao; p. *125,000.*
Port Augusta, *t.*, *spt.*, S. Australia; at head of Spencer G.; fine harbour; exp. wheat, fruit; p. (1947) *3,270.*
Port aux Basques, *pt.*, Newfoundland, Canada; p. *2,108.*
Port Chalmers, *t.*, *bor.*, S.I., N.Z.; docks, shipyards; p. (1951) *2,680.*
Port Chester, *t.*, N.Y., U.S.A.; on Long I. Sound; summer resort, cottons and woollens; p. (1950) *23,970.*
Port Colborne, *t.*, Ont., Canada; port on L. Erie; iron smelting; nickel, copper refining; p. (1941) *6,993.*
Port Elizabeth, *spt.*, C. of Good Hope, S. Africa; on Algoa Bay; exp. skins, wool, ostrich feathers, mohair; foundries, soap, chemicals, food preservation, sawmills; p. (estd.) *150,000.*
Port Erin, *vil.*, I. of Man, Eng.; on S.E. cst.; seaside resort, fisheries.
Port Essington, *N. point*, of Coburg Peninsula, N. Terr., Australia.
Port Francqui, *t.*, Belg. Congo; present terminus of Congo rly. on Kasai R.; p. *5,000.*
Port Fuad, *t.*, Egypt; N. entrance to Suez Canal; p. *1,000.*
Port Gentil, *spt.*, Gabrun rep., Eq. Africa; exp. palm oil, mahogany, ebony; sawmills, fishing; p. *5,000.*
Port Glasgow, *burgh*, *spt.*, Renfrew, Scot.; on S. bank of R. Clyde, 17 m. below Glasgow; ship-bldg. and repairing, textiles, rope, canvas mftg.; p. (1951) *21,612.*
Port Harcourt, *spt.*, Nigeria; 30 m. from sea on E. branch of Niger delta; terminus of E. Nigerian rly. system; exp. tin, palm oil, groundnuts; p. (1953) *72,000.*
Port Hedland, *sm. spt.*, W. Australia; on N.W. cst. 285 m. S.W. of Broome; exp. gold and other metals from Pilbarra gold-field; imports food and machin.; linked to Marble Bar by narrow-gauge rly.
Port Herald, *t.*, Nyasaland Prot., Africa, pt. no Shire R.
Port Hope, *t.*, Ont., Canada; midway along N. shore of L. Ontario, fruit, dairying, radium refining; p. (1940) *5,055.*
Port Hunter, N.S.W., Australia; port for Newcastle.
Port Huron, *t.*, Mich., U.S.A.; on L. Huron; summer resort, mineral springs, dry docks, grain elevators; motor-car parts; p. (1950) *35,725.*
Port Jackson, N.S.W., Australia; *natural harbour* for Sydney.
Port Kembla, *spt.*, N.S.W., Australia; S. of Wollongong; iron and steel wks., textiles.
Port Laoighise, *mkt. t.*, Laoighis, Ireland; corn-mills; p. (1946) *3,166.*
Port Lincoln, *spt.*, S. Australia; exp. wheat, frozen meat, tallow, wool; p. (1947) *3,963.*
Port Louis, *cap.*, Mauritius, Indian Ocean; ch. comm. ctr. of col.; p. (estd. 1957) *101,145.*
Port Lyautey, *t.*, Morocco; developed since 1912; exp. grain; p. (1946) *56,604.*
Port Macquarie, *t.*, N.S.W., Australia; on Hastings R.; p. (1947) *2,906.*
Port Mahon, *see* **Mahon.**
Port Moody, *terminus*, Canadian Pacific Rly., Vancouver, Brit. Columbia; p. *1,512.*
Port Moresby, *spt.*, *ch. t.*, Papua, New Guinea; promising copper deposits; exp. copra, sandalwood, coffee, rubber, shell; p. *2,503.*
Port Natal, *see* **Durban.**
Port Nelson, *spt.*, Manitoba, Canada; on cst. of Hudson Bay at mouth of R. Nelson; linked by rly. to trans-continental systems via The Pas; exp. wheat, minerals; closed by ice for 7 months each year.
Port Nolloth, *spt.*, C. of Good Hope, Union of S. Africa; pt. serving copper- and diamond-mining dists.
Port of Spain, *cap.*, Trinidad, T.W.I.; cocoa, sugar, asphalt; p. (estd. 1957) *120,650.*
Port Okha, *spt.*, Bombay, India; exp. cement, salt, oilseeds, chemicals.
Port Philip, *lge. inlet*, Victoria, Australia; land-locked bay, with Melbourne on N., Geelong on W.
Port Pirie, *spt.*, S. Australia; smelting ores; exp. wheat, minerals; p. (1947) *12,030.*
Port Radium, *t.*, N.W. Terr., Canada; on Gr. Bear L.; pitchblende deposits; p. *300.*
Port Royal, *t.*, Jamaica, T.W.I.; nr. Kingston; dock-yard.
Port Said, *spt.*, Egypt; N. end Suez Canal; coaling sta.; p. (1947) *178,432.*
Port St. Mary, *vil.*, I. of Man, Eng.; on S.E. cst.; resort; fisheries, boat-bldg.
Port Shepstone, *t.*, Natal, S. Africa; sugar, bark, fibre, maize, fruit, dairying, poultry; cement; p. *2,209.*
Port Sudan, *spt.*, Sudan; 30 m. N. of Suakin; linked by rail to Atbara and Khartoum; p. (1947) *47,000.*
Port Sunlight, Cheshire, Eng.; modern garden village founded 1888 by Lord Leverhulme for the employees of Lever Brothers' Port Sunlight factories; p. *6,000.*
Port Swettenham *spt.*, Selangor, Malaya; exp. tin, rubber, copra, pineapples; p. *11,300.*
Port Talbot, *t.*, *mun. bor.*, Glamorgan, S. Wales; on E. side of Swansea Bay; impt. iron and steel ind., copper, coal; p. (1951) *44,024.*
Port Taufiq, *spt.*, Egypt; S. end of Suez canal; p. *1,000.*
Port Vendres, *spt.*, Pyrénées-Orientales, France; nr. Perpignan; p. (1954) *4,180.*
Portadown, *t.*, *mun. bor.*, Armagh, N. Ireland; on R. Bann, 25 m. S.W. of Belfast; linen, lace, farming; p. (1951) *17,202.*
Portaferry, *spt.*, Down, N. Ireland; shipping, fisheries; p. (1951) *1,275.*
Portage, *t.*, Wis., U.S.A.; iron; p. (1950) *7,334.*
Portage la Prairie, *spt.*, Manitoba, Canada; grain exp.; p. (1956) *10,525.*
Portalegre, *t.*, Portugal; cath.; mkt.; p. (1940) *12,046.*
Portarlington, *t.*, Offaly, Ireland; farming; first place to have elec. power-sta. using local peat fuel; p. (1951) *2,246.*
Portbou, *t.*, on Fr. side of Franco–Spanish border, opposite Rosas on Mediterranean cst.
Porthcawl, *t.*, *urb. dist.*, Glam., Wales; on cst. 10 m. S.E. of Pt. Talbot; resort; p. (1951) *9,529.*
Portici, *spt.*, Campania, S. Italy; on Bay of Naples 5 m. S.E. of Naples; dockland sub. of Naples.
Portishead, *t.*, *urb. dist.*, Somerset, Eng.; on Severn estuary 3 m. S.W. of Avonmouth; shipping; p. (1951) *4,454.*
Portknockie, *burgh*, Banff, Scot.; on N. Buchan cst., 5 m. E. of Buckie; sm. fishing pt.; p. (1951) *1,457.*
Portland, *naval pt.*, *urb. dist.*, Dorset, Eng.; 4 m. S. of Weymouth on sheltered N.E. side of I. of Portland; lge. artificial harbour; lime, stone; p. (1951) *11,324.*
Portland, *t.*, *spt.*, Me., U.S.A.; comm. cap. of Me.; packing, canning, engin., silverware, paper, woollens, matches, cod, mackerel; p. (1950) *77,634.*
Portland, *c.*, Ore., U.S.A.; gr. wheat and flour exp.; iron foundries, meat packing; p. (1950) *373,628.*
Portland Canal, *fjord*, N.W. cst. of America, forming boundary between Alaska and B.C.
Portland, I. of, *peninsula*, Dorset, Eng.; limestone mass, linked to mainland by shingle spit, Chesil Bank, terminatas S. in Portland Bill; bldg.-stone quarries, cement wks.
Portmadoc, *spt.*, *urb. dist.*, Caernarvon, Wales; on Tremadoc Bay; linked by light rly. to Ffestiniog; copper and slate exp.; p. (1951) *4,060.*
Porto, *see* **Oporto.**
Porto Alegre, *c.*, *cap.*, Rio Grande do Sul st., Brazil; exp. lard, preserved meats, rice, timber, tobacco; textiles, chemicals, furniture, brewing, metallurgy; p. (1950) *401,213.*
Porto Empedocle, *spt.*, Sicily, Italy; sulphur refining, flour, furniture, lime, gypsum; p. *14,764.*
Porto Marghera, *spt.*, Venezia, N. Italy; extends along cst. S. from landward end of the causeway linking Venice to the mainland; the modern pt. of Venice, reached by ship canal dredged through shallow lagoon; oil-refineries.

Porto Novo, *t.*, *cap.*, Dahomey, W. Africa; nr. Bight of Benin; p. (1948) *30,827*.
Porto Vecchio, *t.*, Corsica; on E. cst.; p. *5,304*.
Porto Velho, *cap.*, Guaporé st., Brazil; p. *5,000*.
Portobello, *resort*, Midlothian, Scot.; on Firth of Forth, 3 m. E. of Edinburgh; bricks, pottery, paper.
Porto Torres, *spt.*, Sardinia, Italy; exp. iron ore; p. *7,251*.

Richmond, *t.*, Nelson, N.Z.; p. *1,130*.
Richmond, *t.*, Cal., U.S.A.; oil refining; p. (1950) *99,545*.
Richmond, *c.*, Ind., U.S.A.; on R. Whitewater; mnfs.; p. (1950) *39,539*.
Richmond, *c.*, Ky., U.S.A.; in tobacco-growing and horse-rearing region; p. (1950) *10,268*.
Richmond, one of the five bors. of New York City, U.S.A.; p. (1957) *210,146*.
Richmond, *c.*, *cap.*, Va., U.S.A.; on falls on R. James; gr. tobacco mftg. ctr. and mart; p. (1950) *230,310*.
Richrath-Reusrath, *commune*, Rhine prov., Germany; ironwks., textile mills; p. *14,148*.
Rickmansworth, *mkt. t.*, *urb. dist.*, Herts, Eng.; at confluence of Rs. Colne and Chess, 3 m. S.W. of Watford; paper, brewing; residtl.; p. (1951) *24,518*.
Rideau Canal, Canada; from Ottawa R., to Kingston on L. Ontario; length 132 m.
Ridgefield, *t.*, N.J., U.S.A.; p. (1950) *8,312*.
Ridgewood, *t.*, N.J., U.S.A.; p. *17,481*.
Ridgway, *bor.*, Penns., U.S.A.; elec. equipment, engin., leather, lumber yards; p. (1950) *6,244*.
Riesa, *t.*, Saxony, Germany; on R. Elbe, nr. Meissen; steel wks., sawmills; p. (estd. 1954) *36,100*.
Riesengebirge, *mtns.*, Germany; (Czech **Krkonose**, Polish **Karkońesze**).
Riesi, *t.*, Sicily, Italy; industl.; p. *20,200*.
Rieti, *t.*, Perugia, Italy; an ancient Sabine t. in famous fertile dist.; mnfs.; p. (1951) *33,364*.
Riff (Er Rif), *mtns.*, Morocco, N.W. Africa; extend E. along N. African cst. for 200 m. from Straits of Gibraltar; inaccessible and economically unattractive, terr. of semi-nomadic tribes; rises to over 7,000 ft. in many places.
Riga, *cap.*, Latvian S.S.R.; at head of G. of Riga; gr. industl. activity; machin., glass, paper, cottons; rly. and shipbldg., exp. wheat, flax, hemp, dairy produce; p. (1959) *605,000*.
Rigi, *mtn.*, nr. L. Lucerne, Switzerland; alt. 5,905 ft.
Rijeka-Susak, *t.*, Jugoslavia; formerly known as Fiume; belonged to Austria-Hungary before First World War, then to Italy; ceded to Jugoslavia by Italy after Second World War; rival pt. to Trieste; petrol refining, tobacco, chemicals, hydro-elec.; p. (1953) *75,112*.
Rijssen, *t.*, Neth.; p. *10,645*.
Rimac, *R.*, Lima dep., Peru; S. America; rises in W. cordillera of Andes and flows W. to Pac. Oc.; provides water for irrigation and for c. of Lima; length 75 m.
Rimini, *t.*, Emilia, Italy; on the Adriatic cst.; mineral springs, sea-bathing, thriving inds.; p. *72,914*.
Rimnic, *t.*, Romania; on R. Rimnic, nr. Bucharest; industl.
Rimnic, *t.*, Romania; on R. Aluta, 100 m. N.W. Bucharest.
Rimouski, *t.*, Quebec, Canada; on S. bank St. Lawrence R.; lumber; tourists; p. *7,009*.
Ringköbing Fjord, *inlet*, W. cst. Jutland, Denmark.
Ringwood and Fordingbridge, *mkt. t.*, *rural dist.* Hants, Eng.; on R. Avon, nr. Christchurch; p. (rural dist. 1951) *23,908*.
Rio Branco, *R.*, Brazil; prov. Baia, trib. of Rio Grande; length 120 m.
Rio Branco, *R.*, N. Brazil; flowing to Rio Negro; length 370 m.
Rio Branco, *t.*, cap. of Acre st., Brazil.
Rio Branco, *terr.*, Brazil; cap. Boa Vista; a *82,749* sq. m.; p. (1947) *14,010*.
Rio Cuarto, *t.*, Cordoba prov., Argentina; p. *34,354*.
Rio das Mortes, *R.*, Brazil; trib. of the Araguay; length 500 m.
Rio de Janeiro, *maritime st.*, Brazil; a. 16,443 sq. m.; coffee plantations, sugar, cotton, tobacco; thorium; cap. Niterói; p. (est. 1950) *2,326,201*.
Rio de Janeiro, *c.*, Brazil; on Bay of same name; lgst. c. in Brazil, many fine bldgs., flourishing tr. and inds.; very lge. coffee exp., brewing, foundries, milling, sugar-refining; rly. wks.;

shipyards, exp. coffee, sugar, hides, meat, diamonds; p. (1950) *2,413,152*.
Rio de la Plata, *see* **Plate R.**
Rio de Oro, *prov.*, Spanish Sahara; a. 70,000 sq. m.
Rio de San Juan, *R.*, Utah, New Mexico and Colorado, U.S.A.; length 350 m.
Rio Dulce, *R.*, Santiago st., Argentina; length 400 m.
Rio Grande, *R.*, Senegambia, Africa; flows to the Atlantic; length 400 m.
Rio Grande, *headstream* of the R. Paraná, Brazil.
Rio Grande City, *t.*, S. Texas, U.S.A.; on Rio Grande R.; mkt., agr., oil, natural gas; p. (1950) *3,992*.
Rio Grande de Santiago, *R.*, Mexico; flows into the Pacific.
Rio Grande del Norte, *R.*, flows from st. of Colorado through New Mexico to the G. of Mexico; forms bdy. between Texas, U.S.A. and Mexico; length 1,800 m.
Rio Grande do Norte, *st.*, Brazil; sugar, cotton, cattle-rearing; cap. Natal; a. 20,482 sq. m.; p. (1950) *983,572*.
Rio Grande do Sul, *st.*, S. Brazil; cap. Porto Alegre; a. 109,067 sq. m.; p. (1950) *4,213,316*.
Rio Grande do Sul, *spt.*, Brazil; leather; p. *45,000*.
Rio Muni, *Span. col.*, Cent. Africa; with Fernando Po and other Is. forms col. of Span. Guinea; cacao, palm oil, coffee; a. 10,852 sq. m.; p. *135,000*.
Rio Negro, *R.*, Argentina; rises in the Andes, and flows through the terr. of Rio Negro to the Atlantic; length 650 m.
Rio Negro, *terr.*, Argentina; S. of Pampa; cap. Viedma; cattle-rearing region; a. 77,610 sq. m.; p. (estd. 1958) *193,400*.
Rio Negro, *R.*, S. America; rises in Colombia, and flows through N. Brazil to the Amazon; length 1,350 m.
Rio Negro, *dep.*, Uruguay; cap. Fray Bentos; a. 3,269 sq. m.; p. (1953) *51,954*.
Rio Piedras, *t.*, Puerto Rico, W. Indies; univ.; merged with San Juan 1951.
Rio Salada, *R.*, Argentina; rises in the Andes, and flows S.E. to R. Paraná, at Buenos Aires; length 1,000 m.
Rio Tinto, *t.*, Spain; at W. end of Sierra Morena, 40 m. N.E. of Huelva; lead- and copper-mines.
Riobamba, *c.*, Chimborazo, Ecuador; on R. St. Juan; woollens; Inca palace ruins; p. (1938) *26,782*.
Rioja, La, *prov.*, Argentina; gold- and copper-mines; cap. La Rioja; a. 33,394 sq. m.; p. (1947) *109,386*.
Riom, *t.*, Puy-de-Dôme, France; nr. Clermont Ferrand; p. (1954) *12,664*.
Rion *R.*, Georgian S.S.R.; flows from Caucasus to Black Sea; lower half navig.; hydro-elec. sta. at Kutais. (In Greek mythology the R. Phasis of the Argonauts.)
Rionero, *t.*, Potenza prov., S. Italy; nr. Melfi; industl.; p. *12,025*.

Ripley, *mkt. t.*, *urb. dist.*, Derby, Eng.; 7 m. N.E. of Derby; coal, iron, heavy engin., bricks, agr. implements; p. (1951) *18,194*.
Ripley, *t.*, W. Tenn., U.S.A.; lumbering; veneer; cottonseed processing; p. (1950) *3,318*.
Ripon, *c.*, *mun. bor.*, W.R. Yorks, Eng.; on R. Ure; fine cath.; paint and varnish, pre-fabricated concrete structures; p. (1951) *9,464*.
Ripon, *t.*, Wis. U.S.A., on Green L., p. (1950) *5,619*.
Ripon Falls, *see* **Jinja**.
Riposto, *t.*, Sicily, Italy; on E. cst. nr. Taormina; wine export; p. *10,725*.
Ripponden, *urb. dist.*, W.R. Yorks, Eng.; nr. Halifax; p. (1951) *5,213*.
Risca, *t.*, *urb. dist.*, Monmouth, Eng.; on R. Ebbw, 5 m. N.W. of Newport; coal, iron and steel, bricks, tiles, plastics; p. (1951) *15,131*.
Rishton, *t.*, *urb. dist.*, Lancs, Eng.; at N. foot of Rossendale Fells, 4 m. N.E. of Blackburn; p. (1950) *5,794*.
Risley, nr. Warrington, Lancs., Eng.; Industrial Group and Atomic-Energy Authority Establishment.
Riva, *t.*, Trentino, Italy; battle zone in First World War, Nov.–Dec. 1915; p. *12,950*.
Rivas, *spt.*, Nicaragua, Central America; p. *7,443*.
Rive-de-Gier, *t.*, Loire, France; on R. Gier, nr. Lyons; mining ctr.; p. (1954) *15,118*.
Rivera, *dep.*, Uruguay; cap. Rivera; a. 3,793 sq. m.; p. (1953) *91,740*.
Riverina, *pastoral cty.*, N.S.W., Australia; between Lachlan-Murrumbidgee and Murray Rs.; sheep, agr. with irrigation; gold, coal; ch. ts., Wagga Wagga, Albury; a. 26,600 sq. m.; p. *71,000*.
River Rouge, *t.*, Mich., U.S.A.; p. (1950) *20,549*.
Riversdale, *dist.*, *W. prov.*, C. of Gd. Hope, S. Africa; a. 2,462 sq. m.
Riverside, *t.*, Cal., U.S.A.; p. (1950) *46,764*.
Riverside, *t.*, N.J., U.S.A.; p. (1950) *7,199*.
Riverton, *t.*, S.I., N.Z.,; p. (1951) *1,015*.
Riviera, the belt of cst. between the mtns. of the shore of the G. of Genoa, N. Italy, from Spezia to Nice; picturesque scenery, sheltered, mild climate; fashionable health resort.
Riyadh, *t.*, Nejd, Saudi Arabia; p. about *150,000*.
Rizal, *prov.*, central Luzon, Philippine Is.; chiefly agr. a.; a. 791 sq. m.; p. *444,805*.
Rize, *t.*, Turkey; nr. Trabzon, on Black Sea; in I. of same name; p. (1945) *14,174*.
Rjukan, *t.*, Telemark, S. Norway; 35 m. N.W. of Notodden, impt. nitrate factories; p. *8,460*.
Road Town, *spt. cap.*, Tortala and Virgin Is.; p. (1946) *681*.
Roanne, *t.*, Loire, France; nr. St. Etienne; textile ind., cottons, woollens, silk; p. (1954) *46,501*.
Roanoke, *I.*, off cst. N.C., U.S.A.; 13 m. long.
Roanoke, *R.*, Va., and N.C., U.S.A.; flows into Albemarle Sound; length 230 m.
Roanoke, *t.*, Ala., U.S.A.; cotton mnfs., clothes; p. (1950) *5,392*.
Roanoke, *t.*, S.W. Va., U.S A.; on R. R.; iron wks.; p. (1950) *91,921*.
Roatan Is., Honduras, in G. of H.
Robin Hood's Bay, *picturesque inlet with fishing vil. on cst.*, N.R. Yorks, Eng.; nr. Whitby.
Robson, Mt., Alberta, Canada, 12,972 ft.
Roca, C. da, most W. point of estuary of R. Tagus, Portugal.
Rocafuerte, *t.*, W. Ecuador; coffee, sugar, sisal, indigo; p. *14,125*.
Roch, *R.*, Lancs, Eng.; rises in E. of Rossendale Fells, central Pennines, flows S.W. into R. Irwell nr. Bury; with R. Calder provides relatively easy route across Pennines from Leeds to Manchester; used by rail, road, canal; length approx. 20 m.
Rocha, *dep.*, Uruguay; a. 4,280 sq. m.; cap. Rocha; p. (1953) *86,334*.
Rochdale, *t.*, *co. bor.*, Lancs, Eng.; at S. foot of Rossendale Fells, on R. Roch; textiles, textile engin., rayon spinning, elec. engin.; co-operative movement started here, 1844; p. (1951) *87,734*.
Rochefort, *t.*, S. Belgium; p. *3,550*.
Rochefort, *fortfd. pt.*, Charente-Maritime, France; with arsenal and sm. cst. tr.; famous cheese; p. (1954) *30,858*.
Rochelle, La, *fortfd. spt.*, *cap.*, Charente-Maritime, France; on Bay of Biscay; shipbldg., chemical wks., fisheries; p. (1954) *58,799*.
Roches Point, E. side of Cork harbour, Co. Cork, Ireland.
Rochester, *c.*, *mun. bor.*, Kent, Eng.; on R. Medway, adjoining Chatham; cath., cas.; aeronautical, elec. and mechanical engin., paint, varnish; p. (1951) *43,899*.
Rochester, *c.*, Minn., U.S.A.; in grain-growing dist.; p. (1950) *29,885*.
Rochester, *t.*, N.H., U.S.A.; on Salmon Falls and Cocheco Rs.; boot factories; p. (1950) *13,776*.
Rochester, *c.*, N.Y., U.S.A.; on Genesee R.; univ.; hydro-elec. power; cameras, films, etc., optical instruments, thermometers; p. (1950) *332,488*.
Roche-sur-Yon, La, *t.*, Vendée, France; on R. Yon; cas.; called formerly Bourbon Napoleonville; p. (1954) *19,576*.
Rochford, *t.*, *rural dist.*, Essex, Eng.; 3 m. N. of Southend; p. (rural dist. 1951) *19,612*.
Rockall, *sm. I.*, N. Atl. Oc.; lies 200 m. W. of Outer Hebrides; forms highest part of submarine bank which forms good fishing-ground; uninhabited. Annexed by Britain, 1955.
Rockall Deep, *submarine trench*, N. Atl. Oc.; between N.W. Ireland and Rockall I.; depth exceeds 1,600 fathoms.
Rockaway, *bor.*, N.J., U.S.A.; iron founding and products; textiles, leather; p. (1950) *3,812*.
Rockaway Beach, *summer resort*, on sandbar of

Long I.; now incorporated with Queens, one of the 5 bors. of New York City, U.S.A.
Rockford, *c.*, Ill., U.S.A.; machin. and furniture mftg.; p. (1950) *92,927*.
Rockhampton, *c.*, Queensland, Australia; on R. Fitzroy; comm. cap. of Central Queensland. Has lgst. meat-preserving wks. in Commonwealth; mining; p. (1957) *42,900*.
Rock Hill, *c.*, S.C., U.S.A.; industl.; p. (1950) *24,502*.
Rockingham, *t.*, N.C., U.S.A.; cotton mnfs., paper, lumbering, peaches; p. (1950) *3,356*.
Rock Island, *c.*, Ill., U.S.A.; on R. Mississippi; lumbering, flour mills, glass, farm implements; elec. equipment; p. (1950) *48,710*.
Rockland, *c.*, *spt.*, Ma., U.S.A.; on Penobscot Bay; shipbldg., granite, quarrying; p. (1950) *9,234*.
Rockland, *t.*, Mass., U.S.A.; shoemkg., engin.; p. (1950) *8,960*.
Rock River, Wis., U.S.A.; trib. of the Mississippi; length 375 m.
Rockville, *c.*, Conn., U.S.A.; on Hockanum R.; silks, woollens; p. (1950) *8,016*.
Rocky Mount, *t.*, N.C., U.S.A.; p. (1950) *27,697*.
Rocky Mountains, *extensive chain*, N. America; extending along the W. portions of Canada and the U.S.A. from Alaska to Mexico; the highest accurately measured point in the U.S.A. system is Mt. Massive (14,418 ft.); other high peaks are Mt. Elbert (14,431 ft.), Blanca Peak (14,390 ft.), Mt. Harvard (14,399 ft.), La Plata Peak (14,340 ft.), and Mt. Uncompahgre (14,306 ft.). Mt. St. Elias, in Alaska, is computed to be 18,008 ft. high, and was long held to be the highest peak in N. America, but is now known to be surpassed by the adjacent Mt. Logan (19,850 ft.) and by Mt. Orizaba (18,701 ft.) in Mexico.
Rodas, *mun.*, Cuba; sugar; p. *21,288*.
Rödby, *t.*, Denmark; on S. cst. of Lolland; p. (1956) *10,572*.
Rodewisch, *t.*, Saxony, Germany; engin., textiles; p. *10,572*.
Rodez, *t.*, *cap.*, Aveyron, France; on R. Aveyron; cath.; woollens; p. (1954) *20,383*.
Rodosto, *see* **Tekirdag**.
Rodriguez, *I.*, British dependency of Mauritius, Indian Ocean; 350 m. N.E. of Mauritius; principal exp., cattle, beans, salt, fish and goats; 42 sq. m.; p. (estd. 1957) *16,535*.
Roebling, *t.*, N.J., U.S.A.; established by steel-cable mkg. company; p. (1950) *3,500*.
Roermond, *t.*, Limburg, Neth.; on R. Maas; minster; paper, beer, cloth; p. (1951) *22,887*.
Roeselare, *t.*, W. Flanders, Belgium; on R. Lys, nr. Courtrai, cotton, linen, lace; p. (estd. 1957) *34,575*.
Roes Welcome, channel between Southampton I. and N.W. Terr., Canada.
Rogaland, *co.*, Norway; a. 3,546 sq. m.; p. (1950) *211,408*.
Rogers, *t.*, Ark., U.S.A.; fruit, vegs.; tourists; p. (1950) *4,962*.
Rogerstone, *t.*, S. Monmouth, Eng., on R. Ebbw and 3 m. W. of Newport; aluminium; p. (1951) *4,453*.
Rohtak, *t.*, W.N.W. Delhi, India; mkt., cotton textiles; fortifications; p. (1941) *35,235*.
Rokko, *C.*, Honshu, Japan; jutting into Sea of Japan.
Roma, *t.*, Queensland, Australia; in agr. dist. nr. Mt. Horrible; site of oil-boring operations; p. (1947) *3,880*.
Roman, *t.*, Romania; on R. Moldava; cath.; p. *25,857*.
Romania, *rep.*, E. Europe; bounded by U.S.S.R., Hungary, Jugoslavia and Bulgaria, consisting of provs. of Oltena, Muntenia (Wallachia), Dobrogea (Dobruja), Moldova (Moldavia), S. Bucovina, Transylvania, Banat, Crisana and Maramures; plain drained by Danube and tribs. Prut, Siret, Dambovita, Oit Jiu; except Transylvania, mountainous, Carpathians, Transylvanian Alps; very warm summers, severe winters, rainfall moderate, chiefly in summer; agr., maize, wheat, barley, oats; sheep, cattle, pigs, horses; forests, timber; minerals, petroleum, natural gas, lignite, copper, salt; flour-milling, brewing, distilling, oil-refining; cap. Bucharest; a. 91,671 sq. m.; p. (1956) *17,489,794*.
Romans, *t.*, Drôme, France; on R. Isère; formerly seat of ancient abbey; p. (1954) *22,559*.
Romblon Is., *prov.*, of Philippine Is.; low, fertile; ch. crops, abaca and copra; gold, marble; a. 512 sq. m.; p. *99,367*.
Rome, *c.*, *cap.*, Italy; on R. Tiber, 15 m. from the sea; one of the most famous cities in the world; ctr. of the Roman Catholic Church and former cap. of the greatest st. in the ancient world; situated on the original "seven hills" of the old Roman metropolis, and in the valleys between, along the R.; contains the celebrated cath. ch. of St. Peter, in the Vatican City, many churches and palaces, the cas. of St. Angelo, and numerous monuments, besides a univ. and several notable institutions devoted to art and learning; was created cap. of mod. United Italy in 1871; mnfs. and tr.; p. (1953) *1,760,000*.
Rome, *c.*, Ga., U.S.A.; on Coosa R.; in cotton region; p. (1950) *29,615*
Rome, *c.*, N.Y., U.S.A.; on the Mohawk R.; dairying ctr.; p. (1950) *41,682*.
Romford *mkt. t.*, *mun. bor.*, Essex, Eng.; 12 m. E. of London; brewing, light inds.; p. (1951) *87,991*.
Romilly-sur-Seine, *t.*, Aube, France; nr. Troyes; textile factories; p. (1954) *13,731*.
Romney, *see* **New Romney**.
Romney Marsh, *coastal marsh*, Kent, Eng.; formed by blocking of R. Rother by shingle spit of Dungeness which extends from Rye to Hythe; now largely drained; pastures for special Romney Marsh breed of sheep; a. 50 sq. m.
Romney, *t.*, Ukrainian S.S.R.; petroleum; p. *25,174*.
Romsdal, Möre Og, *dist.* Norway; cap. Molde; a. 5,812 sq. m.; p. *181,089*.
Romsey and Stockbridge, *mkt. t.*, *rural dist.*, Hants, Eng.; on R. Test, 7 m. N.W. of Southampton; paper mkg., brewing; p. (rural dist. 1951) *26,790*.
Ronaldshay, N. and S., Is. of the Orkneys.
Roncesvalles, *mtn. pass.*, in the Pyrenees, Spain; 20 m. N.E. of Pamplona, Navarra; Charlemagne's army under Roland, who was slain, defeated here, 778.
Ronda, *t.*, Malaga, Spain; ancient Moorish t. 42 m. N. of Gibraltar; mnfs. chocolate, leather, fruit, wines; p. *26,170*.
Ronse, *see* **Renaix**.
Roodepoort, *t.*, Transvaal, S. Africa; p. (1946) *22,950*.
Roorkee, *t.*, Uttar Pradesh, India; p. *17,476*.
Roosevelt, *R.*, trib. of Madeira R., Brazil.
Roosevelt Dam, Arizona, U.S.A.; on R. Salt 130 m. above Phoenix on edge of Colorado Plateau; supplies irrigation for cultivation of 360 sq. m. in lower valley of R. Salt and upper valley of R. Gila; hydro-elec. power-sta.
Roper R., N.E. Northern Terr., Australia; navigable for about 90 m. inland.
Roquefort-sur-Soulzon, *t.*, S.E. Aveyron, France; caves in limestone cliffs used for ripening cheese.
Roraima, *mtn.*, Brit. Guiana, Venezuela bdy.; alt. 9,000 ft.
Röros, *t.*, Norway; on R. Glomma; p. *2,575*.
Rorschach, *t.*, Switzerland; lace; p. (1941) *10,967*.
Rosa Monte, highest pk., Pennine Alps, Italy; alt. 15,217 ft.
Rosario, *t.*, Santa Fé, Argentina; on R. Paraná; rly. terminus; sugar-refining, milling, brewing; p. (estd. 1954) *551,276*.
Rosas, *t.*, Spain; on Franco-Spanish border, opp. Portbou on the Mediterranean cst.
Roscommon, *inland co.*, Connaught, Ireland; a. 949 sq. m.; p. (1956) *63,675*.
Roscommon, *t.*, Roscommon, Ireland; 96 m. W. of Dublin; p. (1951) *2,013*.
Roscrea, *mkt. t.*, Tipperary and Offaly, Ireland; on Little Bransa R.; p. (1951) *2,988*.
Roseau, *t.*, Dominica, Windward Is.; p. (1957) *13,500*.
Roseburg, *t.*, S.W. Ore., U.S.A.; roses, fruit, poultry; canning, sawmills; p. (1950) *8,390*.
Roselle, *t.*, N.J., U.S.A.; p. (1950) *17,681*.
Rosendaal, *t.*, S.W. Neth.; nr. Arnhem; p. (1951) *31,889*.
Rosendal-Nispen, *industl. t.*, N. Brabant, Neth.; nr. Breda.
Rosenheim, *t.*, Bavaria, Germany; on R. Inn, 35 m. S.E. of Munich; famous for sulphur springs, impt. brine wks., machin., wood, iron,

textiles, brewing; rly. junction; p. (estd. 1954) *30,300*.
Rosetta (Rashid), *t.*, Lower Egypt; on W. distributary of R. Nile, 43 m. N.E. Alexandria; p. (1947) *28,698*.
Roseville, *t.*, E. Cal., U.S.A.; exp. fruit, wines; p. (1950) *8,723*.
Roskilde, *mkt. t.*, Denmark; 20 m. W. of Copenhagen; fine cath. containing tombs of Kings and Queens of D.; royal palace; p. *23,497*.

Ross and Cromarty, *cst. and Highland co.*, Scot.; total a. 3,202 sq. m.; ch. t. Dingwall; p. (1951) *60,503*.
Ross Dependency, Antarctica, N.Z.
Ross I., Victoria Land, Antarctica.
Ross Sea, *sea* extending to 85° S. in the Antarctic.
Rossan Pt., *headland*, N. side of Donegal Bay, Ireland.
Rossano, *c.*, Cosenza, S. Italy; nr. G. of Taranto; old t. under the Byzantium Empire; alabaster and marble quarries; silk, olive oil; p. *17,425*.
Rossendale Fells (Rossendale Forest), *upland region*, S.E. Lancs, Eng.; forms W. extension of Pennines between Mersey and Ribble valleys; composed of hard, impervious millstone grit; covered by boggy moorland; many reservoirs store soft water for cotton-spinning ts. along S. edge (Bolton, Bury, Rochdale), cotton-weaving ts. along N. edge (Blackburn, Accrington, Burnley) and sm. industl. ts. in Irwell valley within Rossendale; alt. mainly above 1,200 ft.
Rossland, *t.*, B.C., Canada; gold; p. *2,848*.
Rosslare, *spt.*, Wexford, Ireland; on extreme S.E. of Ireland; steamer connections to Fishguard (Wales).
Rostock, *spt.*, Mecklenburg, Germany; nr. mouth of R. Warnow; univ.; fisheries, machin., chemicals, shipbldg., iron, foodstuffs; p. (estd. 1954) *140,000*.
Rostov, *t.*, *pt.*, R.S.F.S.R.; on R. Don, 10 m. up from Sea of Azov (Black Sea); a gr. grain mart and comm. and industl. ctr.; engin., elec. power, paper; p. (1959) *597,000*.
Roswell, *t.*, N.M., U.S.A.; p. (1950) *25,738*.
Rosyth, *t.*, Fife, Scot.; naval dockyard.
Rothamsted, *hamlet*, Herts, Eng.; in Chiltern Hills, 1 m. S. of Harpenden; lge. agr. experimental sta.
Rother, *R.*, Sussex and Kent, Eng.; rises in the Weald, flows S.E. into English Channel at Rye; length 31 m.
Rother, *R.*, Hants and Sussex, Eng.; trib. of R. Arun; length 24 m.
Rother, *R.*, Derby and Yorks, Eng.; flows to R. Don at Rotherham; length 21 m.
Rotherham, *t.*, *co. bor.*, W.R. Yorks; on R. Don, 4 m. N.E. of Sheffield; iron, steel, coal, glass; p. (1951) *82,334*.
Rotherhithe, *S.E. Thames-side-dist.*, London, Eng.
Rothes, *burgh*, Moray, Scot.; on R. Spey, 12 m. S.E. of Elgin; p. (1951) *1,211*.
Rothesay, *burgh*, Bute, Scot.; on E. cst. of I. of Bute in Firth of Clyde; tourism; p. (1951) *10,145*.
Rothwell, *t.*, *urb. dist.*, Northants, Eng.; 3 m. N.W. of Kettering; boots, shoes; p. (1951) *4,617*.
Rothwell, *t.*, *urb. dist.*, W.R. Yorks, Eng.; on R. Aire, 3 m. S.E. of Leeds; mining; chemicals, bricks, tiles, copper tubes, stone and sand quarrying; p. (1951) *24,283*.
Rotondo, *mtn.*, Corsica, France.
Rotorua, *t.*, N.I., N.Z.; health resort; hot springs; p. (1951) *10,635*.
Rotterdam, *spt.*, *wealthy comm. c.*, Neth.; on R. Maas; linked to N. Sea at Hook of Holland by "New Waterway" ship canal; Europe's lgst. pt. second in world; breweries, sugar-ref., shipbldg., chemicals, clocks; p. (estd. 1955) *713,000*.
Rotti, *I.* (50 m. by 20 m.) off cst. of Timor, Malay Archipelago, Indonesia; p. *59,221*.
Roubaix, *t.*, Nord, France; nr. Lille; on the Roubaix canal 1 m. from the Belgian frontier; woollen mnfs., grape and tomato forcing; gr. tr., many educational institutions and fine bldgs.; p. (1954) *110,067*.
Rouen, *c.*, Seine-Maritime, France; over 50 m. up R. Seine; extensive cotton and woollen factories, magnificent cath. and church; silks, machin., shipbldg.; badly damaged Second World War; p. (1954) *116,540*.
Roulers, *see* **Roeselare.**
Roumania, *see* **Romania.**
Rourkela, *t.*, Orissa, India; steel, tinplate, iron.
Rousay, Orkney Is., Scotland.
Roussillon, *old prov.*, S. France; lies in depression at E. end of Pyrenees, in dep. of Pyrénées Orientales; largely irrigated by many sm. streams; olive, vine, wheat.
Rouyn, *mining t.*, Quebec, Canada; at end of L. Abitibi; gold, copper, zinc; p. *8,808*.
Rovereto, *c.*, S. Tyrol, Italy; on R. Adige; silk, leather, paper, cottons; p. *20,575*.
Rovigo, *prov.*, Venetia, Italy; cap. Rovigo; a. 684 sq. m.; p. (1951) *355,056*.
Rovigo, *t.*, *cap.*, Rovigo prov., Italy; on R. Adige, 20 m. S. of Padua; agr. mkt.; p. *39,954*.
Rovinj, *t.*, Istria, Jugoslavia; sardine fisheries; p. *10,150*.
Rowley Regis, *industl. t.*, *mun. bor.*, Staffs, Eng.; adjoins Dudley; p. (1951) *49,409*.
Roxboro', *t.*, N.C., U.S.A.; cotton, tobacco, mnfs.; p. (1950) *4,321*.
Roxburgh, *inland co.*, S. Scot.; stretching halfway along the Eng. border; hilly; sheep-rearing; woollens, tweed; cap. Jedburgh; a. 670 sq. m.; p. (1951) *45,562*.
Royal Leamington Spa, *see* **Leamington.**
Royal Oak, *t.*, Mich., U.S.A.; p. (1950) *46,898*.
Royan, *t.*, Charente-Maritime, France; S. of Rochelle; fishery, tr., industl.; p. (1954) *12,289*.
Royersford, *bor.*, S.E. Penns., U.S.A.; light iron and steel mnfs.; glass; p. (1950) *3,862*.
Royston, *mkt. t.*, *urb. dist.*, Herts, Eng.; at N. foot of E. Anglian Heights, 7 m. N.E. of Baldock; p. (1951) *4,663*.
Royston, *urb. dist.*, W.R. Yorks, Eng.; coal-mining; p. (1951) *8,137*.
Royton, *t.*, *urb. dist.*, Lancs, Eng.; 4 m. N.E. of Manchester; cotton spinning; p. (1951) *14,772*.
Roznava, *t.*, S. Czechoslovakia; W. of Košice; antimony; p *6,835*
Ruabon, *par.*, Denbigh, N. Wales; on Salop border; coal, iron, tile wks.; p. *3,333*.
Ruandi-Urundi, *terr.*, formerly in German E. Africa, now Belgian Trust Terr., united administratively with Belg. Congo; rich in cattle; cap. Usumburu; a 19,536 sq m.; p (1956) (African) *4,484,591*, (European) *6,486*.
Ruapehu, *highest mtn.*, N.I., N.Z.; volcanic peak at S. extremity of central volcanic dist.; alt. 9,175 ft.
Rubicon, *R.* of Central Italy, flowing to the Adriatic, crossed by Julius Cæsar and his armies in 49 B.C. Has been identified with the Fiumicino or the Uso. There is a R. Rubicon (It. Rubico) a few m. N. of Rimini and S. of Cervia.
Rubtsovsk, *t.*, W. Siberia, R.S.F.S.R.; p. (1959) *111,000*.
Ruby Mines, *dist.*, Mandalay, Upper Burma; hilly region of the Shan plateau, rich in precious stones; H.Q. t. Mogôk, in ctr. of the mining dist.
Rudolf, *L.*, Kenya, Brit. E. Africa; N.E. of L. Victoria; a. 3,500 sq. m.
Rudolph I., N. of Franz Josef Land, Arctic Ocean; Russian naval base; met. sta.
Rudolstadt, *t.*, Thuringia, Germany; on R. Saale; cas.; porcelain, metals; p. (estd. 1954) *23,200*.
Rueil, *t.*, Seine-et-Oise, France; nr. Paris; p. (1954) *32,212*.
Rufiji, *R.*, Tanganyika; Brit. E. Africa; flows to the Indian Ocean; length 450 m.
Rugby, *mkt. t.*, *mun. bor.*, Warwick, Eng.; on R. Avon, 9 m. E. of Coventry; famous Public School; elec. and gen. engin., motor and aircraft patterns; p. (1951) *45,418*.
Rugeley, *mkt. t.*, *urb. dist.*, Staffs, Eng.; on R. Trent, 9 m. S.E. of Stafford; coal, iron, tanning; p. (est. 1958) *12,000*.
Ruhr, *industl. dist.*, W. Germany; lies to E. of R. Rhine, on either side of R. Ruhr; rich coalfield; impt. iron and steel, heavy engin. inds. based on local coal and iron ore from Luxembourg, Spain, Sweden; water communications to N. Sea along R. Rhine and Dortmund–Ems Canal; ch. ts. Essen, Duisburg, Düsseldorf, Dortmund, Bochum.
Ruislip-Northwood, *urb. dist.*, Middlesex, Eng.; residtl.; p. (1951) *68,274*.
Rukwa, *L.*, Brit. E. Africa; between L. Tanganyika and L. Nyasa in the rift valley; 30 m. by 12 m., a. increasing.
Rum, *I.*, Inner Hebrides, Argyll, Scot.; 8½ m. by 8 m.
Rumaila, Iraq; oilfield; pipe-line links to the Zubair–Fao system.
Rumania, *see* **Romania.**

Rumburk, *t.*, N. Bohemia, Czechoslovakia; pottery, textiles; p. *10,466*.
Rum Jungle, N. Terr., Australia; 70 m. S.E. of Darwin; impt. uranium mines.
Runcorn, *industl. t.*, *urb. dist.*, Cheshire, Eng.; on S. side of Mersey estuary; connected by the Ship Canal with Manchester; transporter bridge to Widnes; chemicals, tanning; p. (1951) *23,933*.
Rupert, *R.*, Canada; flows from L. Mistassini to James Bay; length 300 m.
Ruschuk, *see* **Ruse**.
Ruse, *t.*, Bulgaria; on R. Danube, opp. Giurgiu in Romania; univ., arsenal, barracks; beer, sugar, tobacco; p. (1956) *83,472*.
Rushden, *t.*, *urb. dist.*, Northants, Eng.; 3 m. E. of Wellingborough; shoes; p. (1951) *16,321*.
Rusholme, *t.*, E. of Manchester, S.E. Lancs, Eng.; industl. and residtl.
Rushville, *t.*, Ind., U.S.A.; p. (1950) *6,761*.
Russell, *t.*, Kan., U.S.A.; mkt. in agr. and cattle region, oil and gas fields; p. (1950) *6,483*.
Rüsselsheim, *t.*, Hessen, Germany; on R. Main, E. of Mainz; car mftg. (Opel); p. (estd. 1954) *22,900*.
Russian Soviet Federal Socialist Republic (R.S.F.S.R.) *ch. constituent rep.*, U.S.S.R.; ch. inds.: wheat, rye, oats, barley, potatoes, sugar-beet, fruits, sunflower, cotton, hemp, tobacco; sheep, cattle, dairying, pigs, horses; lumbering, timber, wood-pulp; coal, petroleum, iron, manganese, etc.; machin., textiles, oil-refining, cement, bricks; a. 6,310,594 sq. m.; cap. Moscow; p. (1959) *117,494,000*.
Rustavi, *t.*, Georgian S.S.R., New Town 20 m. S.E. Tbilisi; p. (1959) *62,000*.
Rustenburg, *t.*, Transvaal, Union of S. Africa; on N.W. edge of High Veld (alt. over 4,000 ft.) 60 m. W. of Pretoria; local mkt. for agr. produce, sorghum, maize, cotton.
Rutbah, *t.*, Iraq; on oil pipe-line from Iraq to Haifa.
Rute, *t.*, Cordova, Spain; nr. Lucerna; industl.; p. *18,903*.
Ruthenia, *dist.*, U.S.S.R.; formerly part of Romania, ceded to U.S.S.R. in 1945, now part of Ukrainian S.S.R.
Rutherford, *t.*, N.J., U.S.A.; p. (1950) *17,411*.
Rutherfordton, *t.*, N.C., U.S.A.; gold, lumber, textiles; agr.; p. (1950) *3,146*.
Rutherglen, *burgh*, Lanark, Scot.; on R. Clyde, S.E. of Glasgow; industl., chemicals, tubes, paper, wire ropes, bolts, chenilles, webbing; p. (1951) *24,225*.
Ruthin, *t.*, *mun. bor.*, Denbigh, Wales; in Vale of Clwyd, 8 m. S.E. of Denbigh; mkt.; p. (1951) *3,599*.
Rutigliano, *t.*, Bari, Italy; agr. interests; p. *10,650*.
Rutland, *midland co.*, Eng.; smallest in cty.; agr. farming, livestock; cheese, stone, iron; a. 152 sq. m., cap. Oakham; p. (1951) *20,510*.
Rutland, *c.*, Vt., U.S.A.; marble quarries, machin. and furniture; p. (1950) *17,659*.
Ruvo, *t.*, Bari, Italy; cath.; olive-oil presses; p. *25,225*.
Ruwenzori, **Mt.**, on bdy. between Uganda Prot. and Belgian Congo, Central Africa; overlooks W. arm of Gr. African Rift Valley midway between L. Albert and L. Edward; lower slopes covered in equatorial rain forest, coffee plantations on middle slopes above 5,000 ft.; alt. 16,790 ft.
Ryan Loch, *arm of sea*, on cst. Wigtown, Scot.; 8 m. by 2 m.
Ryazan, *t.*, R.S.F.S.R.; S.E. of Moscow; distilling, leather, engin.; p. (1959) *213,000*.
Rybinsk, *see* **Shcherbakov**.
Rybinsk Sea (Rybinsk Reservoir), R.S.F.S.R.; artificial L.; created behind dams on R. Volga and R. Sheksna at Rybinsk; part of scheme to regulate flow of R. Volga and to incorporate it in a vast inland waterway system; opened 1945; approx. a. 1,500 sq. m.
Rybnik, *t.*, S.W. Poland; engin., brewing, furniture-mkg.; p. *23,052*.
Rybnitz, *region*, Moldavian S.S.R.
Rydal Water, *L.*, nr. Ambleside, Westmorland, Eng.; vil. adjacent contains Rydal Mount, where Wordsworth lived.
Ryde, *t.*, *mun. bor.*, I. of Wight, Eng.; on N.E. cst.; yachting ctr. and seaside resort; boat and yacht bldg.; steamer connection across Spithead to Portsmouth; p. (1951) *20,084*.
Rye, *t.*, *mun. bor.*, *Cinque Pt.*, E. Sussex, Eng.; at mouth of R. Rother to W. of Dungeness; shipbldg. and fishing; p. (1951) *4,511*.
Ryton, *t.*, *urb. dist.*, Durham, Eng.; on R. Tyne W. of Newcastle; ironwks.; p. (1951) *13,779*.
Ryuku Archipelago, *gr.* of 89 Is., S. of Kyushu, Japan, under U.S.A. control; total a. 921 sq. m.; consisting of Okinawa, Amami, Tokara and others; ch. t. Naha on Okinawa; p. (1956) *807,400*.
Rzeszow, *prov.*, S.E. Poland; a. 7,110 sq. m.; agr.; p. (estd. 1950) *1,383,460*, cap. R.; p. *29,400*.
Rzeszow, *t.*, S.E. Poland; industl. development since 1950; p. (1957) *58,000*.
Rzhev, *t.*, R.S.F.S.R.; on R. Volga; industl. and comm. engin.; p. (1954) *60,000*.

S

Saale, *R.*, Thuringia and Saxony, Germany; trib. of R. Elbe; length 225 m.
Saalfeld, *t.*, Thuringia, Germany; on R. Saale; famous cas. and grottos; machin., chocolate mftg.; p. (estd. 1954) *27,100*.
Saane, *R.*, Switzerland; flows to R. Aar, nr. Berne; length 65 m.
Saar, *R.*, Lorraine, Saarland, Palatinate; rises in the Vosges and flows N.W. to R. Moselle, nr. Trier; length 153 m.
Saar, *st.*, W. Europe; in valley of Saar; administered by League of Nations 1919–35 and returned to Germany after plebiscite; economic attachment of Saar to France agreed upon by Allied powers after Second World War; reunited politically with German Federal Republic 1 Jan. 1957 as a Länd. Impt. coalfields, iron; ch. t. Saarbrucken; p. (1951) *955,413*.
Saarbrücken, *cap.*, Saarland, on R. Saar, opposite sister t. of Sanct, Johann; cas.; rich coalfield; iron and steel wks., textiles, leather, paper; p. (estd. 1954) *111,600*.
Saarebourg, *t.*, Moselle, France; on R. Saar, 30 m. N.W. of Strasbourg; mnfs. gloves, watch springs; p. (1954) *10,439*.
Saare Maa (Ösel), *I.*, Baltic Sea; at entrance to G. of Riga, Estonian S.S.R., U.S.S.R.; consists of low plateau, bleak and barren; ch. t., Kuresaare; a. approx. 900 sq. m.
Saarlouis, *t.*, Saarland, Germany; on R. Saar; coal-mng., wood, metals; p. (estd. 1954) *31,300*.
Saba, *I.*, Neth. Antilles, W. Indies; a. 4 sq. m.; p. (1948) *1,150*.
Sabac, *t.*, Jugoslavia; on R. Sava; old cas.; products; fruit, cattle, pigs, coal; p. *18,238*.
Sabadell, *t.*, Spain; N.W. of Barcelona; linen and cloth mills, flour, paper, distilling, iron founding; p. (1950) *59,494*.
Sabang, *spt.*, Sumatra, Indonesia; bunkering sta.; p. *6,855*.
Sabara, *t.*, Minas Gerais, Brazil; iron and steel; p. *7,684*.
Sabinas, *sm. t.*, Nuevo León st., Mexico; at foot of Sierra Madre Oriental, 15 m. N. of Monterrey; coal-mines.
Sabine, *R.*, Texas and La., U.S.A.; flows through S. Lake (an expansion of the R. 18 m. long) to Gulf of Mexico; length 500 m.
Sable Cape, *S. point*, Fla., U.S.A.
Sable I., off S.E. cst., Nova Scotia; 45 m. long.
Sackville, *t.*, N.B., Canada; agr. ctr.; mnfs., harness mkg., stoves, furnaces; p. *2,489*.
Saco, *c.*, Me., U.S.A.; cotton mnfs.; p. (1950) *10,324*.
Saco, *R.*, U.S.A.; flows from White Mtns. in New Hampshire to Saco B., Mne.; 160 m. long.
Sacramento, *c.*, *cap.*, Cal., U.S.A.; on the R. Sacramento; Capitol and R.C. cath.; rail wkshps., furniture, pottery, smelting, meat and fruit packing, flour; p. (1950) *137,572*.
Sacramento, *R.*, Cal., U.S.A.; flows to San Francisco Bay; length 500 m.
Sacz, *see* **Nowy Sacz**.
Sadani, *spt.*, Tanganyika, Brit. E. Africa; at mouth of R. Wami; p. *2,000*.
Saddleback (Blencathara), *mtn.*, Cumberland, Eng.; nr. Keswick; alt. 2,847 ft.
Saddleworth, *t.*, *urb. dist.*, W.R. Yorks, Eng.; in Pennines, 5 m. N.E. of Oldham; woollen, paper mkg., engin.; p. (1951) *16,762*.
Sado, *I.*, off cst. of Honshu, Japan; gold and silver mines; rice, fishing; a. 331 sq. m.
Sadon, *t.*, R.S.F.S.R.; zinc, lead, lead smelting.

Safad, *t.*, N. of Sea of Galilee, Israel; p. *11,300*
Saffron Walden, *mkt. t., mun. bor.*, Essex, Eng.; on E. Anglian Heights, 12 m. N. of Bishops Stortford; agr., horticulture and engin.; p. (1951) *6,825*.
Safi, *spt.*, W. cst. Morocco; summer health resort; poor harbour, gr. grain and wool tr.; phosphates; fishing; p. (1946) *50,845*.
Saga, *t.*, Kyushu, Japan; coal-mining, fishing; p. *8,455*.
Sagaing, *div.*, Upper Burma; mtn. ridges, fertile plains; rice, wheat, peas, cotton; a. 50,086 sq. m.; p. *2,322,675*.
Sagaing, *t.*, Upper Burma; on R. Irrawaddy; pagodas; groundnuts, cotton, millets, tobacco, cattle; p. *14,127*.
Sagan, *see* **Zagan.**
Saganoseki, *sm. t.*, N.E. Kyushu, Japan; on Bungo Strait, 15 m. E. of Oita; impt. gold-, copper-, silver-mines.
Sagastyr, *I.*, at mouth of R. Lena, R.S.F.S.R.
Saginaw, *c.*, Mich., U.S.A.; on R. Saginaw; in agr. and timber region; machin., railwks., beet-sugar; p. (1950) *92,918*.
Sagua la Grande, *t.*, Cuba; on R. of same name; p. *15,539*.
Saguenay, *R.*, Quebec, Canada; length from L. St. John to St. Lawrence R. about 100 m.; of gr. depth, beautiful scenery; hydro-elec. power developed.
Sagunto, *t.*, Spain; nr. Valencia; p. *20,253*.
Sahara, the gr. N. African desert between the Sudan and the Barbary sts., extending from the Atlantic to the Nile, inc. Tripoli and Fezzan; a. 3,500,000 sq. m.; the E. portion is known as the Libyan desert, that part E. of the R. Nile, being often called the Nubian Desert; numerous oases with ts. and tr. ctrs.; p. (estd. *2,500,000*), nomadic Arab and Berber tribes.
Saharan Atlas, S. range of Atlas mtns. in Algieria; ch. pks., J. Aures, 7,644 ft., J. Aissa, 7,350 ft., J. Ksel, 6,594 ft.
Saharan Oases, *terr.*, S. Algeria; p. *39,575*.
Saharanpur, *c.*, Uttar Pradesh, India; rly. wks., wood carving; furniture, paper, tobacco, mnfs.; p. (1951) *148,435*.
Sahibganj, *t.*, Bihar, India; on R. Ganges.
Saida, *see* **Sidon.**
Saidabad or **Sirdjan,** *t.*, Laristan, Persia; S.W. of Kerman, nr. Kuh-i-Lalehzar mtn.; p. *10,000*.
Saigon, *c., spt.*, S. Viet-Nam; on R. Saigon, to E. of Mekong delta, 60 m. from sea; lge. comm. ctr.; cath., citadel, arsenal and naval yd.; spices, rice; p. (1958) *1,799,175* (with Cholon).
Saimaa, *L.*, Finland; N. of Viborg; a. 150 sq. m.; outlet into L. Ladoga.
St. Abb's Head, *rocky promontory*, Berwick, Scot.
St. Agnes Head, Cornwall, Eng.
St. Albans, *c., mun. bor.*, Herts, Eng.; on N. margin of Vale of St. Albans, 20 m. N.W. of London; faces remains of Roman Verulamium across R. Ver; light inds., electronics, instrument mkg.; cath.; residtl.; p. (1951) *44,106*.
St. Albans, *t.*, Vt., U.S.A.; dairy farming; p. (1950) *8,552*.
St. Amand, *t.*, Cher., France; on R. Cher; industl.; p. (1954) *10,765*.
St. Andrews, *burgh*, Fife, Scot.; on N.E. cst. of Fife; seaside resort; univ.; famous golf course; p. (1951) *9,459*.
St. Anne, *t.*, Alderney, Channel Is.; church designed by Sir George Gilbert Scott.
St. Anthony, *waterfalls*, on R. Mississippi; U.S.A. predominant factor in site of Minneapolis (Minn.).
St. Arnaud, *t.*, Victoria, Australia; p. *2,900*.
St. Asaph, *c., rural dist.*, Flint, N. Wales; on R. Clwyd, 4 m. N. of Denbigh; cath.; optical glass mkg.; p. (rural dist. 1951) *9,858*.
St. Augustine, *t.*, Fla., U.S.A.; resort; p. (1950) *13,555*.
St. Austell, *mkt. t., urb. dist.*, Cornwall, Eng.; on S. flank of Hensbarrow, 14 m. N.E. of Truro; holiday resort; china clay, stone quarrying, engin., wood and cork; p. (1951) *23,634*.
St. Barthélemy, *French I.*, W. Indies; dependency of Guadeloupe; p. (1946) *2,231*.
St. Bees Head, *promontory*, 2½ m. N.W. of St. Bees, Cumberland, Eng.; freestone quarries, tin.
St. Benoît, *t.*, Ile de la Réunion, Indian Ocean; connected by rail with ch. port, Pointe-des-Galets.
St. Bernard Pass, Great, on Italian–Swiss bdy., W. Alps; carries main road from W. Switzerland to Plain of Lombardy; approached from N. by trib. of upper Rhône, from S. by Val d'Aosta; alt. over 7,000 ft.
St. Bernard Pass, Little, on French–Italian bdy., W. Alps.; links Isère valley with Val d'Aosta; alt. approx. 5,000 ft.
St. Boniface, *t.*, Manitoba, Canada; sub. of Winnipeg; p. (1956) *28,851*.
St. Boswells, *par.*, Roxburgh, Scot.; p. *3,466*.
St. Bride's Bay, at W. extremity, Pembroke, Wales.
St. Brieuc, *t.*, Côtes-du-Nord, France; college, cath.; ironwks., textiles, timber and cst. tr.; p. (1954) *37,670*.
St. Buryan, *par.*, Cornwall, Eng.; lobster and crab fishing; p. *1,132*.
St. Catherine's, *c.*, Ont., Canada; on Welland Canal; mkt. for Niagara fruit-growing reg.; agr. implement wks., timber mills, flour mills, tanneries and varied inds.; p. (1946) *30,275*.
St. Chamond, *t.*, Loire, France; nr. St. Etienne; silk, ribbons, rayon; rly. wks.; coal-mining; p. (1954) *15,580*.
St. Charles, *c.*, Mo., U.S.A.; nr. St. Louis; tobacco and flour; p. (1950) *14,314*.
St. Clair, *t.*, Penns., U.S.A.; industl.; p. (1950) *5,856*.
St. Clair, *L.*, Canada–U.S.A.; part of link between L. Huron and L. Erie.
St. Clair, *R.*, N. America; flows from L. Huron through L. of St. Clair into L. Erie; forms bdy. between Michigan (U.S.A.) and Ontario (Canada); impt. link in Gr. Lakes waterway; length 85 m., depth dredged to 20 ft.
St. Claude, *t.*, Jura, France; at confluence of Rs. Tacon and Bienne; cath.; fancy shell, horn and ivory mnfs.; p. (1954) *11,301*.
St. Cloud, *t.*, Seine-et-Oise, France; 6 m. from ctr. of Paris; fine park, château; residtl.; porcelain; p. (1954) *20,671*.
St. Cloud, *t.*, Minn., U.S.A.; on R. Mississippi; timber yards, dairying, farming; p. (1950) *28,410*.
St. Croix, *I.*, Virgin Is., gr., U.S.A.; ch. inds. sugar cultivation, stock raising, vegetable growing, rum mnf.; a. 82 sq. m.; p. (1950) *12,096*.
St. Croix, *R.*, Wis., U.S.A.; trib. of the Mississippi; length 200 m.
St. Davids, *c.*, Pembroke, Wales; 15 m. S.W. of Fishguard; cath., ruins of Bishop's Palace; p. *1,595*.
St. Davids Head, *promontory*, on cst. of Pembroke, Wales.

Sarreguemines, *t.*, Moselle, France; 7 m. S.E. of Saarbrücken; porcelain, plush leather, matches; p. (1954) *14,947*.
Sarria, *t.*, Lugo, Spain; p. *15,167*.
Sarthe, *dep.*, N.W. France; undulating surface; farming, apples, livestock; coal, linen, potteries; cap. Le Mans; a. 2,412 sq. m.; p. (1954) *420,393*.
Sarthe, *R.*, France; trib. of R. Loire; l. 165 m.
Sarzana, *t.*, Liguria, Italy; nr. Spezia; cath.; silks; p. *13,650*.
Sasebo, *spt.*, Kyushu, Japan; p. (1950) *194,453*.
Saseno I., *see* Sazan.
Saskatchewan, *prov.*, Canada; coniferous forests and plains; Rs. Saskatchewan and Churchill; many lge. Ls.; extreme climate; good rail communications; hydro-elec. power; gr. wheat prov.; livestock, dairying; coal, copper, furs, fisheries; cap. Regina; a. 251,700 sq. m.; p. (1956) *880,665*.
Saskatchewan, *R.*, Canada; flows from Rocky mtns. through L. Winnipeg and thence by R. Nelson to Hudson Bay; length 1,450 m.
Saskatoon, *c.*, Saskatchewan, Canada; univ.; flour, cement; p. (1956) *72,858*.
Sasovo, *t.*, R.S.F.S.R.; wood inds.; p. *10,000*.
Sassari, *t.*, Sardinia, Italy; nr. G. of Asinara; cath., univ., palaces; tobacco and macaroni wks.; oil, grain; p. (1951) *70,243*.
Satara, *t.*, Bombay, India; p. (1941) *36,405*.
Satu-Mare, *t.*, N.W. Romania; pottery, textiles; p. *56,313*.
Saudi Arabia, *lgst. kingdom*, peninsula of Arabia; formerly kingdom of Hejaz (cap. Mecca) and Nejd (cap. Riyadh); mainly desert; nomadic pop.; Mohammedanism; dates, wheat, barley; impt. oil concessions; p. (approx.) *2,000,000*.
Sauerland, *dist.*, *Land*, N. Rhine–Westphalia, W. Germany; plateau, alt. from 500 to 1,500 ft., E. of Rhine and between valleys of Sieg and Ruhr; agriculturally poor, largely forested; crossed by R. Wupper, with which are associated industl. ts. Wuppertal (textiles), Solingen and Remscheid (cutlery and special steel).
Saugor, *t.*, Madhya Pradesh, India; univ.; p. (1941) *63,933*.
Sault Ste. Marie, *c.*, Mich., U.S.A.; on L. Superior at rapids; flour, woollens, locomotives; p. (1950) *17,912*.
Sault Ste. Marie, *c.*, Ontario, Canada; on L. Superior at rapids; pulp, paper, iron, steel; p. (1941) *25,794*.
Saulte Ste. Marie Canals ("Soo"), Canada and U.S.A.; twin canals on Canadian and American side of shallow channel linking L. Superior and L. Huron; traversed by all wheat and iron-ore traffic from L. Superior pts.; length (Canadian) 1 m.; depth 18 ft.
Saumur, *t.*, Maine-et-Loire, France; on R. Loire, 30 m. S.W. of Tours; wines, enamels, tinware; p. (1954) *18,169*.
Saurashtra, *former st.*, India; now absorbed into Bombay st.; total a. 21,062 sq. m.; p. (1951) *4,136,005*.
Sava or Save, *R.*, N. Jugoslavia; trib. of Danube; [length 550 m.
Savage or Niue, Cook Is., Pac. Oc.; under N.Z.; ch. exp. native plaited ware, bananas, copra, and sweet potatoes; ch. pt. Alofi; a. 100 sq. m.; p. (1948) *4,318*.
Savaii I., *lgst. of Samoan gr.*, Pac. Oc.; a. 703 sq. m.
Savannah, *c.*, *spt.*, Ga., U.S.A.; turpentine, manure, soap, timber; p. (1950) *119,638*.
Savannah, *R.*, U.S.A.; flows between Ga. and S.C., to Atl. Oc.; length 450 m.
Save, *R.*, France; trib. of R. Garonne; length 65 m.
Saverne, Col de, *low pass*, N.E. France; carries trunk rly. from Paris to Strasbourg and the Orient between Vosges and Hardt Mtns.; gradual approach from W., steep descent to E. into Rhine valley.
Savigliano, *t.*, Piedmont, Italy; silk; p. *18,725*.
Savoie or Savoy, *dep.*, S.E. France; on Italian border; mountainous; mineral springs, pastoral, dairying; cap. Chambéry; a. 2,389 sq. m.; p. (1954) *252,192*.
Savoie (Haute), *dep.*, France; mountainous; farming, wine, cheese; cap. Annecy; a. 1,774 sq. m.; p. (1954) *293,852*.
Savona, *spt.*, Genoa, Italy; cath.; iron, shipbldg., glass and tinplate wks.; exp. preserved fruits and tomatoes; p. (1951) *68,698*.
Sawbridgeworth, *t.*, *urb. dist.*, Herts, Eng.; on R. Stort, 4 m. S. of Bishops Stortford; malting, fruit preserving; p. (1951) *3,692*.
Saxmundham, *mkt. t.*, *urb. dist.*, Suffolk, Eng.; 18 m. N.E. of Ipswich; p. (1951) *1,438*.
Saxony, *Land*, Germany, Soviet Zone; farming, printing, type-founding, toys, textiles, lace, spirits, beer, coal, iron, mineral springs; ch. ts. Dresden, Leipzig, Chemnitz; a. 6,640 sq. m.; p. *5,543,400*.
Saxony-Anhalt, *Land*, Germany, Soviet zone; a. 9,480 sq. m.; p. *4,162,100*.
Sayan Mtns., *range of mtns.*, between Rs. Yenisei and Angra, R.S.F.S.R.
Sayre, *t.*, Penns., U.S.A.; on R. Susquehanna; p. (1950) *7,735*.
Sazan, *I.*, Adriatic Sea; off cst. of Albania; restored to Albania by Italy.
Scafell Pike, *mtn.*, Cumberland, Eng.; in N. Pennines; highest in Eng.; alt. 3,210 ft.
Scalby, *t.*, *urb. dist.*, N.R. Yorks, Eng.; 3 m. N.W. of Scarborough; p. (1951) *6,225*.
Scalpay, *I.*, Skye, Scot.
Scandinavia, *region*, N. Europe, comprising Sweden, Norway and Denmark.
Scania, *see* Skåne.
Scapa Flow, *strait*, N. Scot.; between Pomona and Hoy, Orkney Is., surrendered German fleet scuttled, 1919.
Scarba, *I.*, Argyll, Scot.; off N. end of Jura.
Scarborough, *t.*, *mun. bor.*, N.R. Yorks, Eng.; on E. cst. 18 m. N.W. of Flamborough Head; seaside resort; p. (1951) *43,983*.
Scarpanto, *Greek I.*, E. Mediterranean; between Rhodes and Crete, one of the Dodecanese; p. *8,747*.
Schaan-Vaduz, *t.*, Liechtenstein; point where Arlberg Express (Paris–Vienna) passes through the principality.
Schaffhausen, *most N. can.*, Switzerland; on R. Rhine; pastoral and afforested; cap. Schaffhausen; p. (1951) *57,515*.
Schaffhausen, *t.*, cap. Schaffhausen can., Switzerland; on the Rhine; cath., cas.; famous falls, iron, steel, aluminium, cottons, brewing, distilling; p. (1941) *22,498*.
Schaumburg-Lippe, *former st.*, between provs. of Hanover and Westphalia, Germany, now part of Lower Saxony; farming; coal-mining; cap. Bückeburg.
Schelde (Scheldt), *R.*, France, Neth. and Belgium; rises in Aisne, France, flows to N. Sea; length 248 m.
Schenectady, *c.*, N.Y. U.S.A.; foundries, wireless-transmitting apparatus, locomotive; synthetic diamonds; p. (1950) *91,785*.
Scheveningen, *seaside resort*, Neth.; 2 m. N.W. of the Hague; fishing.
Schiedam, *t.*, Neth.; N.W. of Rotterdam; liquors, candles, yeast; p. (estd. 1955) *76,000*.
Schiehallion, *mtn.*, Perth, Scot.; alt. 3,547 ft.
Schiltigheim, *t.*, Bas-Rhin, France; machin., factory equipment; p. (1954) *22,798*.
Schlei, *narrow inlet* of Baltic, Schleswig-Holstein, Germany; 25 m. long.
Schleswig, *c.*, *pt.*, Schleswig-Holstein, Germany; cath., cas.; rope wks., tanning, freighting; p. (estd. 1954) *37,800*.
Schleswig-Holstein, *Land*, N. Germany; retroceded from Denmark 1920; cap. Kiel; moors and plain farming, livestock; textiles, tobacco; a. 6,048 sq. m.; p. (1950) *2,594,648*.
Schlettstadt, *see* Sélestat.
Schneidemühl, *see* Pila.
Schönebeck, *t.*, Saxony–Anhalt, Germany; on

R. Elbe; metals, chemicals, brewing; p. (estd. 1954) *46,700*.
Schouten I., New Guinea, Indonesia; in Greelvink Bay; p. *25,487*.
Schouwen I., Zeeland, Neth.; in N. Sea.
Schuylkill R., Penns., U.S.A.; flows into Delaware R.; length 130 m.
Schuylkill Haven, *t.*, Penns., U.S.A.; on Schuylkill R.; p. (1950) *6,597*.
Schwabach, *t.*, Bavaria, Germany; S. of Nürnberg; metal inds.; p. (estd. 1954) *20,100*.
Schwäbisch-Gmünd, *c.*, Baden–Württemberg, Germany; E. of Stuttgart; cath.; clocks, metal, glass and optical inds.; p. (estd. 1954) *34,100*.
Schwarzwald (Black Forest), *forest belt, Land* Baden-Württemberg, W. Germany; a. 1,844 sq. m.; highest peak Feldberg, alt. 4,900 ft.
Schweidnitz, *see* **Swidnica.**
Schweinfurt, *t.*, Bavaria, Germany; on R. Main, N.E. of Würzburg; metals, machin., dyes, brewing; p. (estd. 1954) *48,200*.
Schweizer Reneke, *t.*, Transvaal, S. Africa; irrigation; p. *2,252*.
Schwelm, *t.*, N. Rhine–Westphalia, Germany; E. of Wuppertal; metals, machin., textiles paper; p. (estd. 1954) *29,700*
Schwenningen, *t.*, Baden–Württemberg, Germany; clocks, metals, footwear; p. (estd. 1954) *25,100*.
Schwerin, *cap.*, *Land* Mecklenberg, Germany; industl. and educational; cath., palace; pianos, furniture, soap, bricks; p. *55,692*.
Schwerte, *t.*, N. Rhine–Westphalia, Germany; nr. Hagen; nickel wks.
Schwyz, *forest can.*, Switzerland; cap. Schwyz; a. 350 sq. m.; p. (1950) *71,082*.

Sciacca, *spt.*, Sicily, Italy; nr. Agrigento; cath.; H.Q. of Mediterranean coral fishery; sardines, olives; mineral springs; p. approx. *25,000*.
Scilla, *promontory*, Strait of Messina, Calabria, Italy.
Scilly Is., *gr.*, 30 m. S.W. of Land's End, Cornwall, Eng.; total a. 10 sq. m.; lgst. I., St. Marys; cap. Hugh Town; flowers, vegetables; p. *1,828*.
Scioto, *R.*, Ohio, U.S.A.; joins Ohio at Portsmouth; length 250 m.
Scone, *par.*, Perth, Scot.; place of residence and coronation of early Scottish kings; from here Edward I. removed the Stone of Destiny to Westminster Abbey in 1297; tourist ctr.; civil aerodrome.
Scotland, Brit. Is.; N. part of Gr. Britain; contains 33 cos.; home affairs administered by Dep. of Secretary of State for Scot.; physically divided into Highlands (many islands on W.), Middle Lowlands and S. Uplands; highest peaks, Ben Nevis 4,406 ft. and Ben Macdhui 4,296 ft.; ch. Ls., L. Lomond, L. Ness; ch. Rs., Clyde, Tweed, Tay, Spey, Dee, Forth; climate, maritime; agr. in E., grazing in W.; oats, barley, wheat, potatoes, fruit; coal, iron, oil-shale, granite; fisheries; mnfs., textiles, shipbldg.; machin., distilling, sugar-refining, printing; cap. Edinburgh; Glasgow, ch. comm. and industl. t.; a. 29,796 sq. m.; p. (1951) *5,095,969*.
Scranton, *c.*, Penns., U.S.A.; on R. Susquehanna; anthracite, iron foundries, steel wks., locomotives, and silk mnfs.; p. (1950) *125,536*.
Scunthorpe, *t.*, *mun. bor.*, Lindsey, Lincs, Eng., on Lincoln Edge, 6 m. S. of the Humber; iron-mng. and smelting, steel girders, engin., chemicals, tar distillation; p. (1951) *54,245*.
Scutari (Albania), *see* **Shkodra.**
Scutari (Turkey), *see* **Usküdar.**
Scutari L., *see* **Shkodra L.**
Seaford, *t.*, *urb. dist.*, E. Sussex, Eng.; 3 m. E. of Newhaven; seaside resort; p. (1951) *9,023*.
Seaforth Loch, Lewis, Outer Hebrides, Scot.; 14 m. long.
Seaham, *spt.*, *urb. dist.*, Durham, Eng.; Seaham Harbour, on E. cst. 4 m. S. of Sunderland; modern colly. workings, extending under sea; p. (1951) *26,138*.
Seathwaite, *vil.*, N. Lancs, Eng.; on R. Duddon on S. fringe of English Lake Dist.; highest average annual rainfall recorded in Brit. Is., 130 in.
Seaton, *t.*, *urb. dist.*, S. Devon, Eng.; on Lyme Bay at mouth of R. Axe; seaside resort; freestone quarries; p. (1951) *2,903*.
Seaton Valley, *t.*, *urb. dist.*, Northumberland, Eng.; nr. Blyth; coal-mining; p. (1951) *26,435*.
Seattle, *spt.*, Wash., U.S.A.; univ., cath.; shipbldg., aeroplanes, glass, fish-canning, fishing and whaling, packing, lumbering, coal; p.(1950) *467,591*.
Sebenico, *see* **Sibenik.**
Sebnitz, *t.*, Germany; E. of Dresden; p. *12,614*.
Secunderabad, Hyderabad, India; military sta.; p. *100,000*.
Sedalia, *c.*, Mo., U.S.A.; farming, meat-packing; machin., textiles, coal; rly. ctr. and wks.; p. (1950) *20,354*.
Sedan, *t.*, Ardennes, France; on R. Meuse; formerly a strong fortress; battle 1870, resulting in complete defeat of France; weaving; machin., metal ware, woollens, flour; p. (1954) *17,637*.
Sedgefield, *t.*, Durham, Eng.; farming; p. *3,111*.
Sedgley, *industl. t.*, *urb. dist.*, Staffs, Eng.; nr. Wolverhampton; coal-mng., metal wks., bricks, engin., fireclay goods; p. (1951) *23,104*.
Segezha, *t.*, R.S.F.S.R.; on L. Vyg; cellulose, paper, sawmilling.
Sego, *L.*, R.S.F.S.R.; 20 by 20 m.; N.W. of L. Onega; outlet into White Sea.
Ségou, *t.*, *R. pt.*, Sudanese Rep., W. Africa; on R. Niger; ctr. of irrigation scheme; cotton, hides, cattle, wax, salt; p. (1946) *22,150*.
Ségou Canal, Fr. W. Africa; leaves R. Niger 4 m. below Bamako, extends 130 m. N.E. to Segou; irrigates 3,000 sq. m. on right bank of Niger and assists navigation.
Segovia, *prov.*, Old Castile, Spain; agr., stock-keeping, and mftg.; cap. Segovia; a. 2,682 sq. m.; p. (1950) *201,433*.
Segovia, *c.*, Spain; nr. R. Eresma; cath.; iron-ware, cloth, earthenware, paper, flour; p. (1949) *34,838*.
Segre, *R.*, Lérida, N.E. Spain; rises in E. Pyrenees, flows S.W. into R. Ebro; water irrigates the a. around Lerida, the lgst. block of irrigated land in Spain; length approx. 170 m.
Segura, *R.*, Spain, flows to Mediterranean at Guardamar; 180 m.
Seim, *R.*, Ukrainian S.S.R.; trib. of R. Desna; length 300 m.
Seine, *dep.*, France; mkt. gardens; gypsum, freestone; a. 185 sq. m.; cap. Paris; p. (1954) *5,154,834*.
Seine, *R.*, France; rising in Côte d'Or dep., and flowing past Paris and Rouen to English Channel at Havre; length 473 m.
Seine-et-Marne, *dep.*, N. France; agr., stock-raising, dairying; "Brie" cheese; porcelain, gypsum, flagstone; cap. Melun; a. 2,275 sq. m.; p. (1954) *453,438*.
Seine-et-Oise, *dep.*, N. France; mkt. gardening, vineyards, wheat; machin., chemicals, porcelain, gunpowder, stone; cap. Versailles; a. 2,185 sq. m.; p. (1954) *1,708,791*.
Seine-Maritime, *dep.*, N. France; undulating and fertile; grain, dairying, textiles, iron, shipbldg., flax, chemicals; fisheries; cap. Rouen; a. 2,448 sq. m.; p. (1954) *941,684*.
Sekia el Hamra, *prov.*, Spanish Sahara; N.W. Africa; a. 32,047 sq. m.; ch. t. Smara.
Sekondi, *spt.*, Ghana, W. Africa; connected with and largely superseded as a pt. by Takoradi harbour; p. (1948) *44,130* (inc. Takoradi).
Selangor, *st.*, Malaya; on W. side of Peninsula; a. 3,160 sq. m.; cap. Kuala Lumpur; p. (1957) *1,012,047*.
Selby, *mkt. and industl. t.*, *urb. dist.*, W.R. Yorks, Eng.; on R. Ouse, 13 m. S. of York; ancient abbey church; flour-milling, flax, oil-cake; p. (1951) *10,217*.
Sele, *R.*, S. Italy; rises in S. Apennines, flows W. into G. of Salerno; headwaters now carried E. through gr. Apennine tunnel (7 m.) to irrigate plateau of Apulia in S.E. Italy.
Selenga, *R.*, Mongolia and Siberia; flows into L. Baikal; length 750 m.
Sélestat, *t.*, Bas-Rhin, France; on R. Ill; two caths.; p. (1954) *11,705*.
Selkirk, *co.*, Scot.; mountainous (Broad Law 2,723 ft.); sheep, oats, woollens; cap. Selkirk; a. 267 sq. m.; p. (1951) *21,724*.
Selkirk, *bor.*, *co. t.*, Selkirk, Scot.; on Ettrick Water; 4 m. S. of Galashiels; tartans, tweeds; p. (1951) *5,853*.
Selkirk, *t.*, Yukon, Canada; on junction of Macmillan and Lewes Rs.
Selkirk Mtns., B.C., Canada; run N.W. to S.E. parallel with Rocky Mtns. and occupy inside of

the great bend of R. Columbia; ancient rocks; highly mineralised; pierced by Connaught Tunnel on Canadian Pacific Rly. route through Kicking Horse Pass to Vancouver; rise to over 9,000 ft.
Selma, *c.*, Ala., U.S.A.; on Alabama R.; in cotton-growing dist.; also dairying, lumbering, ironwks., fertilisers; p. (1950) *22,840* (more than half coloured).
Selsey, *t.*, Sussex, Eng.; on Selsey Bill, 7 m. S. of Chichester; coastal resort; fishing.
Selsey Bill, *peninsula*, between Bognor Regis and Portsmouth, Sussex, Eng.
Selukwe, *t.*, S. Rhodesia; alt. 4,734 ft.; gold-mining, chrome ore; ranching and agr.
Selwyn Range, *mtns.*, Queensland, Australia; extends 350 m. W. from Gr. Dividing Range; forms divide between Rs. flowing N. to G. of Carpentaria and Rs. flowing S. to Darling; gold, copper; alt. mainly below 1,500 ft.
Semarang, *spt.*, Java, Indonesia; exp. sugar, tobacco, tapioca, kapok; shipbldg., rly. repairs, cement, sawmills; p. *217,800*.
Seminole, *t.*, Okla., U.S.A.; p. (1950) *11,863*.
Semipalatinsk, *t.*, Kazakh. S.S.R.; on R. Irtysh; textiles, sawmilling, engin.; p. (1959) *155,000*.
Semlin, *see* **Zemun.**
Semmering Pass, *low pass*, Austria; provides route across E. Alps for rly. from Vienna to Venice; alt. below 3,000 ft.
Sena, *t.*, Mozambique, Port. E. Africa; on R. Zambesi.
Sendai, *t.*, Honshu, Japan; salt, fish; p. (1950) *341,685*.
Seneca Falls, *t.*, N.Y., U.S.A.; on R. Seneca; mnfs.; p. (1950) *6,634*.
Senegal, *R.*, W. Africa; flowing from Kong mtns. W. and N.W. to Atlantic at St. Louis, above Cape Verde; length 1,000 m.
Senegal, *aut. rep.* within Fr. Community, member of Mali Fed.; N. of R. Gambia; groundnuts; cap. Dakar; a. 77,730 sq. m.; p. (1957) *2,269,000*.
Senekal, *t.*, O.F.S., S. Africa; tr. ctr.; wool, wheat; p. *4,415*.
Senigallia, *t.*, Italy, N.W. of Ancona; p. *26,345*.
Sennar, *t.*, Sudan; on Blue Nile, on rly. route to Khartoum, Suakin, Pt. Sudan; dam for irrigation and control of Nile floods; hydro elec. power sta.; p. *1,000*.
Sennin, *see* **Kamaishi.**
Sens, *t.*, Yonne, France; on R. Yonne; cath., the ancient Agedincum; farm implements, boots, chemicals, cutlery; p. (1954) *18,612*.
Senta, *t.*, Jugoslavia; on R. Tisa; flour, leather, sugar, wine, agr., machin., chemicals, paper; p. (1953) *25,524*.
Seoul, *cap.*, S. Korea; brassware, pottery, silk; p. (1949) *1,446,019*.
Septimer, *mtn. pass*, Swiss Alps, can. Grisons; alt. 7,611 ft.
Seraing, *t.*, Liége, Belgium; extensive ironwks.; engin.; p. (estd. 1957) *42,534*.
Serampore, *t.*, W. Bengal, India; former Danish settlement; cotton and silk weaving, pottery, jute- and paper-mills; p. (1941) *55,339*.
Serang, *I.*, Malaya Archipelago, Indonesia, N. of Amboyna; a. 6,612 sq. m.; tobacco; p. (estd.) *105,000*
Serbia, *fed. unit*, Jugoslavia; former independent kingdom; a. 33,930 sq. m.; cap. Belgrade; p. (1948) *6,523,224*.
Serdovsk, *t.*, R.S.F.S.R., S.W. of Penza; grain tr.; p. *10,000*.
Seremban, *t.*, cap., Negri Sembilan, Malaya; p. *25,000*.
Seres, *see* **Sérrai.**
Sereth, *R.*, Romania; trib. of R. Danube; length 290 m.
Sergipe, *cst. st.*, Brazil; forested; tobacco, maize, sugar, cotton; cap. Aracaju; a. 8,129 sq. m.; p. (1950) *650,132*.
Sergo, *see* **Kadiyevka.**
Sériphos, *I.*, Cyclades gr., Grecian Archipelago, Ægean Sea.
Serowe, *cap. c.*, Bamangwato tribe, Bechuanaland prot., S.W. Africa; p. *15,935*.
Serpukhov, *t.*, *R. pt.*, R.S.F.S.R.; on R. Oka, S. of Moscow; engin., textiles; p. (1959) *105,000*.
Serra da Bandeira, *cap.*, Hulia prov., Angola; tourists.
Serra da Mantiqueira, *mtn. range*, highest in Brazil;
Serra do Espinhaco, *mtns.*, Brazil; highest peak, Itambe, 6,705 ft.; iron-ore deposits.
Serra do Mar, *mtns.*, Brazil; form steep E. edge of Brazilian Plateau S. from Rio de Janeiro.
Sérrai (Seres), *prefecture* Macedonia, Greece; cap. Sérrai; p. (1951) *221,015*.
Sérrai (Seres), *t.*, Macedonia, Greece; on Struma R.; woollens, cottons, carpets; p. (1951) *36,279*.
Sestri Levante, *spt.*, Italy; nr. Genoa; p. *15,341*.
Sète (formerly **Cette**), *spt.*, Hérault, France; on Mediterranean cst.; chemicals, fisheries; exp. oysters, brandy, wine; p. (1954) *33,454*.
Setif, *mkt. t.*, E. Algeria; alt. 3,596 ft.; cereals, horses; p. (1948) *51,674*.
Setouchi, *coastal region*, S.W. Honshu, N. Shikoku, Japan; flanks shores of Inland Sea; sm. plains backed by terraced hillsides; intensive agr., rice, mulberry, tea, citrus fruits; many sm. ts. engaged in fishing, local tr. and varied inds. inc. textiles, salt-extraction from brine.
Setté Cama, *spt.*, Gabun, Equat. Africa; open roadstead, landing difficult owing to swell; exp. timber.
Settle, *mkt. t.*, *rural dist.*, W.R. Yorks, Eng.; on R. Ribble in heart of Craven dist.; caves with remains of extinct fauna; thread, cotton; p. (1951) *14,279*.
Settsu Plain, S. Honshu, Japan; located at head of Osaka Bay at E. end of Inland Sea; intensively cultivated alluvial lowlands, ch. crops, rice, vegetables, oranges; gr. industl. belt extends along cst. through Kobe, Osaka, Kishiwada; engin., chemicals, textiles; a. 500 sq. m.
Setubal, *c.*, *spt.*, Lisbon, Portugal; on R. Sado; boatbldg., fishing, sardine-curing, lace, salt, fertilizers, etc.; p. (1940) *268,272*.
Seul Lac, *L.*, S. of St. Joseph L., Ontario, Canada.
Sevan (Gokcha), *lge. L.*, Armenian S.S.R.; alt. 6,340 ft.; never freezes; surrounded by high barren mtns.
Sevan, *t.*, Armenian S.S.R.; underground hydro-elec. power sta.
Sevastopol, *spt.*, Ukrainian S.S.R.; built on ruins left after famous siege 1855; report on Black Sea; naval arsenals; leather, tiles, machin.; exp. grain; p. (1959) *148,000*.
Seven Islands, *pt.*, on St. Lawrence, Quebec, Canada; exp. iron brought by rail from Ungava peninsula.
Sevenoaks, *mkt. t.*, *urb. dist.*, Kent, Eng.; in Vale of Holmesdale, 5 m. N.W. of Tonbridge; residtl.; agt. fruit and hops, light inds.; p. (1951) *14,834*.
Severn, *R.*, W. of Eng. and N. Wales; rises in Montgomery and flows to Bristol Channel; length 200 m.
Severn, *R.*, Ontario, Canada; flows to Hudson Bay; length 350 m.
Severn Tunnel, Eng.; under estuary of R. Severn between Pilning (Glos.) and Severn Tunnel Junction (Mon.); carries main rly. from London to S. Wales; longest main-line rly tunnel in Brit. Is.; length nearly 4½ m.
Seville, *prov.*, Spain; agr., mining; cap. Seville; a. 5,430 sq. m.; p. (1950) *1,099,374*.
Seville, *pt.*, *cap.*, Seville, Spain; on R. Guadalquivir; Gothic cath.; palace, univ.; ironware, machin., cigars, silks, porcelain, aircraft; exp. lead, iron, mercury, cork, oranges, lemons, wine; birthplace of Velasquez and Murillo; p. (1950) *376,627*.
Sevran, *t.*, Seine-et-Oise, France; p. (1954) *12,956*.
Sèvres, *t.*, Seine-et-Oise, France; on R. Seine; celebrated porcelain mnfs.; p. (1954) *17,109*.
Sevres (Deux), *dep.*, N. France; p. (1954) *312,842*.
Seychelles Is., *Brit. col.*, Indian Ocean; consisting of 92 Is., lgst. I. Mahé; cap. Victoria; exports prods. of coconut palm, phosphate, essential oils and spices; total a. 156 sq. m.; p. (estd. 1958) *41,901*.
Seyne or **La Seyne-sur-Mer,** *t.*, Var, France; nr. Toulon; shipbldg.; p. (1954) *26,672*.
Sfax, *spt.*, Tunisia; admin. ctr.; exp. phosphate, olive oil, salt, esparto grass, cereals, dates, hides; imports food, coal, textiles, soap; sponges; fishing; p. (1946) *54,637*.
Sgurr Mor, *mtn.*, Ross and Cromarty, Scot.; alt. 3,483 ft.
Shabani, *t.*, S. Rhodesia; asbestos; p. *8,000* (incl. *1,700* Europeans).
Shaftesbury, *mkt. t.*, *mun. bor.*, Dorset, Eng.; 10 m. N. of Blandford; agr. implements, chemicals, glove mftg.; p. (1951) *3,297*.
Shahabad, *t.*, Bihar, India; cement; p. (1941) *53,122*.

Shahjahanpur, *c.*, Uttar Pradesh, India; on Deoha R.; sugar; p. (1951) *104,835*.
Shahpur, *t.*, W. Punjab, Pakistan; cotton; p. *8,545*.
Shaker Heights, *t.*, Ohio, U.S.A.; p. (1950) *28,222*.
Shakhty (Alexandrovsk Grushevski), *t.*, R.S.F.S.R.; coal, engin., elec. power; p. (1959) *196,000*.
Shamokin, *bor.*, Penns., U.S.A.; iron mftg., anthracite; p. (1950) *16,879*.
Shan States, former Federated Shan States and Wa States, Burma; p. *1,617,071*.
Shandakan Tunnel, N.Y. st., U.S.A.; carries water under Catskill Mtns. to augment water supply of c. of N.Y.; length 18 m.
Shanghai, *c., pt.*, Kiangsu, China; on Whangpoo trib. of Yangtze-Kiang; most impt. of the former Chinese treaty pts., considerable exp. silk and tea; mnfs. paper, cigarettes, cotton; shipbldg., engin.; p. (estd. 1957) *7,100,000*.
Shanhaikwan, *t., pt.*, Hopei, China; on rly. from Peking to Manchuria and the Liaotung G.
Shanklin, *see* **Sandown-Shanklin.**
Shannon Airport, Clare, Ireland, *see* **Foynes.**
Shannon, *R.*, Ireland; separating Connaught from provs. of Leinster and Munster, and flowing to Atlantic at Loop Head; length 224 m.
Shansi, *inland and hilly prov.*, N. China, bounded W. and S. by the Hwang-Ho; coal, iron ore, petroleum, salt; cap. Taiyuan; a. 60,394 sq. m.; p. (1953) *14,314,485*.
Shantou, *see* **Swatow.**
Shantung, *maritime prov.*, China, on the G. of Chihli and the Yellow Sea; pts.: Cheefu, Weihaiwai and Kiaochow; fertile plain; grain, silk, fruit; coal, iron, lead, copper; cap. Tsinan; a. 56,447 sq. m.; p. (1953) *48,876,548*.
Shap, *par.*, Westmorland, Eng.; near by is Shap Summit 914 ft., an impt. pass traversed by rly. and by a main road; granite.
Shapinsay, Orkney Is., Scot.
Shari, *R.*, Sudanese Rep., W. Africa; flows from the S. to L. Chad; navigable for greater part of course; length 700 m.
Sharikhan, *t.*, Uzbek, S.S.R.; nr. Namagan; cotton.
Sharon, *plain*, Israel; citrus fruits, vineyards, poultry.
Sharon, *t.*, Penns., U.S.A.; ironwks., bricks, elec. goods; p. (1950) *26,454*.
Sharpness, *vil.*, Glos., Eng.; on S. shore, Severn estuary 18 m. N.E. of Avonmouth; entrance to Berkeley Canal.
Shasi, *c., R. pt.*, Hupeh, China; on Yangtze-Kiang; cotton cloth; p. (estd. 1931) *113,526*.
Shasta, *mtn.*, Cal., U.S.A.; 14,380 ft.
Shatt-al-Arab, *R.*, Iraq; formed by union of Tigris and Euphrates, flows thence to head of Persian G.; length 120 m.
Shatura, *t.*, R.S.F.S.R.; E. of Moscow; elec. power-plant; p. (1954) *50,000*.
Shawinigan Falls, *c.*, Quebec, Canada; pulp and paper; p. (1941) *20,325*.
Shawnee, *c.*, Okla., U.S.A.; cottons, meat-preserving; p. (1950) *22,948*.
Shcherbakov (Rybinsk), *t., R. pt.*, R.S.F.S.R.; on R. Volga; engin., textiles, hydro-elec.; p. (1959) *181,000*.
Sheaf, *R.*, W.R., Yorks, Eng.; rises in S.E. Pennines, flows N.E. to join R. Don at Sheffield; for last 2 m. narrow valley crowded with smaller factories of Sheffield; valley provides main route to S. (Chesterfield) and S.W. (Manchester via Totley); length 11 m.
Sheboygan, *c.*, Wis., U.S.A.; on L. Michigan; furniture mftg., pianos, gloves, enamelled ware; p. (1950) *3,599*.
Shechem, *see* **Nablus.**
Sheerness, *spt., urb. dist.*, Kent, Eng.; on I. of Sheppey at entrance to estuary of R. Medway; Government dockyard and garrison; p. (1951) *15,727*.
Sheffield, *c., co. bor.*, W.R. Yorks, Eng.; on cramped site at confluence of Rs. Sheaf and Don; gr. cutlery, steel, iron, brass mftg. ctr., machin., instruments, electro-plate; p. (1951) *512,834*.
Shelbyville, *t.*, Ind., U.S.A.; on Big. Blue R.; mftg. ctr. in colly. and agr. region; p. (1950) *11,734*.
Shellal (Esh Shellal), *t., R. pt.*, Upper Egypt, N.E. Africa; on right bank of R. Nile, 2 m. above Aswan Dam; S. terminus of Egyptian rly. system; river-steamer service connects with Wadi Halfa, 160 m. upstream, N. terminus of Sudan rly. system.
Shellhaven, *oil refineries*, Essex, Eng.; on N. side of Thames estuary, nr. Stanford-le-Hope.
Shelton, *t.*, Conn., U.S.A.; old vil. of Huntingdon, has 18th-century houses; p. (1950) *12,694*.
Shenandoah, *t.*, Penns., U.S.A.; anthracite; p. (1950) *15,704*.
Shenandoah, *R.*, Va., U.S.A.; trib. of Potomac R.
Shendi, *t.*, Sudan; on R. Nile; p. *14,300*.
Shensi, *prov.*, China; W. of Hwang-Ho; wheat, cotton; coal, petroleum; cap. Sian; a. 72,919 sq. m.; p. (1953) *15,881,281*.
Shenyang (Mukden), *c.*, Liaoning, Manchuria, N. China; on Hun-Ho in narrowest part of lowland linking N. China plain with plain of Manchuria; impt. rly. junction with main routes N. to Harbin and Trans-Siberian Rly., S. to Pekin, Lushun (Pt. Arthur) and into Korea; gr. comm. and political ctr.; p. (1956) *2,290,000*.
Shepherd's Bush, *residtl. sub.*, W. London, Eng.
Shepparton, *t.*, Victoria, Australia; 118 m. N.N.E. of Melbourne; p. (1957) *12,090*.
Sheppey, I. of, Kent, Eng.; in Thames estuary E. of mouth of R. Medway; 9 m. long, 5 m. wide; cereals, sheep-raising.
Shepshed, *t., urb. dist.*, Leicester, Eng.; 3 m. W. of Loughborough; gloves, boots, shoes, needles; p. (1951) *6,235*.
Shepton Mallet, *mkt. t., urb. dist.*, Somerset, Eng.; at foot of Mendip Hills, 5 m. S.E. of Wells; shoes, cider; p. (1951) *5,131*.

Siemianowice Siaskie, *t.*, Poland; nr. Katowice; p. *18,438*.
Siena, *hill-town*, Tuscany, Italy; 32 m. S. of Florence; spreads over three hilltops with Piazza del Campo in between where celebrated Palio festival (horse-races) are held; 13th- and 14th-cent. arch., cath.; agr. mkt., tanning, glass, textiles, bricks; *panforte* confectionery; tourist ctr.; p. (1951) *52,226*.
Sieradz, *t.*, Poland; on R. Warta; p. *32,449*.
Siero, *t.*, Oviedo, Spain; on R. Nora; agr., livestock-raising, coal-mining; p. *30,931*.
Sierra da Estrella, *see* **Estrella, Sierra da**.
Sierra de Baudo, *mtn. range*, Columbia, S. America.
Sierra de Gata, *mtn. range*, Portugal-Spain.
Sierra de Gredos, *mtn. range*, Central Spain.
Sierra de Guadarrama, *mtn. range*, Central Spain.
Sierra Leone, *Brit. col. and prot.*, W. Africa, situated between Guinea and Liberia; covered with ranges of hills; ch. prod., palm kernels, ginger, piassava, kolas; iron ore, diamonds, chromite, gold; cap. Freetown; a. 27,925 sq. m.; p. (1956) *2,100,000*.
Sierra Madre, *mtn. range*, W. cst., Mexico and Guatemala.
Sierra Mojada, *mtn. range*, Central Mexico.
Sierra Morena, *mtn. range*, Spain; between Guadalquivir and Guadiana basins, highest point 5,500 ft.
Sierra Nevada, *mtn. range*, Granada, Spain; highest summit, Mulhacen.
Sierra Nevada, *mtn. chain*, Cal., U.S.A.; highest peak Mt. Whitney, alt. 14,898 ft.
Sierra Nevada de Mérida, *mtn. range*, W. Venezuela; S. America; extends N.E. from San Cristóbal to Barquisimeto; extension of E. range of Andes, alt. over 16,000 ft.; impt. coffee plantations from 3,000 to 6,000 ft. on slopes.
Sierra Nevada de Santa Marta, *mtns.*, Colombia, S. America; summits over 19,000 ft.
Sighet, *t.*, N. Romania on U.S.S.R. frontier; p. (1945) *18,329*.
Siglufjörd, *spt.* N. Iceland; herrings; p. (1947) *2,972*.
Siguiri, *t.*, Guinea, W. Africa; on R. Niger; gold; p. *11,000*.
Siirt, *t.*, Turkey; S. of Bitlis; p. *16.,210*
Sikang, *former prov.*, China; included in Szechwan prov. 1955.
Sikasso, *t.*, Sudan, W. Africa; mkt., route ctr.; p. *13,000*.
Sikkim, *st.*, E. Himalayas, adjoining Tibet, Nepal

and Bhutan; dense forests, with rich flora and orchidaceæ, but grows rice and Indian corn in the clearings; ch. tr. routes from Bengal to Tibet pass through the st.; cap. Gangtok; a. 2,745 sq. m.; p. (1951) *137,725*.

Sila, La, *mtn. massif*, Calabria, S. Italy; granite mass occupying full width of peninsula; alt. over 3,500 ft., max. 6,327 ft.

Silchester, *par.*, Hants, Eng.; between Basingstoke and Reading; impt. ctr. of the Roman road system; many Roman remains.

Silesia (Polish **Śląsk**, Czech **Slezsko**), *geographical region*, Europe; extends on both sides of Oder R.; rich in coal, zinc, iron, arsenic; farming, sugar-beet, cereals, fruit, general ind.; has frequently changed hands, in 1919 was divided between Germany (70%), Poland (25%), and Czechoslovakia (5%); in 1945 the former German part became Polish, now forms 2 provs., caps. Katowice and Wroclaw; p. *4,764,500*; the Czechoslovakian part is united with Moravia; p. *200,000*.

Silistra, *t.*, Bulgaria; on N.E. Romanian border, on Danube R.; cloth, distilleries, sawmills, grapes; p. *16,180*.

Silkeborg, *t.*, Jutland, Denmark; W. of Aarhus; p. *20,955*.

Silloth, *resort*, on Solway Firth, Cumberland, Eng.; coal, grain.

Silsden, *t.*, *urb. dist.*, W.R. Yorks, Eng.; on R. Aire, 4 m. N.W. of Bingley; p. (1951) *5,820*.

Silva Porta, *t.*, Angola, Africa; admin. t.; cattle, agr. ctr.; p. *4,671*.

Silver City, *t.*, N.M., U.S.A.; gold, iron, silver; cattle; health resort; p. (1950) *7,022*.

Silver Spring, *t.*, Md., U.S.A.; sub. to Wash.; p. *43,294*.

Simalur, *I.*, S. of Sumatra, Indonesia.

Simcoe, *L.*, N. of L. Ontario, Canada; 30 m. by 18 m.

Simeto, *R.*, Sicily, Italy; rises in central Sicily, flows E. across plain of Catania into Mediterranean; lower course bordered by malarial marshes; length 54 m.

Simferopol, *t.*, Ukrainian S.S.R.; on R. Salghir nr. Sevastopol; soap, candles, fruits, engin.; p. (1959) *189,000*.

Simla, *cap.*, E. Punjab, Indian Union; alt. 7,075 ft. above sea, with sanatorium; p. (1941) *18,348*.

Simonstown, C. of Gd. Hope, S. Africa; naval sta., docks; p. *7,310*.

Simplon, *mtn.*, Switzerland; alt. 11,695 ft.; the pass over the Simplon (alt. 6,594 ft.) from Domodossola, Italy, to Brig in the Rhône valley, Switzerland, was originally made by Napoleon I. The Simplon rly. tunnel leads from Brig on the Swiss side to Iselle in the Val di Vedro on the Italian and is the longest in the world, 12¼ m.

Sinai, *peninsula*, between Gs. of Aqaba and Suez, at head of Red Sea; a. 11,055 sq. m., mainly desert; Mt. Sinai (the Arab Jebel Musa, or "Mt. of Moses") called also Horeb, is one of numerous mtns. on the peninsula; alt. 7,363 ft.

Sinaloa, *st.*, Mexico; on G. of Cal.; agr. and mining, rich in gold, silver, copper, iron and lead; cap. Culiacán; a. 22,580 sq. m.; p. (1950) *621,940*.

Sind, *st.*, Pakistan; formerly part of the Mogul Empire; admin. H.Q. at Karachi, spt. for the Indus valley; mostly desert, only one-tenth irrigated; prod., cereals, hemp, cotton, indigo; a. 50,443 sq. m.; p. (1951) *4,619,000*.

Sindara, *t.*, Fr. Equat. Africa; admin. ctr.

Sines, *spt.*, S. Portugal; birthplace of Vasco da Gama; p. *6,094*.

Singapore, *I.*, *Brit. Crown col.*, intern. self-governing st. (1959); at S. extremity of Malay Peninsula; includes Christmas I. and Cocos Is.; naval, military and air-force base; rubber, fruits, coffee; a 291 sq. m.; p. (1959) *1,550,000*.

Singareni, *t.*, Hyderabad, India; coal.

Singen, *t.*, Baden–Württemberg, Germany; N.W. of L. Constance; foodstuffs, metals; p. (estd. 1954) *23,400*.

Singhbhum, *dist.*, Bihar, India; iron- and steel-wks.

Singora, *see* **Songkhala**.

Sinkiang-Uighur, *aut. region*, China, bordering on Soviet Union and Kashmir; cereals, cotton, wool, silk; cap. Tihwa; a. 705,962 sq. m.; p. (1953) *4,873,608*.

Sinneh, *t.*, Persia; carpets; p. *32,000*.

Sinop, *Turkish t.*, on Black Sea in *I.* of same name; timber, silk; p. *4,896*.

Sintra (**Cintra**), *t.*, Portugal; summer resort, 18 m. from Lisbon; convention of S., 1808.

Sion, *cap.*, Valais, Switzerland; on R. Rhône; built on two castled hills; cath.; p. *9,363*.

Sioux City, Iowa, U.S.A.; on R. Missouri; meat-packing, foundries, elec. goods, cement; p. (1950) *83,991*.

Sioux Falls, *t.*, S.D., U.S.A.; on Big. Sioux R.; in rich wheat region; machin., cars, farming implements; p. (1950) *52,696*.

Sirajganj, *t.*, Bengal, Pakistan; gr. jute-mart; p. *5,000*.

Sir Edward Pellew, *gr. of Is.*, N. Australia; in G. of Carpentaria.

Siret R., *see* **Sereth R.**

Sirmur, *former Punjab St.*, India; merged into the Indian Union; ch. t. S. (or Nahan).

Sitapur, *t.*, Uttar Pradesh, India; p. *30,381*.

Sitka (formerly **Novo Archangelsk**), *t.*, S.E. Alaska, U.S.A.; on Baranof I., in Sitka Sound; was ch. pt. of former Russian America; gold-mines; lumbering, canning; naval and coaling sta.; p. (1950) *2,080*.

Sitra, *I.*, Persia G.; forming part of st. of Bahrain, Arabia, 3 m. long and 1 m. wide; from here an oil pipeline and a causeway carrying a road extends out to sea for 3 m. to a deep-water anchorage.

Sittang, *R.*, Burma; rises in Pegu Yoma, flows S., enters G. of Martaban, Andaman Sea through delta; valley intensively cultivated, rice; delta forested; length 610 m.

Sittingbourne and Milton, *mkt. t.*, *urb. dist.*, Kent, Eng.; on Milton Creek, 9 m. E. of Chatham; paper-mills, brick-wks.; cement; ctr. of fruit-growing dist.; p. (1951) *21,904*.

Sivas, *Turkish I.*, rich in minerals, has mineral springs with fertile grain-growing soil, fine orchards and vineyards, besides timber forests; cap. Sivas; p. (1945) *494,373*.

Sivas, *t.*, Turkey; in the Kizil Irmak valley; mnfs. woollens; p. (1945) *45,419*, three fourths Moslems.

Sivash or **Putrid Sea**, lagoon on E. side of Crimea, U.S.S.R.

Siwa, *oasis*, Egypt; in Libyan Desert, 300 m. S.W. of Alexandria; dates, olives, remains of temple of Ammon and the fountain of the Sun; 20 m. long, 1 m. wide; p. *1,000*.

Sjæiland I., Denmark; lgst. I.; agr., fishing, mnfs.; ch. t. Copenhagen; a. 2,840 sq. m.

Skagen, *t.*, N. Denmark; on cst. of the Skagerrak; fishing; p. *6,446*.

Skagerrak, arm of N. Sea, giving access to the Kattegat, between Norway and Denmark, 70–90 m. wide.

Skågway, *sm. spt.*, Alaska, U.S.A.; at head of Lynn Canal inlet, 400 m. N.W. of Prince Rupert; linked by rly. to Whitehorse on Upper R. Yukon; boomed in gold rush (in 1898, p. *15,000*), subsequently declined; p. (1940) *634*.

Skanderborg, *t.*, Jutland, Denmark; S.W. of Aarhus; p. *4,171*.

Skåne (**Scania**), *peninsula*, extreme S. of Sweden; corresponds approx. to cos. Malmöhus, Kristianstad; most favoured part of Sweden in relief, soil, climate; intensive farming, wheat, barley, sugar-beet, fodder crops, dairy cattle; ch. ts. Malmo, Lund, Trelleborg; a. approx. 4,000 sq. m.

Skaraborg, *co.*, Sweden; a. 3,269 sq. m.; p. (1950) *248,397*.

Skaw, The (**Grenen**), *C.*, at extreme N. of Denmark.

Skeena, *R.*, B.C., Canada; rises in N. Rocky Mtns., flows S.W. to Pac. Oc. at Prince Rupert; lower valley used by Canadian National Rly. from Edmonton (Alberta) to Prince Rupert via Yellowhead Pass; length approx. 400 m.

Skegness, *t.*, *urb. dist.*, Lindsey, Lincoln, Eng.; on E. cst. at entrance to The Wash; farming, vegetables; resort; p. (1951) *12,554*.

Skelmersdale, *t.*, *urb. dist.*, Lancs, Eng.; coal, bricks, drainpipes; p. (1951) *6,211*.

Skelton and Brotton, *t.*, *urb. dist.*, N.R. Yorks, Eng.; at N. foot of Cleveland Hills, 10 m. E. of Middlesbrough (1951) *12,999*.

Skerries, *spt.*, Dublin, Ireland; fishing; muslin, stones; p. (1951) *2,457*.

Skibbereen, *mkt.*, *spt.*, *urb. dist.*, Cork, Ireland; farming; p. (1951) *2,341*.

Skiddaw, *mtn.*, Cumberland, Eng.; E. of Bassenthwaite L.; alt. 3,054 ft.
Skien, *spt.*, Bratsberg, Norway; on R. Skien; saw-mills, ice, and timber tr.; p. (1946) *14,474*.
Skierniewice, *t.*, Poland; S.W. of Warsaw; p. *17,666*.
Skipton, *t.*, *urb. dist.*, W.R. Yorks, Eng.; on R. Aire, 6 m. N.W. of Keighley; cotton and rayon; p. (1951) *13,210*.
Skive, *t.*, N. Jutland, Denmark; fishing; rly. ctr.; p. *12,360*.
Skopin, *t.*, R.S.F.S.R.; S.E. of Moscow; lignite, engin.; p. *16,740*.
Skopje, *t.*, *cap.*, Macedonia, Jugoslavia; chrome-mines in neighbourhood; the ancient Scopi; asbestos, chemicals; p. (1953) *121,551*.
Skowhegan, *t.*, Me., U.S.A.; p. (1950) *6,183*.
Skye, *I.*, lgst. of the Inner Hebrides, Inverness, Scot.; mountainous; sheep-farming and fisheries; only town, Portree; a. 547 sq. m.
Skyros, *I.*, Grecian Archipelago, E. of Evvoia (Euboea).
Slagelse, *old t.*, Sjaelland (Zealand), Denmark; p. *18,073*.
Slaithwaite, *mkt. t.*, W.R. Yorks, Eng.; S.W. of Huddersfield.
Slamannan, *par.*, Stirling, Scot.; coal, iron; p. *3,001*.
Slanic, *t.*, Wallachia, Romania; on S. flank of Carpathian Mtns., 22 m. N. of Ploesti; impt. salt deposits.
Śląsk, *see* **Silesia**.
Slatina, *t.*, Romania; on R. Olt, 87 m. W. of Bucharest; ancient churches; p. *13,136*.
Slave, *R.*, N.W. Terr., Canada; flows into Gr. Slave L.
Slave Coast, portions of Guinea cst., W. Africa, embracing Dahomey and Nigeria.
Slavonia, former Crown land (with Croatia) of Hungary; now Jugoslavia; a. 8,987 sq. m.; cap. Osijek; p. *2,625,000*.
Slavyansk, *t.*, Ukrainian S.S.R.; coal, chemicals, salt, engin.; p. (1959) *83,000*.
Sleaford, *mkt. t.*, *urb. dist.*, Kesteven, Lincoln, Eng.; 12 m. N.E. of Grantham; agr. and agr. implements, malting, seeds; p. (1951) *7,282*.
Sleepers, The, *gr. of Is.*, Hudson Bay, Canada.
Slezsko, *see* **Silesia**.
Slieve Bloom, *hill range*, Offaly and Laoghis cos., Ireland; highest point 1,733 ft.
Slieve Donard, *mtn.*, N. Ireland; highest of the Mourne Mtns., co. Down; alt. 2,796 ft.
Sligo, *cst. co.*, Connacht, Ireland; pasture, tillage, barren mtn., and turf; livestock, fishing; a. 737 sq. m.; p. (1956) *56,828*.
Sligo, *t.*, Sligo, Ireland; on Sligo Bay; distilling, flour, fisheries; p. (1946) *12,906*.
Slioch, *mtn.*, Ross and Cromarty, Scot.; 3,217 ft.
Sliven, *t.*, E. Roumelia, Bulgaria; famous for black wine; p. (1956) *46,383*.
Slough, *t.*, *mun. bor.*, Bucks, Eng.; on river terrace N. of R. Thames, 23 m. W. of London; many light inds.; p. (1951) *66,439*.
Slovakia, *old prov.*, Czechoslovakia; consists largely of Carpathian Mtns.; ch. t. Košice; a. 18,902 sq. m.; p. (1947) *3,402,300*.
Slovenia, *fed. unit*, Jugoslavia; cap. Ljubljana (Laibach); a. 6,266 sq. m.; p. (1947) *1,389,064*.
Slupsk (Stolp), *t.*, Pomerania, Poland; German before 1945; cas.; machin., agr. implements; p. (1946) *33,948*.
Småland, *dist.*, S. Sweden; barren upland area S. of L. Vättern; moorland, deciduous forest; contrasts greatly with remainder of S. Sweden.
Smederevo, *t.*, Jugoslavia; nr. Belgrade; p. *15,455*.
Smethwick, *co. bor.*, Staffs, Eng.; N.W. sub. of Birmingham; machin., engin., iron, glass; p. (1951) *76,397*.
Smichov, *t.*, Czechoslovakia; on R. Vltava; connected by bridge with Prague; mnfs.; p. *54,370*.
Smith Sound, Arctic Canada; connects Kane Bay with Baffin Bay.
Smith's Falls, *t.*, Ont., Canada; rly. ctr.; p. *7,159*.
Smoky Hill, *R.*, Col., Kan., U.S.A.; trib. of Kansas R.; length 400 m.
Smolensk, *c.*, R.S.F.S.R.; on both banks of the R. Dnieper; tallow, linen, iron and copper smelting, engin.; p. (1959) *146,000*.
Smyrna, *see* **Izmir**.
Snaefell, *highest mtn.*, I. of Man; alt. 2,034 ft.
Snake R. or **Lewis Fork**, trib. of Columbia R., flows from Wyo. to Wash., U.S.A.; length 1,050 m.
Sneek, *t.*, Friesland, Neth.; nr. Leeuwarden; mnfs.; p. *16,820*.
Sneeuwbergen, *mtn. range*, C. of Gd. Hope S. Africa.
Sniatyn, *t.*, Ukrainian S.S.R.; on R. Prut; tanning, horses and cattle fairs; p. *12,120*.
Snizort, Loch, *arm of sea* (14 m. long), N. of I. of Skye, Scot.
Snohetten, *mtn.*, highest in Dovrefjeld range, Norway; alt. 7,565 ft.
Snowdon, *mtn.*, nr. Caernarvon, Wales; (highest in Eng. and Wales); alt. 3,571 ft.
Snowy, *R.*, N.S.W. and Victoria, Australia; rises in Mt. Kosciusko, flows S. into Bass Strait 80 m. W. of C. Howe; water carried through tunnel under Australian Alps to help irrigation in Murray valley; length 220 m.
Soar, *R.*, Leicester, Nottingham, Eng.; rises in uplands of S. Leics, flows N.W. through Leicester, Loughborough, into R. Trent nr. Long Eaton; hosiery and knitwear inds. in lower valley; 43 m. long.
Sobat, *R.*, Sudan, N.E. Africa; rises in S.W. of Abyssinian Highlands, flows N.W. into R. Nile 80 m. below L. No; one of ch. sources of Nile flood-water; Abyssinia receives monsoon rains April to Oct., max. discharge into White Nile, Nov. and Dec.; length over 500 m.
Soche, *see* **Yarkand**.
Society Is., *archipelago*, S. Pac. Oc.; between the Tuamotu Archipelago and Friendly Is., under Fr. protection; ch. I. Tahiti; ch. prod. phosphate and copper; cap. Papeete; p. *37,303*.
Socotra, *Brit. I.*, G. of Aden, Indian Ocean; S. of Arabia and E. of C. Guardafui; gums, dates, fishing, stock-raising; a. 1,382 sq. m.; p. *12,000*.
Sodbury, *rural dist.*, Glos, Eng.; aircraft, bricks, quarrying, coal-mining; p. (estd. 1956) *38,080*.
Söderala, *spt.*, Sweden; nr. Söderhamn; p. *12,299*.
Söderhamn, *spt.*, Sweden; on G. of Bothnia, N. of Gavle; timber, wood-pulp, iron; p. *11,634*.
Södermanland, *co.*, Sweden; S.W. of Stockholm; a. 2,634 sq. m.; p. (1950) *214,056*.
Södertälje, *t.*, Sweden; on L. Malar; engin., matches; resort; p. (1951) *25,266*.
Soerabaya or **Surabaya**, *spt.*, Java, Indonesia; dockyards and arsenal; exp. coffee, rice, cotton, sugar, tapioca; p. over *300,000*.
Soerakarta, or **Solo**, *t.*, Java, Indonesia; p. over *100,000*.
Soest, *c.*, N. Rhine–Westphalia, Germany; cath.; iron ind.; p. (estd. 1954) *30,600*.
Sofala and Manica, *prov.*, Mozambique; N. of Inhambane; by some identified with the "Land of Ophir" of the Bible; cap. Beira.
Sofia, *t.*, *cap.*, Bulgaria; the ancient Sardica, and the Triaditza of the Byzantine Greeks; on Golem Isker R.; univ.; sugar, beer, flour, leather, silk, tobacco, maize, linen, engin., chemicals; p. (1956) *725,756*.
Sogn og Fjordane, *co.*, Norway; a. 7,135 sq. m.; p. (1950) *97,680*.
Sogne Fjord, longest in Norway.
Sohâg, *t.*, Egypt; on R. Nile; p. (1947) *43,234*.
Soignies, *t.*, Belgium; on R. Senne; granite, flax; p. *10,309*.

Suceava, *t.*, S. Bukovina, Romania; former residence of Moldavian princes; fancy leather; p. (1945) *10,123*.

Suchan, *t.*, R.S.F.S.R.; coal; p. (1954) *50,000*.

Suchow (Tungshan), *t.*, Kiangsu, China; on Tai-Hu, 40 m. W. of Shanghai; gr. comm. and industl. ctr., silks, cottons, rice; p. (estd. 1935) *160,013*.

Sucre, *cap.*, Chuquisaca dep. and legal cap. of Bolivia; univ. and cath.; p. (1957) *53,825*.

Sucre, *st.*, Venezuela; cap. Cumana; p. (1941) *291,452*.

Sudan, *rep.*, 1 Jan. 1956, N.E. Africa, bounded by Egypt, Red Sea and Ethiopia, Kenya, Uganda, the Belgian Congo, Fr. Equatorial Africa and Libya; exp. cotton and ground nuts; cap.

Khartoum; a. 1,000,000 sq. m. (approx.); p. (1956) *10,200,000*, Arabs, Negroes and Nubian.
Sudanese Republic *See.* **French Sudan.**
Sudbury, *t., mun. bor.,* W. Suffolk, Eng.; on R. Stour, 12 m. N.W. of Colchester; p. (1951) *6,614*.
Sudbury, *t.,* Ontario, Canada; nickel, copper; p. [(1941) *32,203*.
Sudetes Mtns., *range,* Poland, Czechoslovakia; separating Bohemia and Moravia from Silesia.
Suez, *spt.,* Egypt, N.E. Africa; at head of G. of Suez (arm of Red Sea) and S. entrance of Suez Canal, which crosses the Isthmus of Suez to the Mediterranean at Port Said and is of very gr. value to shipping; the ancient Arsinoë; Port Tewfiq adjoining has quay and docks; p. (1947) *108,250*.
Suez, *G.,* Red Sea; N.W. arm of Red Sea between Arabian Desert and Sinai Peninsula, Egypt; southern approach to Suez Canal; length 190 m., width varies from 12 to 25 m.
Suez Canal, *ship canal,* Egypt, N.E. Africa; connects Mediterranean Sea (Pt. Said) with Red Sea (Suez) through Ls. Manzala, Timsah and Bitter; saves over 4,000 m. on journey N.W. Europe to India, 1,000 m. to Australia; opened 1869; length, 101 statute m., depth 34 ft., average width 200 ft.
Suffolk, *most E. maritime co.,* Eng.; bounded by Essex, Norfolk, Cambridge and the N. Sea; mixed agr., dairying; fisheries; mnf. of agr. implements; civil nuclear power-sta. at Sizewell, due 1966; co. t. Ipswich; a. 1,482 sq. m. divided for admin. purposes into Suffolk E. p. (1951) *321,849* and Suffolk W. p. (1951) *120,590*.
Suhl, *t.,* Thuringia, Germany; toys, armaments; p. (estd. 1954) *24,700*.
Suir, *R.,* Ireland; flows E. to Waterford Harbour.
Suiyuan, *prov.,* China; cap. Kweihwacheng; a. 134,181 sq. m.; p. (1947) *2,084,000*.
Sukhumi, *spt.,* Georgian S.S.R.; resort; sawmilling; p. (1959) *64,000*.
Sukkur, *t.,* Pakistan; on. R. Indus, 230 m. N.E. of Karachi; gr. dam for irrigation; p. (1941) *66,466*.
Sulaiman, *mtns.,* Asia; range bounding the Punjab and Baluchistan.
Sulaimaniya, *liwa,* Iraq; a. 4,554 sq. m.; p. (1956) *272,442*.
Sulina, *t.,* Romania; at mouth of Sulina branch of Danube R.; considerable grain tr.; p. *5,925*.
Sullana, *t.,* N. Peru; rly. ctr.; maize, cotton, cinchona bark; p. (estd. 1950) *27,379*.
Sultanabad, *t.,* Persia; carpet mftg.; p. *55,000*.
Sulu Is., Philippines; archipelago between Borneo and the Philippines; a. 950 sq. m.; acquired by the U.S.A. 1898.
Sumatra, *I.,* Malay Archipelago, Indonesia; separated from Java by Strait of Sunda; coffee, sugar, rice, pepper; gold, tin, petroleum, coal; a. 161,612 sq. m.; p. (1930) *7,841,175*.
Sumba, *I.,* Indonesia; part of Timor Archipelago.
Sumbawa, one of the Lesser Sunda Is., Indonesia; in the E. Indian Archipelago, E. of Lombok; a. (with neighbouring Is.) 5,240 sq. m.; p. *314,843*.
Sumy, *t.,* Ukrainian S.S.R.; engin., chemicals, textiles; p. (1959) *97,000*.
Sunart, Loch, *sea arm,* Argyll cst., W. Scot.; 19½ m. long.
Sunbury-on-Thames, *urb. dist.,* Middx., Eng.; W. of London; residtl., water wks., gravel pits; p. (1951) *23,396*.
Sunda Strait, between Java and Sumatra, Indonesia; 13 m. wide, contains the volcanic I. of Krakatao.
Sundarbans, The, *tract of forest and swamps,* fringing the delta of the Ganges, E. Pakistan; 165 m. long, 81 m. wide; rice grown in N.; tigers and crocodiles found in S.
Sunday I., lgst. of Kermadec Is., N.Z.; 20 m. in circuit and with a p. of *28* is the only one of the Kermadec Is. that is inhabited; met. and radio sta. established on I.
Sunday, *R.,* C. of Gd. Hope, S. Africa; flows into Algoa Bay; length 200 m.
Sunderland, *spt., co. bor.,* Durham, Eng.; at mouth of R. Wear; gr. shipbldg. and coal-exp. ctr. (inc. Monkwearmouth and parts of Bishopwearmouth), best gas coal, also engin., glass, paper and rope; fine harbour, piers and docks; p. (1951) *182,515*.
Sundsvall, *spt.,* Västernorrland, Sweden; on a wide bay of the Baltic nr. Hernösand; timber and wood-pulp inds.; p. (1951) *25,775*.
Sungait, *t.,* Azerbaydzhan S.S.R.; N. of Baku; steel, chemicals, synthetic rubber, aluminium; p. (1954) *50,000*.
Sungari, *R.,* Manchuria, N. China; trib. of R. Amur; inc. the Nonni; length over 1,000 m.
Sungkiang, *prov.,* Manchuria; cap. Mutankiang; a. 30,703 sq. m.; p. (1947) *4,923,000*.
Sungpan, *t.,* Szechwan, China; silver, gold, lead; linseed oil, paper; smelting, engin.
Superior, *c.,* Wis., U.S.A.; at head of L. Superior; gr. tr. in grain, timber, coal, shipbldg. and flour mills; p. (1950) *35,325*.
Superior, *L.,* N. America; lgst. sheet of fresh water in the world; lies between Canada and the U.S.A.; one of the chain of gr. Ls. in the St. Lawrence system; outlet to L. Huron by the St. Mary's R., receives the waters of the St. Louis, Pigeon and Nipigon; a. 32,000 sq. m.
Surat, *c.,* Bombay, India; on R. Tapti; cotton, silk, embroidery; p. (1951) *223,182*.
Surbiton, *mun. bor.,* Surrey, Eng., on R. Thames, nr. Kingston; residtl.; light engin., bricks, tiles, elec. components; p. (1951) *60,675*.
Suresnes, *t.,* Seine, France; p. (1954) *37,149*.
Surinam, *R.,* Neth. Guiana, S. America; flows N. to Atl. Oc. nr. Paramaribo; length 300 m.
Surinam (Neth. Guiana), *Dutch col.,* S. America; ch. exp. bauxite, timber, rubber, rice, fruit; cap. Paramaribo; a. 55,000 sq. m.; p. (1957) *236,000*.
Surrey, *S. co.,* Eng.; S. of R. Thames; cereals, livestock, vegetables; residtl.; a. 722 sq. m.; p. (1951) *1,601,555*.
Sus, *R.,* S. prov. Morocco, N. Africa; flowing to the Atlantic nr. Agadir; length 130 m.
Susa, *see* **Sousse.**
Susak, *spt.,* Jugoslavia; timber and products, foods, cement; p. *16,104*.
Susquehanna, *R.,* N.Y., Penns., and Md., U.S.A.; flows to Chesapeake Bay through highly industl. a.; routeway, W. from Philadelphia and Baltimore across Appalachian Mtns.; length 422 m.
Sussex, *maritime co.,* S.E. Eng.; adjoining Surrey, Kent and Hants, and washed by Eng. Channel; traversed E. to W. by the S. Downs; co. t. Lewes; a. 1,457 sq. m.; divided administratively into Sussex E. p. (1951) *618,083* and Sussex W. p. (1951) *318,611*.
Susten Pass, *modern alpine road,* alt. 7,296 ft., between Haslital and Reuss valley, links Bernese Oberland with Gotthard road.
Sutherland, *N. co.,* Scot.; N.W. Moray Firth, washed by Atlantic and N. Sea; grazing and forest land, most sparsely pop. in Scot.; mountainous, with many lochs; co. t. Dornoch; a. 2,102 sq. m.; p. (1951) *13,664*.
Sutherland Falls, Milford Sound, S.I., N.Z.; height 1,904 ft.
Sutlej, *R.,* E. Punjab, India; rises in the Himalayas and flows to the R. Indus; used for lge.-scale irrigation; length 1,000 m.
Sutton and Cheam, *mun. bor.,* Surrey, Eng.; nr. Croydon; mainly residtl.; p. (1951) *80,664*.
Sutton, *see* **Mablethorpe and Sutton.**
Sutton Coldfield, *t., mun. bor.,* Warwick, Eng.; 6 m. N.E. of Birmingham; hardware, plastics; television transmitter; granted royal charter by Henry VIII.; p. (1951) *47,590*.
Sutton-in-Ashfield, *t., urb. dist.,* Notts, Eng.; 3 m. S.W. of Mansfield; coal, light engin.; hosiery; p. *39,800*.
Suva, *c., cap.,* Fiji Is.; on Viti Levu I., fine harbour; p. (1956) *37,371*.
Suwalki, *t.,* N.E. Poland; nr. bdy. of Lithuanian S.S.R.; timber, grain, woollens; p. *14,000*.
Suwannee, *R.,* Fla., and Ga., U.S.A.; flows to G. of Mexico; known as "Swanee River," length 250 m.
Svalbard, *see* **Spitsbergen.**
Svendborg, *spt.,* Fyn, Denmark; mnfs., earthenware, tobacco, exp. butter, etc.; p. *21,356*.
Sverdlovsk, *t.,* R.S.F.S.R.; on R. Iset, at E. base of the Ural Mtns.; steel, engin., chemicals, textiles; p. (1959) *777,000*.
Svetlyy, *t.,* S.E. Siberia, R.S.F.S.R.; on R. Zhuga; gold; p. *2,500*.
Sviatoi Nos, *C.,* Arctic cst., U.S.S.R.; nr. entrance of White Sea.
Svir, *R.,* U.S.S.R.; flowing between L. Onega and L. Ladoga; length 125 m.
Svistov, *t.,* Bulgaria; on R. Danube, Romanian border; p. *12,949*.
Svolær, *spt.,* Norway; ch. t. Lofoten Is.; fishing.
Swabia, *dist.,* Bavaria, Germany; a. 3,807 sq. m.; cap. Augsburg.

Swabian Alps, *mtns.*, Württemberg, Germany; inc. the Swabian Jura range between valleys of Neckar and Danube.
Swadlincote, *t.*, *urb. dist.*, Derby, Eng.; 3 m. E. of Burton-on-Trent; collys., potteries, earthenware; p. (1951) *20,909*.
Swaffham, *mkt. t.*, *urb. dist.*, Norfolk, Eng.; 11 m. S.W. of King's Lynn; forestry; p. (1951) *2,863*.
Swakopmund, *t.*, S.W. Africa; former spt.; resort; p. *2,942*.
Swale, *R.*, N.R. Yorks, Eng.; joins R. Ure to form R. Ouse; length 60 m.
Swale, *channel*, between I. of Sheppey and Kentish mainland, Eng.; 16 m. long.
Swan, *R.*, W. Australia; flows to Indian Ocean, nr. Perth.
Swan Hill, *t.*, Victoria, Australia; fruit growing and dairying under irrigation; p. (1957) *5,740*.
Swanage, *mkt. t.*, *urb. dist.*, Dorset, Eng.; on bay, E. cst. I. of Purbeck; seaside resort; stone quarries; p. (1951) *6,853*.
Swanland, *region*, W. Australia; consists of extreme S.W. corner of W. Australia; hot, dry summers and mild winter with adequate rain; forests of Karri and Jarrah; agr. vines, citrus and deciduous fruits, wheat; highest pop. density in W. Australia; ch. ts. Perth, Fremantle, Bunbury.
Swansea, *spt.*, *co. bor.*, Glamorgan, Wales; on Swansea Bay, Bristol Channel; coal and iron, copper, steel, zinc, chemicals; lge. exp. anthracite, aluminium wire and cable; p. (1951) *160,832*.
Swat, *dist.*, Malakand, N.W. Frontier Agencies and Tribal Areas, Pakistan.
Swatow (Shantou), *c.*, *spt.*, Kwangtung, S. China; on S.E. cst. nr. mouth of Han Kiang, 200 m. N.E. of Hong Kong; gd. harbour; fishing; sm. coastal tr., mainly with Hong Kong; exp. tangerines; p. (estd. 1946) *146,864*.
Swaziland, *Brit. prot.*, S. Africa; S.E. of the Transvaal; agr., maize, tobacco, fruit, cattle, asbestos, gold, tin, barytes; seat of administration, Mbabane; a. 6,704 sq. m.; p. (1956) *242,960* (inc. *5,919* Europeans).
Sweden, *kingdom*, N. Europe; forming E. (and larger) part Scandinavian Peninsula; mountainous W., but otherwise flat and dissected by Rs. and many Ls., while one-fourth of the land is forest; gr. timber exp. and mining of iron ore, lead, silver, arsenic; cereals, root crops, hay, livestock; mnfs., textiles, matches, machin., glass, chemicals, etc.; cap. Stockholm; a. 173,426 sq. m.; p. (1950) *7,044,039*.

Texel, *I.*, W. Frisian Is., Neth.; a. 83 sq. m.; scene of several naval battles.
Tezcuco or Texocco, *L.*, Mexico; a. 77 sq. m.; less than 2 ft. deep; contains no fish.
Thame, *mkt. t.*, *urb. dist.*, Oxford, Eng.; on R. Thame, 7 m. S.W. of Aylesbury; p. (1951) *3,585.*
Thame, *R.*, trib. of R. Thames, Eng.; length 35 m.
Thames, *R.*, Eng.; rises in the Cotswold Hills,

Glos. and flows past Oxford, Reading, Windsor and London to the Nore; length 209 m.

Thames, *R.*, Ontario, Canada; flows into L. St. Clair; length 160 m.

Thames, *R.*, N.Z., flows N. to G. of Hauraki; length 86 m.

Thameshaven, *lge. oil refinery*, Essex, Eng.; on N. cst. of Thames estuary 8 m. below Tilbury.

Than Hoa, *t.*, Viet-Nam, Indo-China; mkt. and agr. ctr.; rice; p. *25,000*.

Thanet, I. of, *lge. promontory*, N.E. extremity, Kent, Eng.; formed by bifurcation of R. Stour; contains Margate, Ramsgate and Broadstairs, with other seaside resorts.

Thar Desert, on bdy. between India and W. Pakistan; covers slopes between N.W. Deccan and irrigated valley of R. Indus; completely barren, lack of Rs. or level land prevents irrigation; crossed only by caravan routes.

Tharawaddy, *dist.*, Pegu, Burma; mainly forest, with rice fields in the clearings; p. *7,131*.

Thaton, *dist.*, Tennasserim div., Burma; rice and tobacco.

Thaxted, *mkt. t.*, Essex, Eng.; nr. source of R. Chelmer, 5 m. S.E. of Saffron Walden; p. *1,596*.

Thaya, *R.*, Austria; trib. of the R. March; length 130 m.

Thayetmyo, *dist. t.*, Pegu div., Burma; forest, rice, tobacco; p. (of t.) *9,279*.

Thebes, *ruined ancient cap.*, Upper Egypt; on both banks of R. Nile; site now partly occupied by vils. Karnak and Luxor; impt. arch. discoveries in Valley of the Kings in 1923.

The Congo, Republic of, rep. within Fr. Community, formerly Middle Congo, Equatorial Africa; cap. Brazzaville; a. 166,069 sq. m.; p. (estd. 1957) *749,300* Africans; *10,424* Europeans.

Theiss, *see* **Tisa**.

Theodore, *t.*, Queensland, Australia; on R. Dawson; irrigation; cotton, fodder crops.

The Pas, *t.*, Manitoba, Canada; on R. Saskatchewan 80 m. upstream from L. Winnipegosis; rly. junction on line from Prairie Provs. to Churchill on Hudson Bay; branch line to Flin Flon.

The Sound, *see* **Sound, The**.

The West Indies, new Federation 1957, comprising British Colonies of Antigua, Barbados, Dominica, Grenada, Jamaica, Montserrat, St. Kitts-Nevis and Anguilla, St. Lucia, St. Vincent, and Trinidad and Tobago; fed. cap. Chaguaramas, Trinidad.

Thera, *volcanic I.*, Greek archipelago, Ægean Sea; 10 m. long; cap. Thera.

Thermopylæ or **Pylæ**, celebrated pass between Mt. Æta and the sea, N.E. Greece; battle between Persians and Spartans, 480 B.C.

Thesprotia, *prefecture*, Epirus, Greece; cap. Hegoumenitsa; p. (1951) *47,565*.

Thessaloniki (Salonika), *prefecture*, Greece; p. (1951) *459,956*.

Thessaloniki, *t.*, Greece; at head of G. of Thessaloniki; woollens, soap, cottons, brewing, import and exp. tr.; contains fiscal free zone; p. (1951) *217,049*.

Thessaly, *dist.*, Central Greece; containing two main prefectures, Larisa and Trikkala; horse-breeding; a. 5,208 sq. m.; p. (1940) *579,145*.

Thetford, *t.*, *mun. bor.*, Norfolk, Eng.; on Little R. Ouse; fruit and vegetable canning, pulp mftg., engin.; p. (1951) *4,445*.

Thetford Mines, *t.*, Quebec, Canada; asbestos mining ctr.; p. *12,716*.

Thielt, *t.*, Belgium; 17 m. W. of Ghent; lace, wool, cotton, linen; p. (1938) *12,478*.

Thiers, *t.*, Puy-de-Dôme, France; cutlery; p. (1954) *16,243*.

Thiès, *t.*, Senegal, Mali, W. Africa; rly. ctr. and wkshps.; groundnuts; p. (1948) *24,000*.

Thionville, *t.*, Moselle, N. France; nr. Luxembourg border; fruit, vegetables, tanning, brewing; p. (1954) *23,054*.

Thirlmere, *L.*, Cumberland, Eng.; 3 m. long; furnishes part of the water supply of Manchester by a conduit of 96 m.

Thirsk, *mkt. t.*, *rural dist.*, N.R. Yorks, Eng.; in wide gap between Pennines and Cleveland Hills, 7 m. S.E. of Northallerton; flour, farm implements; p. (rural dist. 1951) *13,525*.

Thisted, *t.*, Thyland, Denmark; on Lim Fjord; p. *9,425*.

Thok-Jalung, *t.*, Tibet; in Aling Kangri Mtns.; gold-mining ctr.

Thomar, *t.*, Portugal; paper, cheese; route ctr.; p. *11,333*.

Thomasville, *c.*, Ga., U.S.A.; cotton region; p. (1950) *14,424*.

Thompson, *R.*, B.C., Canada; rises in Monashee Mtns. flows S.W. into R. Frazer 140 m. upstream from Vancouver; valley forms impt. routeway used by trunk rlys. from Vancouver E. towards Yellowhead Pass (Canadian National Rly.) and Kicking Horse Pass (Canadian Pacific Rly.); length approx. 280 m.

Thonon-les-Bains, *t.*, Haute Savoie, France; resort on L. Geneva; p. (1954) *14,016*.

Thornaby-on-Tees, *t.*, *mun. bor.*, N.R. Yorks; opposite Stockton-on-Tees; heavy engin., wire ropery, flour and sugar milling; p. (1951) *23,413*.

Thornbury, *mkt. t.*, *rural dist.*, Glos, Eng.; 10 m. N. of Bristol; aircraft mftg.; p. (rural dist. 1951) *25,848*.

Thornton Cleveleys, *t.*, *urb. dist.*, Lancs, Eng.; 4 m. N.E. of Blackpool; p. (1951) *15,437*.

Thörshavn, *cap.*, Faroe Is.; p. (1945) *3,600*.

Thousand Isles, *L.*, at outfall of L. Ontario; the islets really number 1,500–1,800, and are partly situated in N.Y. State and partly in Canada.

Thrace, ancient name of terr. in S.E. Europe, part of which has been added to Greece; successively under Macedonian, Roman, Byzantine and Turkish rule, before passing to Greece; tobacco; a. 3,315 sq. m.; p. (1951) *336,736*.

Three Points, *c.*, Ghana; W. extremity of Bight of Benin.

Three Rivers (Trois Rivières), *c.*, *pt.*, Quebec, Canada; at confluence of St. Maurice and St. Lawrence Rs.; wood-pulp mnf.; exp. grain, cattle; p. (1956) *50,483*.

Thule, N.W. Greenland; 1,000 m. from N. Pole; American air base, regular services planned; spt. open only 2–3 mths. per annum.

Thun, *L.*, Berne can., Switzerland; occupies valleys of R. Aar where it leaves Alpine region; separated from L. Brienz by deltaic neck of land on which is situated Interlaken; a. 35 sq. m.

Thun, *t.*, Berne, Switzerland; on N.W. end of L. Thun, 16 m. S.E. of Berne; mil. training ctr.; cas. on hill above t.; p. (1941) *20,239*.

Thur, *R.*, Switzerland; flows to R. Rhine, nr. Schaffhausen; length 70 m.

Thurgau, *can.*, N.E. Switzerland, on L. Constance, watered by Thur R.; dairying, fruit, textiles; cap. Frauenfeld; a. 388 sq. m.; p. (1950) *149,738*.

Thuringia, *st.* or *Land*, Germany; situated between Franconia, the Harz Mtns., and the Rs. Saale and Werra and comprising in great part the mountainous Thüringer Wald dist.; oats, potatoes, potash; a. 6,022 sq. m.; p. (1946) *2,927,497*.

Thuringian Forest or **Thüringer Wald**, *wild, wooded hill range*, Central Germany; 95 m. long; famous for romantic scenery and legends.

Thurles, *mkt. t.*, Tipperary (N. Riding), Ireland; on R. Suir; horse fair; p. (1951) *6,276*.

Thursday, *I.*, Torres Strait, Queensland; pearl and trochus fishery ctr.; p. (1957) *1,550*.

Thurso, *burgh*, Caithness, Scot.; on Thurso Bay; most N. t. on Scottish mainland; ancient stronghold of the Northmen; p. (1951) *3,203*.

Tiaret, *t.*, W. Algeria, N. Africa; in strategic pass; walled; agr. mkt.; cereals, wool, cattle; p. *22,344*.

Tiber, *R.*, Italy; flows from Apennines to Mediterranean, passing through Rome; l. 220 m.

Tiberias, *t.*, Israel; on Sea of Galilee (Lake Tiberias); gypsum quarried near by; inland pt.; p. (1946) *11,810*.

Tibesti, *mtns.*, on bdy. between Libya and Fr. W. and Equatorial Africa; barren in spite of slight rainfall; mainly above 6,000 ft., maximum alt. 11,155 ft.

Tibet, *lofty plateau*, Central Asia; called the "Roof of the World," its lowest plains being 12,000 ft. above sea-level; semi-desert; Chinese suzerainty restored, 1951; exp. wool, musk, gold, skins, and drugs; cap. Lhasa; a. 70,003 sq. m.; p. about *6,000,000*.

Ticino or **Tessin**, *can.*, Switzerland; forests, vineyards, olives, and agr.; contains parts of L. Maggiore and L. Lugano; cap. Bellinzona; lgst. t. Lugano; a. 1,086 sq. m.; p. *175,055*.

Ticino, *R.*, Switzerland and Italy; trib. of Po; forms S. approach to St. Gotthard Pass; length 150 m.

Tickhill, *urb. dist.*, W.R. Yorks, Eng.; cas.; p. (1951) *2,550*.
Tidore I., Moluccas, Indonesia; coffee, tobacco, fruit; a. 30 sq. m.; p. *19,126*.
Tien Shan or Celestial Mtns., *lofty chain*, N. frontier Chinese Turkestan; highest peak 24,000 ft.
Tientsin, *former treaty pt.*, *mun. prov.*, Hopei, China; 70 m. S.E. Peiping; cottons, silks; exp. wool, skins, soya-beans; p. (1953) *2,693,831*.
Tierra del Fuego, *archipelago*, extreme S. America, separated from Patagonia by Strait of Magellan, divided politically between Chile and Argentina; a. (Argentine part) 8,344 sq. m.; p. *7,600*.
Tiffin, *c.*, Ohio, U.S.A.; milling, brewing, foundries; p. (1950) *18,952*.
Tiflis, *see* Tbilisi.
Tigre, *st.*, Ethiopia, formerly an independent kingdom; cap. Adua.
Tigre, *R.*, S. America; rises in Ecuador and flows mainly through Peru to the R. Marañon (Amazon); length 400 m.
Tigris, *R.*, Turkey; rising in mtns. of Armenia and Turkestan, flowing S.E. to join the Euphrates 40 m. N.W. of Basra; length 1,100 m.
Tihwa (**Urumchi**), *t.*, Sinkiang, China; p. (estd. 1945) *80,000*.
Tijuco, *see* Diamantina.
Tikhvin, *t.*, R.S.F.S.R.; on R. Syas; aluminium ores; p. (1954) *50,000*.
Tilburg, *t.*, N. Brabant, Neth.; nr. Breda; flourishing woollens, mnfs., tobacco, leather; p. (estd. 1955) *128,000*.
Tilbury, *t.*, Essex, Eng.; on N. bank of R. Thames, 20 m. E. of London; docks; shoe mftg.
Till, *R.*, N. Northumberland, Eng.; trib. of R. Tweed; length 32 m.
Tillicoultry, *burgh*, Clackmannan, Scot.; on Devon R.; woollen, worsted, paper mkg.; p. (1951) *3,818*.
Tilmanstone, *mining vil.*, Kent, Eng.; on N. flank of N. Downs, 4 m. S.W. of Deal; on Kent coalfield, coal despatched by overhead cable to Dover.
Timaru, *t.*, S.I., N.Z.; wool, milling, skins; p. (estd. 1958) *25,500*.
Timbuktu, Fr. Sudan, Africa; 8 m. N. of the N. bend of R. Niger, on border of the Sahara desert; agr. tr. ctr.; p. (1957) *7,000*; flourished as comm. mart and Moslem ctr., 14–16th cent.
Timisoara, *t.*, W. Romania; impt. comm. and industl. ctr., tobacco, petroleum, paper; fortress, cas., cath.; p. (1956) *142,251*.
Timmins, *t.*, Ontario, Canada; gold; p. (1941) *28,790*.
Timor, *Portuguese possession*, E. Indies; consists of E. part of T.I. in Malay Archipelago, together with Ambeno, Pulo Cambing and Pulo Jako; ch. products coffee, sandalwood, copra, wax; cap. and ch. spt. Dili; total a. 7,330 sq. m.; p. (1936) *463,996*.
Timor Archipelago, *gr. of Is.*, Indonesia; of which the lgst. is Timor (E. part Portuguese; remainder Indonesian); total a. 24,450 sq. m.; fishing, exp. copra; p. *1,657,376*.
Timor Sea, that part of the Indian Ocean N.W. of W. Australia, and S. of Timor I.
Timsah, *L.*, Egypt, N.E. Africa; sm. L. midway along Suez Canal; formerly used for recreational purposes by Brit. garrison in Canal zone.
Tinnevelli, *t.*, Madras, India; rice, coffee, cotton, tobacco; p. (1941) *60,676*.
Tinogasta, *t.*, Catamarca prov., Argentina; in E. foot-hills of Andes 120 m. N.W. of Catamarca; impt. copper-mines.
Tintagel, *vil.*, Cornwall, Eng.; ruined cas.; reputed birthplace of King Arthur; tourists.
Tinto, *R.*, Huelva, Spain; flows W. to the Atlantic; length 65 m.
Tinto Hills, Lanark, Scot.; highest peak 2,300 ft.
Tipperary, *inland co.*, Munster, Ireland; a. 1,659 sq. m.; divided into Tipperary co. (N.R.), p. (1956) *55,689*, and Tipperary co. (S.R.), p. (1956) *73,542*.
Tipperary, *t.*, Tipperary, Ireland; 29 m. S.E. Limerick; mftg., butter, lace; p. (1951) *5,148*.
Tipton, *t.*, *mun. bor.*, Staffs, Eng.; 2 m. W. of W. Bromwich; metals, engin.; p. (1951) *39,382*.
Tiranë, *t.*, *cap.*, Albania; univ.; textiles, metallurgy; p. (estd. 1950) *64,300*.
Tiraspol, *t.*, Moldavian S.S.R.; on R. Dniester; heat and power-sta. recently constructed; milling tobacco; p. (1959) *62,000*.
Tire, *t.*, Aydin, Turkey; raisins, tobacco, cotton; p. *22,032*.
Tiree, *I.*, Inner Hebrides, Scot.; off cst. of Mull; sm. fresh-water lochs and Scandinavian forts.
Tirlemont (**Flemish Thienen**), *t.*, ctr. of Belgian sugar-refining; Brabant, Belgium; machin., woollens, leather; captured by Marlborough, 1705; p. (1947) *22,348*.
Tiruchirapalli, *formerly* **Trichinopoly**, *t.*, Madras, India; on R. Cauvery; cigars, goldsmith's wk.; p. (1951) *218,921*.
Tisa (**Tisza**), *R.*, U.S.S.R., Hungary, Jugoslavia; rises in E. Carpathians, flows N.W. to Cop, thence S. across flat, agr. plain of Gr. Arföld into R. Danube 45 m. below Novi Sad; approx. length 600 m; navigable in part.
Titicaca, *L.*, Bolivia, Peru, S. America; between 2 ranges of the Andes, on borders of Bolivia and Peru; 12,645 ft. above the sea; a. 3,200 sq. m.; average width 27 m. length 101 m.; almost cut in two by peninsula of Copacabana; nearly 700 ft. deep on E. side, shallow W. and S.; contains numerous Is., lgst. Titicaca; it is drained on the S. side by the R. Desaguadero.
Titograd (**Podgorica**), *t.*, Montenegro, Jugoslavia; nr. Albanian frontier; p. (1953) *16,324*.
Tiumen, *t.*, Siberia, R.S.F.S.R.; N.W. of Tobolsk; leather, carpets.
Tiverton, *mkt. t.*, *mun. bor.*, Devon, Eng.; 14 m. N. Exeter; lace and silk mftg.; p. (1951) *10,869*.
Tivoli, *t.*, Rome, Italy; sulphur baths.
Tiztuzu, *t.*, Algeria, N. Africa; admin. ctr.; livestock, honey, oil, corn; p. *40,526*.
Tlaxcala, *st.*, Mexico; adjoining Puebla; a. 1,555 sq. m.; cap. Tlaxcala; p. (1950) *284,226*.
Tlemcen, *t.*, Algeria, N. Africa; exp. textiles, carpets, ostrich feathers, olive oil, grain and onyx; p. (1948) *69,668*.
Tobago, *I.*, T.W.I.; belonged to Britain since 1762, administered by Trinidad; name said to derive from fact that Carib natives were addicted to tobacco; exp. sugar, rum, rubber, cotton, tobacco, coffee, etc.; cap. Scarborough on S. side; a. 116 sq. m.; p. (1946) *27,161*, nearly all Negroes.
Tobarra, *t.*, Spain; industl.; p. *13,110*.
Tobata, *ind. c.*, *spt.*, N. Kyushu, Japan; on S. shore of Shimonoseki Strait at ent. to Tokai Bay; iron and steel ind., engin., sugar-refining, glass, bricks; lge. mod. coal docks; p. (1947) *84,260*.
Tobermory, *burgh*, Argyll, Scot.; on I. of Mull at N. entrance to Sound of Mull; p. (1951) *692*.
Tobol, *R.*, W. Siberia, R.S.F.S.R.; trib. of R. Irtysh; length 500 m.
Tobolsk, *t.*, W. Siberia, R.S.F.S.R.; on R. Irtysh; fishery inds. and tr.; p. *23,500*.
Tobruk, *spt.*, Libya, N. Africa; on cst. 220 m. E. of Benghazi; p. (estd. 1951) *2,500*.
Tocantins, *R.*, provs. Pará and Goiaz, Brazil; flows N. through the Pará estuary to the Atlantic; navigation interrupted by rapids 200 m. above Pará; length, 1,700 m.
Toce, *R.*, N. Italy; rises in Lepontine Alps, flows S. and S.E. into L. Maggiore; valley used by trunk rly. from Milan to Berne as S. approach to Simplon Tunnel; length, 54 m.
Tocopilla, *spt.*, Chile; exp. nitrate, copper ore, sulphates, iodine; p. (1940) *17,287*.
Todmorden, *mkt. t.*, *mun. bor.*, W.R. Yorks, Eng.; nr. source of R. Calder, 6 m. N.E. of Rochdale; cottons, machin.; p. (1951) *19,072*.
Togoland, W. Africa; former German col., administered by Britain and France as trust terr.; dyewoods, rubber, coffee, cocoa, fruits, weaving, pottery, straw plaiting; a. 33,700 sq. m.; p. (1956) (British part) *423,000*. (Fr. part) *565,780*. Brit. part integrated in Ghana 1957. Fr. part became rep. 1958 and indep. st. April 1960.
Tokat, *t.*, Turkey; on Tokat I., N. of Sivas; copper and yellow leather mftg.; Armenian massacre 1895; p. *20,153*.
Tokay, (**Tokaj**), *t.*, Hungary; vineyard dist., Tokay liqueur wines are well known; p. *5,069*
Tokelau or Union Isles, *gr.* of 3 Is., Brit. col., Pac. Oc.; 300 m. N. of W. Samoa administered by N.Z.; a. 4 sq. m.; p. (1958) *1,690*.
Tokio, *c.*, *spt.*, *cap.*, Japan; world's 2nd lgst c.; on Tokio Bay, S.E. cst. of Honshu; univ., imperial palace; gr. comm. ctr; silks, machin., lacquer, pottery, "chlorela" artificial food production; p. (1957) *8,534,993*.
Tokushima, *t.*, E. cst. Shikoku, Japan; cottons; p. (1947) *88,520*.
Tolbukhin, *t.*, Bulgaria, former Dobrich; p. (1956) *42,815*.

Toledo, *prov.*, Spain; mountainous; agr., vineyards, stock-raising; a. 5,925 sq. m.; p. (1949) *532,278.*

Toledo, *ancient c., cap.*, Toledo, Spain; on R. Tagus; with cath., and many specimens of Gothic, Moorish and Castillian architecture in its picturesque narrow streets; famous Alcázar palace citadel; sword-mkg. still flourishes; p. (1949) *42,598.*

Tuy, *t.*, Spain; cath.; mineral springs; p. *13,500*.

Tuzla, *t.*, Jugoslavia; salt-springs, coal, timber, livestock, grain, fruit; p. (1953) *31,397*.

Tver, *see* **Kalinin.**

Tweed, *R.*, S.E. Scot.; rises in Peebles, and reaches sea at Berwick; dividing Berwick from the Eng. co. Northumberland; famous for its salmon fisheries; length 97 m.

Twelve Pins, star-shaped *mtn. range*, Galway, Ireland; Benbaum, alt. 2,395 ft.

Twickenham, *mun. bor.*, Middx., Eng.; on N. bank of R. Thames, S.W. of London; Rugby Football Union ground; includes Teddington and Hampton, (*q.v.*); p. (1951) *105,645*.

Tyldesley, *t.*, *urb. dist.*, Lancs, Eng.; 4 m. S. of Bolton; mnfs.; p. (1951) *18,096*.

Tyler, *c.*, Texas, U.S.A.; fruit, livestock, cotton; p. (1950) *38,968*

Tyne, *R.*, Durham and Northumberland, Eng.; formed by junction of N. and S. Tyne at Hexham; flows E. to sea at Tynemouth and S. Shields; valley gives easy route across mtns. from Newcastle to Carlisle; forms a continuous harbour (with shipbldg. and other wks.) from Newcastle to Tynemouth; length 80 m.

Tynemouth, *t.*, *spt. co. bor.*, Northumberland, Eng.; at mouth of R. Tyne, on its N. bank; inc. in its a. the townships of Tynemouth, N Shields, Cullercoats, Chirton, Preston, Percy Main, E. Howden and New York; favourite wat. pl. with old priory and cas.; gd. harbour; fishing, ship repairing, coal bunkering, laminated plastics; p (1951) *66,544*.

Tyneside, *lge. conurbation*, S.E. Northumberland, N.E. Durham, Eng.; comprises highly industl. built-up a. astride R. Tyne for 14 m. from its mouth to Scotswood Bridge; huge exp. of coal, abroad and round Brit. csts.; shipbldg., heavy engin.; a. 90 sq. m.; p. (1951) *835,332*. *See also under* **Gateshead, Newcastle-on-Tyne, S. Shields, Tynemouth, Jarrow, Wallsend, Felling, Gosforth, Longbenton, Newburn, Whickham, Whitley Bay.**

Tyre, or Sur, *t.*, Lebanon, S.W. Asia; on W. cst.; p. *9,455*.

Tyrol, *mountainous region*, Alps, Europe; falls within Austria and Italy; between Munich and Verona, which are linked by the Brenner Pass; the Tyrol embraces all the highest peaks of the Austrian Alps, culminating in the Ortler Spitz; two-fifths forest; cap. Innsbruck; mtn. pasture, vineyards, silk inds.; a. 4,884 sq. m.; p. of Austrian T. (1951) *427,465*.

Tyrone, *inland co.*, N. Ireland; agr. and dairying; cap. Omagh; a. 1,260 sq. m.; p. (1951) *132,049*.

Tyrrhenian Sea, part of Mediterranean between Italy and Corsica, Sardinia and Sicily.

Tyumen, *t.*, R.S.F.S.R.; on R. Tura, between Molotov and Omsk; engin., textiles; p. (1959) *150,000*.

Tzuliuching, *c.*, Szechwan, China; salt, petroleum; p. (estd. 1945) *291,791*.

Tzuyang, *see* **Yenchow.**

U

Uanapú or Anapú, *R.*, Brazil; trib. of R. Pará; length 400 m.

Ubangi, *R.*, central Africa; trib. of R. Congo; with R. Congo forms W. bdy. between Fr. Equatorial Africa and Belg. Congo; length 1,400 m.

Ubangi-Shari, *see* **Central African Republic.**

Ube, *spt.*, S. Honshu, Japan; p. (1950) *128,569*.

Ubeda, *t.*, Jaen, Spain; on R. Guadalquivir; in vineyard and fruit-growing dist.; old walls; p. *31,093*.

Uberaba, *t.*, Minas Gerais, Brazil; cattle, maize, manioc, rice, sugar; p. *33,786*.

Ubol, *t.*, E. Siam; p. *10,000*.

Ucayali, *R.*, Peru, S. America; head-stream of R. Amazon; over 1,400 m. long, navigable for 1,000 m.

Uccle, *t.*, Belgium; nr. Brussels; industl.; p. (1947) *57,595*.

Ucha Reservoir, *see* **Moscow Sea.**

Uckfield, *mkt. t.*, *rural dist.*, E. Sussex, Eng.; 8 m. N.E. of Lewes; p. (rural dist. 1951) *43,132*.

Udaipur, *t.*, Rajasthan, India; on bank of lge. L. amid wooded hills, 2,469 ft. above sea-level; marble palace of the Maharajah; temple of Siva; embroidery, cotton cloth; p. (1941) *59,648*.

Uddevalla, *spt.*, S. Sweden; on fjord connected with L. Vänern; butter factories, porcelain wks.; p. (1951) *24,922*.

Udi, *t.*, S. Nigeria, Brit. W. Africa; 100 m. N. of Pt. Harcourt; impt. mining ctr. on Enugu coal-field; linked by rail to Kaduna and Pt. Harcourt.

Udine, *t.*, N.E. Italy; between Alps and G. of Venice; old cas. (now barracks); silk, velvet, and cotton inds.; p. (1951) *72,134*.

Uddingston, *t.*, Lanark, Scot.; R. Clyde; 7½ m. E.S.E. of Glasgow; collieries, jam factory; p. 8,400.

Udmurt, *autonomous Soviet Socialist Rep.*, part of R.S.F.S.R., U.S.S.R.

Uelzen, *t.*, Lower Saxony, Germany; on Lüneberger Heath; machin., chemicals, sugar; p. (estd. 1954) *24,400*.

Ufa, *t.*, R.S.F.S.R.; in W. Urals at confluence of Rs. Ural and Belaia; iron and copper foundries and machin. wks., saw-mills, textiles; p. (1959) *546,000*.

Uganda, *Brit. prot.*, E. Central Africa; ch. R. Nile; Ruwenzori Range, Mt. Elgon on Kenya border; Ls. inc. parts of Victoria, Edward, Albert, Rudolf and whole of Kioga; moderate rainfall; cotton, rubber, cocoa, coffee, ivory, hides, and skins, copper; connected by rail with Mombasa; cap. Kampala; a. 93,981 sq. m. inc. 13,680 sq. m. swamp and water; p. (estd. 1958) *5,678,900* (inc. *9,000* Europeans).

Uinta, *mtn. range*, Utah, U.S.A.; its highest points are Emmons (13,694 ft.), Gilbert Peak (13,687 ft.), and Wilson (13,300 ft.).

Uist, N., *I.*, Outer Hebrides, Inverness, Scot.; separated from I. of Skye by Little Minch; length, 17 m., width 3–13 m.

Uist, S., *I.*, Outer Hebrides, Inverness, Scot.; most S. lge. I. of Outer Hebrides gr.; length 22 m., width 8 m.

Uitenhage, *t.*, C. of Gd. Hope, S. Africa; summer resort, fruit, wool, rly. wks.; p. *28,000*.

Ujiji, *vil.*, in sm. terr. same name (a. 920 sq. m.) on E. shore L. Tanganyika, E. Africa; where Stanley found Livingstone, 1871; p. *1,000*.

Ujiyamada, *t.*, Japan; sacred c. of Shintoism; p. (1947) *63,093*.

Ujjain, *t.*, Madhya Pradesh, India; sacred c. and formerly cap. of Malwa; p. (1951) *129,817*.

Ujpest, *t.*, Hungary; nr. Budapest; p. *76,000*.

Ukerewe, *I.*, on L. Victoria, Central Africa.

Ukraine, *constituent rep.*, U.S.S.R.; fertile "black earth" region; agr., wheat, maize, barley; tobacco, sheep, pigs; minerals, coal, iron-ore, manganese; mnfs., flour, sugar, brewing, chemicals, smelting, hydro-elec. generation; cap. Kiev; a. 225,000 sq. m.; p. (1959) *41,893,000*.

Ulan Bator, *t.*, *cap.*, Independent Rep. of Outer Mongolia; formerly known as Urga; engin., textiles; p. (1951) *70,000*.

Ulan-Ude, *t.*, Siberia, R.S.F.S.R.; on L. Baikal; engin., textiles, sodium sulphate; p. (1959) *174,000*.

Ulcinj, *ancient c.*, Montenegro, Jugoslavia; tobacco, olive oil; p. *5,000*.

Uleåborg (Oulu), *spt.*, Finland; on G. of Bothnia; shipbldg., exp pitch, timber, hides, butter; p. (1946) *34,105*.

Ulhasnagar, *c.*, Bombay, India; new c. built for refugees from Pakistan; p. (1951) *80,861*.

Ullapool, *t.*, Ross and Cromarty, Scot.; on N. shore of Loch Broom.

Ullswater, *L.*, on border Cumberland and Westmorland, Eng.; 8 m. long; outlet by R. Eamont to the Eden.

Ulm, *c.*, Baden-Württemberg, W. Germany; on R. Danube; cath.; machin., textiles, cars, radios; rly. junction; p. (estd. 1954) *73,900*.
Ulster, *anc. Irish prov.*; comprised nine counties: six of these (Down, Antrim, Armagh, Fermanagh, Londonderry and Tyrone) now form Northern Ireland, a. 5,238 sq. m.; p. (1951) *1,370,709*; three counties (Cavan, Monaghan, Donegal) now form prov. of U. in Rep. of Ireland; largely agr., a. 3,123 sq. m.; p. (1956) *235,863*.
Ulva, *I.*, Argyll, Scot.; off W. cst. of Mull; 5 m. long.
Ulverston, *t.*, *urb. dist.*, N.W. Lancs, Eng.; nr. Morecambe Bay; paper-mills, hardware mftg.; iron, corn, brewing; p. (1951) *10,076*.
Ulyanovsk, *t.*, R.S.F.S.R.; on R. Volga; engin., textiles; p. (1959) *205,000*.
Uman, *t.*, Ukrainian S.S.R.; iron; p. (1954) *50,000*.
Umbria, *region*, Italy; between Tuscany and the Marches, and Rome and the Abruzzi; comprising the prov. of Perugia; mtnous., fertile valleys; a. 3,271 sq. m.; p. (1951) *802,332*.
Umeå, *R.*, Sweden; flows S.E. to the G. of Bothnia; length 250 m.
Umeå, *t.*, Sweden; at mouth of R. Umeå; timber tr.; p. *14,971*.
Umtali, *t.*, S. Rhodesia; impt. distr. ctr., timber, fruit, veg.; p. *22,500* (incl. *8,000* Europeans).
Umtata, *c.*, S. Africa; cath.; veg. dehydration, fruit canning; rly. terminus; p. *7,329*.
Una, *R.*, N. Jugoslavia; trib. of R. Sava.
Unalaska, *lge. I.*, Alaska, U.S.A.; in Aleutian gr.; mtnous., treeless; ch. pt. of Bering Strait.
Uncia, *t.*, Oruro dep., Bolivia; alt. 13,000 ft. in E. Cordillera of Andes, 60 m. S.E. of Oruro; site of impt. Patino tin-mines.
Ungava Bay, *arm of Hudson Strait*, projecting into Labrador, N.E. Canada; lge. forests in the S., minerals abundant, recent exploitation of impt. medium and low-grade iron deposits.
Union of South Africa—*see* **South Africa, Union of.**
Union of Soviet Socialist Republics, *cty.*, Europe, Asia; stretches across two continents from the Baltic Sea to the N. Pac. Oc. and from the Arctic to the Black Sea, bounded on the W. by Finland, Poland, Hungary and Romania, in the S. by Turkey, Persia, Afghanistan, China, Mongolia and Manchuria; The Union consists of 15 Union reps.; R.S.F.S.R., Ukrainian, Byelorussian, Azerbaydzhan, Georgian, Armenian, Turkmen, Uzbek, Tadzik, Kazakh, Kirghiz, Moldavian, Estonian, Lithuanian and Latvian S.S.R.'s. These reps. are divided into 126 terrs. and regions which include 18 autonomous reps., 10 autononomous regions and 10 national areas. European portion, separated in the E. from Asia by Ural Mtns., is a vast low plain with Caucasus Mtns. in the S. In Asia the ctr. and N. is occupied by the vast plain of Siberia, rising in the S. to lofty mtn. ranges, Pamirs, Tien Shan, Sayan, Yablonovy, Stanovoi, etc Rs. are impt.: Dnieper, Volga, Ural and Don in Europe flowing southwards; Ob, Yenisei and Lena in Asia flowing northwards into Arctic Ocean; and Amur into Pac. Oc. N. and central regions—long, cold winters; short, cool summers, S. regions—temperate and sub-tropical; desert and semi-desert E. of Caspian Sea. In N. tundra and immense forests with lumbering and associated inds.; agr., wheat, oats, barley, rye, flax, potatoes, sugar-beet, tobacco, cotton, silk, rubber, vines, tea, rice; rich fisheries; impt. minerals; coal, oil, lignite, iron ore, manganese, chrome ore, platinum, copper, lead, zinc, nickel, uranium, asbestos, mica, apatite, nepheline bauxite; many hydro-elect. plants inc. lgst. hydro-elect. plants in Europe, developed 2,362,000 h.p.; 2 atom-driven power stas.; highly developed inds. inc. metallurgical prods., textiles, chemicals, cellulose-paper and lumbering, leather goods, foodstuffs preparation. Ch. spts. Leningrad, Murmansk, Arkhangelsk, Vladivostok, Odessa, Sevastopol, Novorossik, Batumi; cap. Moscow; a. 8,708,070 sq. m.; p. (1959) *208,826,000*.
Union City, *t.*, N.J., U.S.A.; p. (1950) *55,537*.
Uniontown, *bor.*, Penns., U.S.A.; glasswks., iron foundries; p. (1950) *20,471*.
United Arab Republic, Union of Egypt and Syria (Feb. 1958); cap. Cairo
United Arab States, Federation of United Arab Republic and Yemen.
United Kingdom, *cty.*, N.W. Europe; separated from continent of Europe by Eng. Channel; consists of Gr. Britain (Eng., Wales, Scot.) and N. Ireland. *See under separate headings.*
United Provinces, India. *See* **Uttar Pradesh.**
United States, *federal rep.*, N. America; ch. physical features: Great Ls., lgst. freshwater a. in the world; ch. Rs.: Mississippi–Missouri, Rio Grande del Norte, Colorado, Hudson, Susquehanna, Savannah, Columbia; ch. mtns.; Rocky Mtns., Coast Range, Sierra Nevada, Appalachian Mtns.; Great Basin, great plains, Piedmont plateau, coastal plains; climate in N.E.—cool, temperate, rainfall all year round, warm summers, cold winters; in central plains and Gr. Basin—continental climate of extremes; in N.W.—cool temperate with abundant rainfall warm summers, cold winters; in S.W. on Pacific cst.—Mediterranean climate of very warm summers and drought, mild winters with rainfall, dense fogs off Pacific cst.; in S. and S.E. sub-tropical, hot summers, mild winters with abundant rainfall in the S.E. decreasing towards the W.; ch. inds.: agr., maize, wheat, oats, etc., fruit, potatoes, hay, alfalfa, cane- and beet-sugar, cotton, tobacco; pastoral farming, ranching, dairying, sheep, wool, cattle, pigs, horses; lumbering, timber, wood-pulp; fishing off Grand Bank, Newfoundland, for cod, etc., and in W. for salmon; minerals: coal, petroleum, natural gas, phosphate, iron ore, copper, lead, gold, silver, zinc, aluminium, mercury; mftg. of all kinds; commerce; comprises 50 sts. and Dist. of Columbia; cap. Washington; lgst. ts. New York, Chicago, Philadelphia; total land a. (inc. extra-territorial possessions); a. *3,608,787* sq. m.; p. estd (1958) *150,858,361*.
University City, *t.*, Mo., U.S.A.; p. (1950) *39,892*.
Unna, *t.*, N. Rhine-Westphalia, Germany; E. of Dortmund; coal-mining, machin., iron ind.; p. (estd. 1954) *27,500*
Unst, *I.*, Shetlands; most N. of gr.; length 12½ m.
Unstrut, *R.*, Saxony, Germany; trib. of R. Saale, length 110 m.
Untersee, W. portion of L. of Constance.
Unterwalden, *old can.*, Switzerland; now subdivided into Obwalden and Nidwalden; dairying, fruit and livestock; ch. ts. are Sarnen and Stans.
Unter-Yberg, *vil.*, Switzerland; medicinal springs.
Upholland, *t.*, *urb. dist.*, Lancs, Eng.; 4 m. W. of Wigan; bricks; p. (1951) *6,314*.
Upper Austria, *prov.*, Austria; cap. Linz; a. 4,625 sq. m.; p. (1948) *1,190,834*.
Upper Nile, *prov.*, Sudan, N.E. Africa; cap. Malakal; a. 92,270 sq. m.; p. (estd. 1951) *852,200*.
Upper Seal Lake, Labrador, Newfoundland, Canada.
Upper Volta, *aut. rep.* within Fr. Community, W. Africa; cap. Ouagadougou; a. 109,940 sq. m.; p. (estd. 1957) *3,226,000*.
Uppingham, *mkt. t.*, *rural dist.*, Rutland, Eng.; 4 m. S. of Oakham; famous school founded in 1584 by Archdeacon Robert Johnson (1540–1625); p. (rural dist. 1951) *5,416*.
Uppsala, *co.*, E. Sweden; N. of L. Mälar; cap. Uppsala; a. 2,056 sq. m.; p. (1950) *154,677*.
Uppsala, *t.*, cap. Uppsala, Sweden; on R. Sala; 45 m. from Stockholm; univ., cath.; p. (1951) *63,072*.
Upton-on-Severn, *mkt. t.*, *rural dist.*, Worcs, Eng.; 5 m. N.W. of Tewkesbury; p. (rural dist. 1951) *15,340*.
Ur, *ancient* Chaldean *c.* Iraq; 130 m. W.N.W. of Basra; ruins; flourished about 3,000 B.C.
Ural Mtns., R.S.F.S.R.; mtns. separating Asia from Europe; 2,050 m. long; highest summit, Tolposis Mtn., 5,430 ft.
Ural, *R.*, R.S.F.S.R.; flows S.W. and S. to the Caspian Sea; length 1,000 m.
Uralsk, *t.*, Kazakh S.S.R.; on R. Ural; grain-trading and cattle-mart. ctr.; flour, leather, woollens, iron-ware; p. (1959) *105,000*
Urambo, *t.*, Tanganyika, Brit. E Africa; a ctr. of the E. African groundnuts development by the British Overseas Food Corporation.
Uranium City, N. Saskatchewan, Canada; nr. N. shore of L. Athabasca, ctr. of Beaverlodge uranium-mining a.; founded 1951; p. (1953) approx. *500*.
Urbana, *c.*, Ill., U.S.A.; on Embarrass R.; seat of st. univ.; p. (1950) *22,834*.
Urbana, *c.*, Ohio, U.S.A.; mftg.; p. (1950) *9,335*.
Urbino, *t.*, N. Marche, Italy; cath., univ.; silk cheese, olive oil; p. *20,375*.

Ure, *R.*, N.R.; florks, Eng. Yows E. and S.E. to the Swale to form the Ouse; length 50 m.
Ures, *t.*, Lower Cal., Mexico; p. *2,981*.
Urfa, *t.*, Turkey; nr. Syrian border; gd. local tr.; p. (1945) *36,635*.
Urga, *see* **Ulan Bator.**
Uri, *can.*, Switzerland; S. of L. of Lucerne; forest and mtn.; traversed by St. Gotthard Rly. and R. Reuss; cap. Altdorf; a. 415 sq. m.; p. (1950) *28,556*.
Urmia (**Rizaieh**), *t.*, Azerbaijan, Persia; birthplace of Zoroaster; p. *64,000*.
Urmia, L. of, nr. Tabriz, N.W. Persia; 85 m. by 30 m.; salt and shallow.
Urmston, *urb. dist.*, Lancs, Eng.; p. (1951) *39,233*.
Urubamba, *R.*, Peru, S. America; rises in E. Cordillera of Andes; forms one of head streams of R. Amazon; length 350 m.
Uruguaiana, *t.*, Brazil; on R. Uruguay; cattle ctr.; jerked beef, soap, candles; p. *22,000*.
Uruguay, *rep.*, S. America; climate, temperate; moderate rainfall; vegetation temperate and sub-tropical grasslands; language, Spanish; religion, R. C.; cattle- and sheep-rearing, wheat, olives, grapes, gold, textiles; cap. Montevideo; a. 72,153 sq. m.; p. (estd. 1956) *2,668,130*.
Uruguay, *R.*, S. America; rises in S. Brazil, and flows between Argentina and Brazil and Uruguay to Rio de la Plata; length 850 m.
Urumchi, *see* **Tihwa.**
Urundi, *see* **Ruanda-Urundi.**
Urup, *I.*, Kurile gr., Pac. Oc.; 50 m. long; 12 m. wide.
Usa, *R.*, U.S.S R.; flows E. from the Urals to the Pechora; length 220 m.
Usedom (**Uznam**), *I.*, Baltic Sea; off mouth of R. Oder; since 1945 the E. part belongs to Poland, the W. (the larger part) to Germany; I. is 30 m. long and 14 m. wide.
Ushak, *t.*, Turkey; connected by rail with Izmir; noted for pile carpet-weaving.
Ushant, *I.*, off cst. of Finisterre, France; at entrance to Eng. Channel; it was off Ushant that Lord Howe gained his great naval victory on the "glorious first of June," 1794.
Ushuaia, *t.*, Argentina; most southerly t. in world; sheep farming, timber, furs; freezing plant; p. *1,200*.
Usk, *R.*, S. Wales and Monmouth, Eng.; flows S. to Bristol Channel; length 57 m.
Usküdar (**Scutari**), *t.*, Turkey; on the Bosporus, opposite Istanbul; silks, cottons, muslin; p. (1945) *55,000*.
Uspallata Pass, Andes, Argentina; used by the Mendoza–Valparaiso Transandine rly.
Ust Kamenogorsk, *t.*, Kazakhstan, U.S.S.R.; lead refining; impt H.E.P. sta. near by on R. Irtish; p. (1959) *117,000*.
Ustica, *I.*, Italy; hilly; fruit, olives, grain, osiers; fishing; a. 3 sq. m.
Usti Nad Labem, *t.*, Czechoslovakia; on the Elbe; chemicals, coal; p. (1957) *64,798*.
Ustka (**Stolpmünde**), *spt.*, Poland; on Baltic Sea; p. *2,807*.
Usumacinta, *R.*, Mexico and Guatemala, Central America; trib. of R. Tabasco; length 400 m.
Usumbura, *t.*, Ruanda-Urundi, E. Belg. Congo; cotton ginnery, soapwks.; exp. cotton, coffee, hides; p. (estd. 1949) *17,188*.
Usuri, *R.*, Manchuria, N. China; flows to R. Amur; length 340 m.
Utah, *W. st.*, U.S.A.; Mormons form about 91% of the church membership of the st.; farming, wheat maize, barley rye, livestock, sugar-beet, fruits; copper, silver, lead, gold, coal, uranium, vanadium; fruit-canning; cap. Salt Lake City; a. 84,916 sq. m.; p. (1950) *688,862*.
Utah, *L.*, U.S.A.; 23 m. long and 4,400 ft. above sea-level, discharges by R. Jordan to the Gr. Salt L.
Utakamand (**Ootacamund**), *t.*, Madras, India; summer cap. of Madras government; on a plateau 7,230 ft. above sea-level; p. (1941) *29,850*.
Utica, *c.*, N.Y., U.S.A.; on Mohawk R.; clothing and other mnfs.; p. (1950) *101,531*.
Utiel, *t.*, Spain; W. of Valencia; brandies, wines; p. *12,411*.
Utrecht, *prov.*, Neth.; between Guelderland and N. and S. Holland; fertile agr., stock-raising and horticultural dist. S. of the Zuider Zee; a. 526 sq. m.; p. (1951) *195,121*.
Utrecht, *c.*, Neth.; on Old R. Rhine; univ., cath.; chemical and cigar factories; printing, machin., woollens, silks, velvets; p. (estd. 1955) *244,000*.
Utrera, *t.*, Spain; S.E. of Seville; industl.; p. *30,440*.
Uttar Pradesh, *st.*, India; Himalayas on N. bdy., drained by Ganges and Jumna; splendid irrigation; wheat, rice, millet, barley, maize, cotton, sugar, oil-seeds; ch. ts. Allahabad, Lucknow (cap.), Varanasi, Cawnpore, Agra, Meerut; a. 113,410 sq. m.; p. (estd. 1957) *63,215,742*.
Uttoxeter, *t.*, *urb. dist.*, Staffs, Eng.; on R. Dove, 10 m. N.W. of Burton-on-Trent; machin., biscuit mftg.; p. (1951) *7,440*.
Uusimaa, *dep.*, Finland; a. 4,435 sq. m.; cap. Helsinki; p. (1950) *665,313*.
Uvira, *pt.*, Belg. Congo, Central Africa; on N.W. cst. of L. Tanganyika; exp. coffee, cotton, hides; bricks, cotton ginning.
Uxbridge, *mkt. t.*, *mun. bor.*; Middx. Eng.; on R. Colne, 14 m. W. of London; residtl.; light inds, film studio; p. (1957) *60,780*.
Uzbekistan, *constituent rep.*, U.S.S.R.; intensive farming based on irrigation; rice, cotton, fruits, silk, cattle, sheep; cap. Tashkent; a. 159,170 sq. m.; p. (1959) *8,113,000*.
Uzen, (Gr. and Little), *Rs.*, U.S.S.R., flowing 250 m. to the Caspian Sea.
Uzgen, *region*, Kirghiz, S.S.R., U.S.S.R.; coal cotton, engin.
Uzhgorod, *t.*, Ukrainian S.S.R.; engin.; p. (estd.) *25,000*.
Uzhoi Cape, *promontory*, on Ob. Bay, N. Siberia, U.S.S.R.

V

Vaal, *R.*, S. Africa; rises in Drakensberg Mtns., and flows between the Transvaal and Orange Free State to join the Orange R. nr. Kimberley; length 560 m.
Vaasa (**Vasa**), *dep.*, Finland; cap. Vaasa; a. 15,062 sq. m.; p. (1950) *608,100*.
Vaasa, *t.*, *pt.*, *cap.*, Vaasa Finland; on G. of Bothnia; oats, butter, cattle exp.; p (1950) *35,030*.
Vác, *t.*, Hungary; on R. Danube; chemicals, surveying instruments; p. *22,277*.
Vadsö, *t.*, on Varanger Fjord. N. Norway; p. *2,068*.
Vaduz, *t.*, *cap.*, Liechtenstein; p. (1950) *2 735*.
Váh, *R.*, Czechoslovakia; trib. of R. Danube; length 200 m.
Val de Chiana, *see* **Chiana, Val de.**
Valais, *can.*, Switzerland; comprising upper valley of R Rhône; surrounded by high mtns.; sparsely populated; cap. Sion; a. 2,021 sq. m.; p. (1950) *159,178*.
Valdai Hills, U.S.S.R.; N.W. of Moscow; highest summit 1,100 ft
Valdepeñas, *t.*, Central Spain; mineral springs, wine; p. *26,000*.
Valdivia, *prov.*, S. Chile; cap. Valdivia; a. 7,721 sq. m.; p. (1957) *279,215*.
Valdivia, *t.*, cap. Valdivia, S. Chile; on R. Calle-calle nr. the sea (pt. Corral); brewing and tanning; p. (1952) *45,138*.
Valdosta, *t.*, Ga., U.S.A.; rly. ctr., cotton mills, light engin.; p. (1950) *20,046*.
Valence, *t.*, cap. Drôme, France; on left bank of R. Rhône; metal-founding, silks, hosiery, vineyards; p. (1954) *41,470*.
Valencia, *prov.*, Spain; on Mediterranean; agr., vineyards, olive-, fig-, and orange-growing, stock-rearing, silk, tapestry, carpet mftg.; cap. Valencia; a. 4,239 sq. m.; p. (1950) *1,347,912*.
Valencia, *t.*, cap. Valencia, Spain; on R. Turia, 3 m. from the Mediterranean; univ., museum, cath.; mnfs., linen, leather, cigars, silks, exp. wine, fruits, corn, etc.; p (1950) *509,075*.
Valencia, *I.*, S.W. Kerry, Ireland; 6 m. by 2 m.
Valencia, *t.*, Venezuela, S. America; cattle-raising, foundries, tanning, cottons, tobacco, coffee, sugar, beans; p. (1950) *88,674*.
Valencia, *L.*, Venezuela; a. 216 sq. m.; surrounded by swampy flats used for cattle-grazing.
Valenciennes, *fortfd. t.*, Nord, France; on R. Escaut; famous for lace; metallurgical inds., starch, chemicals, etc., coal, iron; p. (1954) *43,434*.
Valetta, *see* **Valletta.**
Valladolid, *prov.*, Central Spain; agr., vineyards, livestock, mnfs.; cap. Valladolid; a. 3,155 sq. m.; p (1950) *347,768*.
Valladolid, *t.*, cap. Valladolid, Spain; on R.

Pisuerga; seat of army corps, univ., cath.; thriving inds. and tr.; p. (1950) *124,212.*

Valladolid, Mexico, *see* **Morelia.**

Yamaguchi, *t.*, Honshu, Japan; p. (1947) *38,326*.
Yamal, *peninsula*, R.S.F.S.R.; jutting into Arctic Ocean.
Yambol, *t.*, Bulgaria; on R. Tunja; ruined mosque; corn tr.; p. (1956) *42,038*.
Yamethin, *dist.*, Upper Burma; teak forests, rice; ch. t. Yamethin; p. *9,291*.
Yamina, *t.*, Gambia, W. Africa; p. *6,700*.
Yamina or Nyamina, *t.*, Nigeria, W. Africa; on R. Niger; tr. ctr.
Yana, *R.*, Siberia U.S.S.R.; length 1,000 m.
Yanago, *t.*, Japan; business ctr.; cotton textiles; p. (1947) *50,027*.
Yanaon or Yanam, *prov.*, *t.* formerly Fr. Orissa, united with India 1954; p. (of prov.) (1948) *5,853*, (of t.) (1941) *5,711*.
Yanbu, *spt.*, Arabia; on E. cst. of Red Sea; pt. for Medina.
Yanco, *t.*, N.S.W., Australia; fruit, rice, dairying.
Yangchow (Chiangtu), *c.*, Kiangsu, China; on Grand Canal; comm. ctr.; p. (estd 1938) *127,392*.
Yangchu, *see* **Taiyuan**.
Yangtze-Kiang, *R.*, China; rises in plateau of Tibet, flows E. to E. China Sea, Pac. Oc. nr. Shanghai; traverses "Red Basin" of Szechwan, a deep gorge above Ichang, and finally a broad, level plain; many lge. cs. on its banks, Chungking, Ichang, Wuhan (Hankow, Hanyang, Wuchang), Nanking, Chinkiang; navigable by ocean-going vessels 1,800 m. to Ichang; total length 3,500 m.
Yannina, *see* **Ioánnina**.
Yaochow, *c.*, Kiangsi, China; nr. L. Po-Yang; local tr.; p. *56,500*.
Yao-Nan, *c.*, Yunnan, China; salt tr., musk, etc.; p. *65 000*.
Yaoundé, *cap.*, Cameroon Rep., W. Africa; p. (1955) *38,000*.
Yap, *I.*, Carolines, Pac. Oc., U.S.A. trusteeship; a. 79 sq. m.; cable sta.; p. (1958) *5,459*.
Yapura, *R.*, Brazil and Colombia, S. America; trib. of R. Amazon; navigable for 600 m.; length 1,500 m.
Yaracuy, *st.*, Venezuela; cap. San Felipe; p. (1941) *127,030*.
Yare, *R.*, Norfolk, Eng.; flows E. to N. Sea at Gorleston; length 50 m.
Yaritagua, *t.*, Venezuela; tobacco, coffee, cocoa, sugar; p. *5,399*.
Yarkand (Soche), *c.*, Turkestan (Sinkiang), China; tr. ctr.; wheat, rice, beans, fruit, carpets, textiles; p. (estd.) *60,000*.
Yarkand, *R.*, Turkestan (Sinkiang), China; trib. of Tarim R.; length 500 m.
Yarmouth, *spt.*, Nova Scotia, Canada; shipbldg., fisheries; p. (1956) *8,095*.
Yarmouth, *par.*, I. of Wight, Eng.; on N.W. cst., 8 m. W. of Newport; holiday resort; p. *893*.
Yarmouth, Great, *spt.*, *co. bor.*, Norfolk, Eng.; at mouth of R. Yare; holiday resort; fisheries, herrings, timber, shipyds.; p. (1951) *51,105*.
Yaroslavl, *t.*, R.S.F.S.R.; on R. Volga; cath.; synthetic rubber, engin., textiles, chemicals, sawmilling p. (1959) *406,000*.
Yarra, *R.*, Victoria, Australia; length 100 m.
Yartsevo, *t.*, R.S.F.S.R.; nr. Smolensk; cotton mills; p. *10,000*.
Yatschushiro, *t.*, Kyushu, Japan; p. (1947) *41,281*.
Yavary, *R.*, S. America; on Brazilian–Peruvian frontier; trib. of R. Marañon; length 450 m.
Yawata, *t.* Kyushu, Japan; iron and steel; p. (1947) *154,646*.
Yazoo, *c.*, Miss., U.S.A.; on Yazoo R; agr. tr.; p (1950) *9,746*
Yazoo, *R.*, Miss., U.S.A.; trib. of R. Mississippi; length 280 m.
Yazoo, *dist.*, Miss., U.S.A.; very flat, low-lying flood plain of R. Mississippi and R. Yazoo, extends 220 m. along R. from Memphis to Vicksburg; very fertile alluvial soil, but subject to disastrous floods; one of ch. cotton-growing dists. in U.S.A.
Yecla, *t.*, Spain; mkt.; p. *19,020*.
Yeddo, old name of Tokyo, Japan.
Yekabpils, *t.*, Kurland, Latvian S.S.R.; on R. Dvina.
Yeletz, *t.*, R.S.F.S.R.; on R. Sosna; grain and cattle tr.; p. (1959) *78,000*.
Yell, *I.*, Shetlands, Scot.; 17 m. long; p. *1,883*.
Yellow R., *see* **Hwang Ho**.
Yellow Sea, *arm* of Pac. Oc. between China and Korea; length 600 m., greatest width 400 m.
Yellowhead Pass, B.C., Alberta, Canada; most N. and lowest of main passes across Rocky Mtns.; carries Canadian National Rly. on route from Edmonton to Vancouver and Prince Rupert; summit alt. 3,700 ft.
Yellowknife, *t.*, N.W. Terr., Canada; on N. shore of Gr. Slave L.; ctr. of impt. gold-mining dist.; linked by air to Edmonton, Alberta.
Yellowstone, *L.*, Wyo., U.S.A.; 20 m. long, 15 m. wide; alt. 7,740 ft.; in Y. National Park.
Yemen, *kingdom*, Arabia; federated with United Arab Republic to form United Arab States, March 1958; barley, wheat, millet, coffee, hides; cap. Sana; a. 75,000 sq. m.; p. (estd. 1958) *8,000,000*
Yenakievo, *t.*, Ukrainian S.S.R.; coal, iron and steel; p. (1959) *92,000*.
Yenangyaung, *t.*, *R. pt.*, Burma; on left bank of R. Irrawaddy, 280 m. N. of Rangoon; ctr. of Burma oilfields.
Yenchow (Tzuyang), *t.*, Chekiang, China; S. of Hangchow.
Yenesei, *R.*, Siberia, R.S.F.S.R.; rises in Sayan Mtns., flows N. into Arctic Ocean; ch. tribs. Upper, Stony and Lower Tunguska Rs.; length 3,300 m.
Yentai, *see* **Chefoo**.

Yeo or Ivel, *R.*, Dorset, Somerset, Eng.; trib. of R. Parrett; length 24 m.
Yeovil, *t., mun. bor.*, Somerset, Eng.; on R. Yeo; 22 m. S.E. of Taunton; glove mnf., aeroplane wks. engin.; dairying; p. (1951) *23,337*.
Yerevan, *cap.*, Armenian S.S.R.; engin., chemicals, synthetic rubber, textiles, aluminium; p. (1959) *509,000*.
Yeshil-Irmak, *R.*, Turkey; flows N. to Black Sea; length 200 m.
Yeshil Kul, *L.*, Chinese Turkestan (Sinkiang).
Yeste, *t.*, Spain; mnfs.; p. *10,000*.
Yes Tor, *2nd highest summit*, Dartmoor, Devon, Eng.; alt. 2,028 ft.
Yevpatoriya (Eupatoria), *spt.* Ukrainian S.S.R.; chemicals, leather, locks, dried fish; p. (1959), *57,000*
Yezd, *t., prov. cap.*, Persia; caravan ctr.; p. (estd. 1949) *56,000*.
Yezo, *see* **Hokkaido.**
Yibna, *t.*, Israel; S.E. of Er Ramle; p. *5,000*.
Yiewsley and West Drayton, *urb. dist.*, Middx., Eng.; W. sub. of London; varied light inds.; p. (1951) *20 488*.
Yochow, *c.*, Hunan, China; at outlet of Tungting L. on the bank of the R. Yangtze; p. *4,800*.
Yokkaichi, *industl. c., spt.*, S. Honshu, Japan; on W. cst. of Ise Bay, 23 m. S.W. of Nagoya; mnfs. silk, cotton and woollen goods; exp. canned salmon, cheap pottery, textiles; imports raw wool and cotton; p. (1950) *123,870*.
Yokohama, *ch. spt.*, Honshu, Japan; on W. side of Tokyo Bay; silks, tea tr.; p. (1955) *1,143,287*.
Yokosuka, *spt.*, Honshu, Japan; S. of Tokyo; holiday resort; p. (1950) *250,533*
Yola, *t.*, N. Nigeria, Africa; nr. R. Benue; agr. tr.; p. *5,310*.
Yonkers, *c.*, N.Y., U.S.A.; on Hudson R.; carpets, sugar, hats; p. (1950) *153,798*.
Yonne, *dep.*, France; agr., wines, minerals; cap. Auxerre; a. 2,894 sq. m.; p. (1954) *266,410*.
York, *c., co. bor., co. t.*, Yorks, Eng.; on R. Ouse; in central position in Vale of York; cath., cas.; mkt., rly. wks., confectionery; p. (1951) *105,336*.
York, *I. gr.*, Torres Strait (between New Guinea and Australia).
York, *R.*, tidal estuary of Chesapeake Bay, U.S.A.
York, *c.*, Nebraska, U.S.A.; rly. ctr.; p. (1950) *6,178*.
York, *bor.*, Penns., U.S.A.; agr. tools, confectionery, tobacco; p. (1950) *59,953*.
York, *C.*, Hayes Peninsula, Greenland.
York, *C.*, Queensland, Australia; most N. point on mainland of Australia.
York Factory, *t.*, on Nelson R., Hudson Bay, Manitoba, Canada.
York, Vale of, *broad lowland*, Yorks, Eng.; extends N. to S. between Pennines to W. and N. Yorks Moors and Yorks Wolds to E.; drained to Humber by R. Ouse and tribs. from N. by Rs. Don and Trent from S.; flar apart from low transverse ridge Stamford Bridge to Harrogate; glacial and alluvial soils have required draining; crop farming, wheat, barley, root-crops, associated with fattening of beef cattle; settlement mainly marginal; ch. t. York; length 60 m.; width varies from 10 m. in N. to 30 m. in S.
Yorke, *peninsula*, S. Australia; separates Spencer G. and G. of St. Vincent; 100 m. long, 30 m. wide.
Yorkshire, *lgst. co.*, Eng.; divided into 3 Ridings, N., E. and W.; cap. York; a. 6,081 sq. m.; p. (1951) *4,516,362*.
Yorkshire, East Riding, *administrative co.*, Yorks, Eng.; chiefly farming, pastoral on Wolds, arable elsewhere; ch. t. Hull; a. 1,172 sq. m.; p. (1951) *510,800*.
Yorkshire, North Riding, *administrative co.*, Yorks, Eng.; chiefly farming, pastoral on Moors, mixed elsewhere; iron-ore mining in Cleveland Hills; heavy inds. around Middlesbrough; ch. t. Middlesbrough; a. 2,128 sq. m.; p. (1951) *525,496*.
Yorkshire, West Riding, *administrative co.*, Yorks, Eng.; pastoral farming on Pennines, but highly industl. on coalfield at foot of Pennines; woollens, steel, engin., etc.; ch. ts. Leeds (in N.), Sheffield (in S.); a. 2,780 sq. m.; p. (1951) *3,480,066*.
Yorkshire Moors, *hills*, N.R. Yorks, Eng.; inc. North Yorks Moors, Cleveland Hills and Hambleton Hills; bounded to N. by Tees Valley, S. by Vale of Pickering, W. by Swale Valley, E. by sea; composed of oolitic limestone; good sheep pastures; impt. iron-ore deposits worked in Cleveland Hills; maximum alt. 1,489 ft.
Yorkshire Wolds, *hills*, E.R., Yorks, Eng.; extend N.E. from Humber and terminate in Flamborough Head; composed of chalk; smooth slopes and short grass give gd. sheep pasture; average alt. 600 ft.
Yorkton, *t.*, Saskatchewan, Canada; agr. ctr.; p. (estd. 1957) *8,184*.
Yoruba, *dist.*, Nigeria; ch. ts., Oyo, Ibadan, Abeokuta and Ilorin.
Yosemite Falls, 3 cataracts, of Yosemite Creek, Cal., U.S.A.
Youghal, *spt., urb. dist.*, Cork, Ireland; on estuary of the Blackwater, Cork, Ireland; fisheries; p. (1951) *4,752*.
Young, *t.*, N.S.W., Australia; p. *4,010*.
Youngstown, *industl. t.*, Ohio, U.S.A.; on Beaver R., 60 m. N.W. of Pittsburgh; iron- and steel-mkg., heavy engin.; p. (1950) *168,330*.
Yozgat, *t.*, Turkey; p. (1945) *11,576*.
Ypacarai, *t.*, Central Paraguay; p. *8,214*.
Ypres (Ieper), *t.*, Belgium; linen, lace, mnfs.; 2 battles, First World War; p. *16,488*.
Ypsilanti, *c.*, Mich., U.S.A.; on Huron R.; agr. mkt., mnfs.; p. (1950) *18,302*.
Yssel (Zuider Zee), *L.*, Neth.; *see* **Ijsselmeer.**
Yssingeaux, *t.*, Haute-Loire, France; nr. Le Puy; mnfs.; p. (1954) *5,653*.

THE BRITISH COMMONWEALTH

The British Commonwealth of Nations comprises (a) the Sovereign States of the United Kingdom Canada, Australia, New Zealand, South Africa, India, Pakistan, Ceylon, Ghana, Malaya and Nigeria (including their dependent territories). (b) the Federation of Rhodesia and Nyasaland. (c) the Colonies, Protectorates, Protected States, Trust Territories, Condominiums and leased territories.

See also the chapter on the British Commonwealth in Section C which contains definitions of the status of the various countries of the Commonwealth.

I.—MEMBERS OF THE COMMONWEALTH, AND THE FEDERATION OF RHODESIA AND NYASALAND (including territories for which members other than the U.K. are responsible).

Country	Land Area (sq. miles)	Recent Population Estimates
United Kingdom	94,205	51,455,000
Canada (incl. Newfoundland and Labrador)	3,845,774	16,745,000
Australia (Commonwealth of)	2,974,581	9,533,334
Cocos Islands	5	652
Christmas Island	64	2,201
Norfolk Island—*Colony*	13⅓	942
Papua—*Colony*	90,540	464,709
New Guinea—*Trusteeship*	93,000	1,206,749
Nauru—*Trusteeship with Australia, New Zealand and the U.K.*	8¼	3,473
Antarctic territory	2,472,000	—
New Zealand	103,736	2,243,000
Island Territories	203	23,044
Ross Dependency	175,000 (estimated)	—
Western Samoa—*Trusteeship*	1,133	97,732
South Africa (Union of)	472,685	14,167,000
Prince Edward and Marion Islands	135	—
South-West Africa—*Mandate*	317,725	414,601
India (Republic of)	1,139,000	376,750,000 *
Sikkim	2,745	137,725
Pakistan (Republic of)	360,780	83,603,000
Ceylon	25,332	8,929,000
Ghana (incl. Togoland)	91,843	4,691,000
Malaya (Federation of)	50,690	6,277,000
Nigeria (Federation of)	339,169	32,932,010
Rhodesia and Nyasaland (Federation of)	487,640	7,450,000

* Excluding Jammu and Kashmir.

II.—TERRITORIES FOR WHICH THE U.K. IS RESPONSIBLE AND WHICH ARE ADMINISTERED THROUGH THE COLONIAL OFFICE.

(Some of the very small, or practically uninhabited, islands have been omitted.)

Region and Territory	Status	Land Area (sq. miles)	Recent Population Estimates
East Africa:			
Somaliland Protectorate	Protectorate	68,000	650,000
Kenya	Colony and Protectorate	224,960	6,261,000
Tanganyika	Trusteeship	362,688	8,832,000
Uganda	Protectorate	93,981	5,680,000
Zanzibar and Pemba	Protectorate	1,020	280,000
Central Africa:			
*Northern Rhodesia	Protectorate	288,130	2,180,000
*Nyasaland	Protectorate	49,177	2,648,000
West Africa:			
Gambia	Colony and Protectorate	4,003	274,800
†Northern Cameroons	Trusteeship	34,081	1,440,509
Sierra Leone	Colony and Protectorate	27,925	2,100,000

* Included in the Federation of Rhodesia and Nyasaland. Federal and Southern Rhodesian territorial matters dealt with through the Commonwealth Relations Office.

† Formerly administered as part of Nigeria under U.K. Trusteeship; future status to be decided by plebiscite.

Region and Territory	Status	Land Area (sq. miles)	Recent Population Estimates
Far East:			
Singapore	Internally self-governing state	224	1,262,000
Brunei	Protected State	2,226	65,900
North Borneo	Colony	29,387	383,000
Sarawak	Colony	47,500	626,000
Hong Kong	Colony	391	2,583,000
Mediterranean:			
Cyprus	Colony (proposed independence 1960)	3,572	536,000
Gibraltar	Colony	2¼	25,000
Malta and Gozo	Internally self-governing colony	122	319,000
British Caribbean:			
The West Indies Federation:			
Antigua (including dependencies)	Colony	171	53,000
Barbados	Colony	166	228,000
Dominica	Colony	305	63,800
Grenada	Colony	133	89,100
Jamaica	Internally self-governing colony	4,411	1,564,000
Cayman Islands	Colony	100	8,160
Turks and Caicos Islands	Colony	166	5,250
Montserrat	Colony	32	14,400
St. Christopher (St. Kitts) and Nevis, with Anguilla	Colony	153	54,800
St. Lucia	Colony	238	89,000
St. Vincent	Colony	150	77,700
Trinidad and Tobago	Colony	1,980	743,000
Other Caribbean Dependencies:			
British Guiana	Colony	83,000	499,000
British Honduras	Colony	8,867	82,000
Virgin Islands	Colony	67	7,680
Western Pacific:			
Fiji	Colony	7,040	346,000
Pitcairn	Colony	2	140
Tonga	Protected State	269	56,800
Western Pacific High Commission Territories:			
British Solomon Islands Protectorate	Protectorate	11,500	99,200
Gilbert and Ellice Islands Colony	Colony	369	39,000
New Hebrides	Anglo-French Condominium	5,700	52,900
Central and Southern Line Islands	—	—	Uninhabited
Atlantic Ocean:			
Falkland Islands	Colony	4,618	2,280
Dependencies: S. Georgia,	Dependencies of Falkland Islands	—	1,330
S. Sandwich Islands, S. Shetland Islands, Graham Land		—	Uninhabited
Bahamas	Colony	4,400	108,000
Bermuda	Colony	21	41,600
St. Helena	Colony	47	4,700
Ascension	Dependency of St. Helena	34	390
Tristan da Cunha	Dependency of St. Helena	38	280
Indian Ocean:			
Aden	Colony and Protectorates	112,080	800,000
Mauritius (including dependencies)	Colony	809	603,000
Seychelles	Colony	156	40,400

III.—TERRITORIES FOR WHICH THE U.K. IS RESPONSIBLE AND WHICH ARE DEALT WITH BY THE COMMONWEALTH RELATIONS OFFICE.

Country	Status	Land Area (sq. miles)	Recent Population Estimates
Basutoland	Colony	11,716	641,674
Bechuanaland	Protectorate	275,000	296,310
Swaziland	Protectorate	6,704	241,865
Maldive Islands	Protected State	115	90,000

General Information

Some 4,000 entries on subjects of general interest, alphabetically arranged

General Information

A

Aard-Vark, the name given by the Boers to a genus of ant-eating mammals peculiar to Africa; also known as antbears. They live in burrows, where they stay until after dark, when they attack the nests of termites; much esteemed as food by the natives.

Abacus, a device for making arithmetical calculations, consisting of bars with perforated beads. The earliest form of this instrument was used in Mesopotamia about 3000 B.C., and its use spread westwards throughout the Græco-Roman world and eastwards to China. An efficient form of the abacus is still used today in parts of Asia and Russia. As an architectural term, an abacus is the uppermost portion of the capital of a column, supporting the architrave.

Abattis, a military term signifying an entrenchment of trees placed side by side, with the branches outwards.

Abbeys, monastic or conventual establishments governed by an abbot or an abbess were among the earliest Christian institutions. Monasticism owes its extension in the west to the Benedictines who founded many abbeys in the 6th and 7th centuries; by 1415 no fewer than 15,070 had been established by this order alone. The buildings of a Benedictine abbey (and later of the Cistercian abbeys) were usually built according to one plan. Remains of Benedictine abbeys may still be seen at York and Westminster. Fountains Abbey is the largest and best preserved Cistercian house in England. From the dissolution of the monasteries by Henry VIII. monasticism practically ceased in this country. There are a few modern monasteries.

Abdication. The term usually refers to the act of a sovereign who relinquishes the supreme power in a State. There have been only two instances since the Conquest of the abdication of an English monarch; that of James II., in 1688, and that of Edward VIII. in 1936. Defeat in the first and second world wars caused the abdication of many Continental rulers.

Abecedarians, a small sect of Anabaptists of the 16th century, opposed to learning of every kind.

Aberdeen University, founded in 1494 and now constituted by the Union of King's College (1505) and Marischal College (1593) in 1860.

Aberration, in astronomy, is the apparent displacement of a star due to the motion of the observer with the earth. In optics (i) spherical aberration, causing blurring of an image, is due to failure of lens to bring light to a single focus, (ii) chromatic aberration, causing coloured fringes to an image, is due to the refractive index of glass being different for light of different colours. For instance, violet light is bent more than red.

Abiogenesis, or spontaneous generation; the origination of living from non-living matter. The term is applied to such discredited ideas as that frogs could be generated spontaneously by the action of sunlight on mud, or maggots arise spontaneously in dead meat without any eggs from which the maggots hatch being present. Spallanzani (1729–99) upset the hypothesis of spontaneous generation; Pasteur dealt it a death-blow. *See* **F21** (1).

Aborigines, a term first applied to an ancient mythical people of central Italy, derives from the Latin *ab origine* = from the beginning. It now signifies the original inhabitants of any country, in particular the aboriginal tribes of Australia. In contrast to their highly complex social and religious customs, the material culture of Australian aborigines is very low and ill adapted to stand up to contact with European civilisation. Originally estimated at 300,000, their number has dropped in the last 200 years to some 50,000, concentrated on reservations in the northern part of the continent.

Absinthe, an aromatic spirit formerly much consumed in France, and made from a distillation of wormwood and other roots macarated in alcohol. The manufacture is prohibited in France and Switzerland. Zola's novel *L'Assommoir* was a scathing indictment of the absinthe habit.

Absolution, an ecclesiastical term denoting the liberation of a person guilty of sin from its consequences by the act or intercession of religious authority. Now confined in its strict form chiefly to the Roman Catholic and Greek Churches, although used to some extent in the Anglican communion.

Academy is a Greek term originally applied to the groves where Plato taught, but subsequently adopted to indicate higher educational institutions of a special kind. Academies of Science are numerous in all parts of the world, and in addition there are what may be called Literary Academies, of which the French Academy, established in 1635, is a notable example. There are also Academies of History, of Medicine, of Music, and of Art. The London Royal Academy of Arts was founded in 1768, Sir Joshua Reynolds being its first President. The British Academy, for the promotion of historical, philosophical, and philological studies, was founded in 1902, and is incorporated by Royal Charter.

Acetic Acid, an organic acid produced when ordinary (ethyl) alcohol is fermented by the organism called *Acetobacter aceti*. The same oxidation process yields vinegar; this is a weak and crude solution of acetic acid obtained by trickling dilute alcoholic liquor over beechwood shavings at 35° C. The souring of wine is due to the same process. Acetic acid is used as a food preservative and flavouring material, and in the manufacture of cellulose acetate and white lead.

Acetylene, a powerful illuminating gas (compounded of hydrogen and carbon), readily soluble in acetone, will inflame spontaneously when brought in contact with chlorine. Used as an illuminant in bicycle lamps, also to a small extent for house lighting. The flame it gives when burnt with oxygen in the oxy-acetylene blow-lamp is very hot and is used for welding.

Acids are compound substances which combine chemically with an alkali or base and result in a new body that has neither acid nor alkaline properties. These resultant bodies are termed salts. All acids contain hydrogen which is replaceable by metals, salts being formed as the hydrogen is liberated. The range of acids is very great. The chief mineral acids are sulphuric, hydrochloric, and nitric, and are capable of being utilised for an immense variety of commercial purposes.

Acolyte, one who assists the priest at Mass by saying the responses and by waiting on him.

Acrostic, a kind of verse which has afforded amusement to ingenious triflers from very ancient times, and consists of a composition so arranged that the initial letters of the lines, read consecutively, form certain names or words.

Acts of Parliament. *See* **C7, D5** (2).

"**Addled Parliament.**" James I.'s second Parliament, called together in 1614, and dissolved without legislating, on its refusal to grant supplies.

Advent, a period devoted to religious preparation for the coming celebration of the Nativity (Christmas). It comprises four Sundays, and commences on the one preceding or following St. Andrew's Day (Nov. 30), or on St. Andrew's Day itself. Advent was not observed before the 4th century.

Advocatus Diaboli ("the devil's advocate"), a Roman Catholic functionary who presents opposing evidence in regard to the life of any deceased person it may be proposed to canonise.

Advowson is the right of presentation to a vacant church benefice, and the person exercising the right is called the patron. Advowsons originated from the right of feudal lords who had

built or endowed churches to nominate the incumbent, and this right came to be regarded as a right of real property. The buying and selling of advowsons has been greatly restricted since the passing of the Benefices Act, 1898 (Amendment) Measure, 1923.

Adytum, the innermost sanctuary or secret chamber of ancient temples, access to which was forbidden to all but the priests. The most famous is the temple of Apollo at Delphi.

Aeolian Harp, a musical instrument once very popular. It consists of catgut stretched over a wooden sound-box which, when placed out of doors in the wind, can be made to emit many pleasing harmonies.

Aerenchyma. Plant tissue which is spongy because there are large air spaces between the cells in which gases can circulate. This aerating tissue is characteristic of marsh and water-plants.

Aerodynamics, the science of gases (especially air) in motion, particularly in relation to aircraft (aeronautics). The idea of imitating the birds by the use of wings is of ancient origin. It was Leonardo da Vinci, however, who first carried out experiments in a scientific manner. The invention of the balloon in 1783 and the researches of scientists and engineers in the 19th century ultimately led to the development of the aeroplane.

Aerolites, the name given to the class of meteorites composed chiefly of heavy silicates. The other two main classes are *siderolites* (nickel–iron and silicates) and *siderites* (nickel–iron).

Affirmation is a declaration made in lieu of an oath by persons objecting to be sworn because of religious or other scruples. Perjury applies to affirmations the same as to oaths.

Afrikander, type of cattle bred in South Africa.

Afrikaner, an Afrikaans-speaking South African, usually of Dutch descent.

After-damp is a mixture of carbon dioxide and nitrogen that occurs in a mine after an explosion and causes suffocation to human beings. It is also called "choke damp" and "black damp."

Agape, a "love-feast" held by the early Christians in commemoration of the Lord's Supper.

Agar-agar, a vegetable jelly obtained from seaweeds, and largely employed in the Orient in the composition of soups and jellies. Used by bacteriologists to render solid culture media such as broth and blood upon which bacteria are cultivated. Before the second world war Japan had a virtual monopoly in agar-agar; U.S.A. and British Commonwealth now make it in quantity.

Agaric, large fungi of the family *Agaricaceae*, which includes the mushroom and what are popularly called "toadstools," though the idea that these two lay terms sharply differentiate between edible and poisonous fungi is an incorrect one. Characteristic of the agarics is the presence of a cap or *pileus* (bearing underneath the spore-shedding gills) and a stalk or *stipe*.

Agate, a variegated stone composed of nearly pure silica (silicon dioxide). Parallel bands of colour are often characteristic. Germany, Brazil, and India furnish the main supplies, and Scotland has a species of agate called Scotch pebble.

Agave, the American aloe or Century Plant which sometimes does not attain to flowering maturity under sixty or seventy years, and then dies. The flower spray may reach a height of 20 feet and in its development the rush of sap is so great that the Mexicans collect for brewing the strong spirit called mescal. 1,000 litres of sap can be obtained from a single plant. One species of agave yields sisal used for making cord and rope.

Agnostic, a word used by T. H. Huxley in 1869 to describe a person who says he does not know whether or not there is a Supreme Power behind the universe. He neither affirms nor denies the existence of God but suspends judgment. The rise of agnosticism was a characteristic of the 19th century.

Agnus Dei (Lamb of God), a short anthem said or sung at a certain point of the Roman Catholic Mass or Anglican communion service. (John i. 29.)

Air is a mixture of gases forming the atmosphere we breathe. Nitrogen, oxygen, and argon are always present in air; a typical sample of dry air might contain these gases in the following proportions (by volume): nitrogen, 78·06%; oxygen, 21%; argon, 0·94%. A small quantity of carbon dioxide is present, about 3 parts in 10,000 parts of air. This carbon dioxide is the source of carbon compounds built up by green plants in photosynthesis; in the process carbon dioxide is absorbed from the air and oxygen returned, the reverse of the respiratory process of animals. Air also contains a quantity of water vapour, and traces of ammonia, nitrogen oxides, hydrogen, sulphur dioxide, hydrogen sulphide, ozone, and of the rare gases helium, krypton, neon, and xenon. In a city smoke and dust particles may be as abundant as 100,000 particles per cubic centimetre. A litre of air at 0° centigrade and 700 millimetres pressure weighs 1·2932 grams.

Alabama Claims were claims for compensation made by the United States against Great Britain for damage done to American shipping during the Civil War by the *Alabama* privateer, which was finally sunk by the *Kearsage*, of the U.S. Navy. The claim was decided by arbitration at Geneva in 1872, the Court giving a verdict for the claimants for over £3,160,000.

Alabaster, a soft crystalline form of sulphate of lime, or granulated gypsum, easily worked for statuary and other ornamental articles, and capable of being highly polished. Volterra, in Tuscany, yields the finest; that in highest ancient repute came from Alabastron in Egypt, near to the modern Antinoë.

Alb, white vestment reaching to the feet, worn by priests.

Albatross, a large sea-bird of almost pure white, black and white, or brown plumage. It nests in colonies on remote islands, but at other times rarely approaches land. Of the thirteen species, nine are found in the southern oceans, one in the tropics, and the three others in the North Pacific.

Albert Memorial, a large Gothic monument designed by Sir Giles Gilbert Scott, and embellished with sculptures by eminent artists. Erected in memory of Prince Albert in Kensington Gardens at a cost of £120,000.

Albigenses, the name given to an heretical religious sect who were active in the South of France in the 12th and 13th centuries. They protested against attempts at suppresson by the Roman Church, acting principally through the inquisition. The heresy was finally crushed, and during the struggle the brilliant Provencal civilisation was destroyed.

Albino, a term first applied to designate certain negroes mottled with white spots whom the Portuguese navigators met with in Africa. It is now used in regard to all persons of white skin and hair and pink eyes. Albinos cannot see well in the sunlight; it is only in semi-darkness that they discern objects clearly. The albino peculiarity is also found in other living creatures besides man.

Albumen, white of egg. It coagulates under heat, or by the action of acid or alcohol, and is further capable of soluble or insoluble modifications. It provides an anti-toxin in corrosive sublimate poisoning.

Alcalde, a Spanish mayor, judge or magistrate, or in Portugal a justice of the peace; not to be confounded with the similar word "alcaide," which signifies the keeper of a castle or prison along both shores of the Mediterranean. The latter is a military term, the former signifies always a civil functionary, but both are from the same Arabic root.

Alcázar, the famous palace at Seville, in ancient days the residence of the Moorish kings. *See* **G32** (1).

Alchemy was from the 12th to the 17th centuries regarded by many philosophers and enthusiasts as a science capable of demonstration in the production of one or other of three supposed chemical combinations—the philosopher's stone, which was to transmute the baser metals into gold; the elixir of life, that was to prolong existence indefinitely; and the alkahest, or universal solvent. Men of great attainments, monarchs, ecclesiastics, and all classes of people dabbled in alchemy; lives were given up entirely to it, fortunes were wasted upon it. Geber, Roger Bacon, Albertus Magnus, Paracelsus, and many other men of note were devoted alchemists. The experiments of the al-

chemists, however, in spite of their being directed towards an impossible end, resulted in many discoveries that were of value to the real science of chemistry.

Alcohols are chemical compounds, containing carbon, hydrogen, and oxygen. Unless otherwise specified "alcohol" in the singular means "ethyl alcohol" (ethanol); this is produced by distilling fermented liquors. Industrially ethyl alcohol is used in the manufacture of chloroform, ether, perfumes, etc. Diluted with wood alcohol or other denaturants ethyl alcohol becomes "methylated spirits": the denaturants are varied according to the industrial purposes for which it is required, the methylated spirits then being largely exempt from duty. Wood alcohol (methyl alcohol or methanol) can be obtained by distilling wood, or synthetically from water gas.

Alcoholic Strength. In Great Britain the standard is the proof gallon which is an imperial gallon of spirits containing 49·28 per cent. of alcohol by weight or 57·1 per cent. by volume at 60° F. In Europe the strength of spirits is usually measured by the Guy-Lussac hydrometer. In the U.S.A., because of the smaller gallon, 1·37 U.S. proof gallons = 1 British proof gallon. In Britain the alcoholic content of spirits and liqueurs appears on the bottle in degrees proof. Whisky, for example, at 70° proof (or 30° under proof) contains $70/100 \times 57{\cdot}1$ alcohol, or about 40 per cent. The alcoholic content of wines is not shown on the label.

Aldehyde, the generic term for a class of chemical bodies. Except for formaldehyde, which is a gas, aldehydes are volatile liquids. They are produced by oxidation of primary alcohols. Most important aldehyde is formaldehyde used in making the plastics described as formaldehyde resins. Formalin (formaldehyde solution in water) is much used for preserving zoological specimens.

Alder, a river-side, broad-leaved tree of the genus *Alnus*, including some 30 species and found in north temperate regions and the Andes. The only species native to Britain is *A. glutinosa*, which has been described as "guardian of river-banks" because of the way its roots bind together the sand and stones, and so slow down erosion.

Alderman (Anglo-Saxon *Ealdorman*), a title given by the Saxons to persons of high and hereditary distinction, such as princes, earls, and governors. Afterwards adopted to designate the members of municipal corporations, next in dignity to the Mayor.

Aldine Editions are the beautiful books printed in Venice by the Renaissance printer Aldo Pio Manuzio and his family between 1490 and 1597. Italics were first introduced in these books.

Alexandrine, a twelve-syllable metre, the leading measure in French poetry, derived from the romantic tales collected in the 12th century around the name of Alexander the Great. *See* **M5** (2).

Algae, flowerless plants living mostly in water. Seaweeds and the green pond scums are the best known algae. The green powder found on trees is composed of a microscopic alga (*Protococcus*).

Algebra, a branch of mathematics in which symbols are used in place of numbers. Sir Isaac Newton styled it the "universal arithmetic." The Chinese were able to solve the quadratic equation before the Christian era but it was Al-Khowarizmi, an Arab mathematician of the early 9th century, who introduced algebra to Europe.

Alhambra, the ancient palace of the Moorish kings at Granada in Spain, built in the 13th and 14th centuries. Though part of the castle was turned into a modern palace under Charles V., the most beautiful parts of the interior are still preserved—the graceful halls and dwelling-rooms grouped round the Court of Alberca and the Court of Lions, with their fountains, arcades, and lovely gardens. *See* **G32** (1).

Alibi, signifying "elsewhere", is the plea of a person who desires to prove presence elsewhere at the time the alleged act took place.

Alimony. *See* **D30**.

Alkali, the general name given to a number of substances, including soda, potash, and ammonia, which in some ways are the opposite to acids in their chemical action. They are used commercially in the manufacture of paper, glass, soap, and artificial silk. The word comes from the Arabic *al-kali* meaning calcined wood ashes. Alkalis are extremely soluble in water and neutralise acids to form salts and water.

Allegiance is the tie which binds the subject to his sovereign for the protection that the sovereign affords to the subject.

Allegory, a narrative or discourse couched in figurative language and intended to point a moral. A leading example is Bunyan's *Pilgrim's Progress*.

Alligator, the crocodile of America, common in the lower Mississippi and adjacent lakes and marshes, varying in length from two to twenty feet.

Alloys are combinations of metals. Silver coins contained pre-war about 7 per cent. of copper. The alloys best known are brass, composed of copper and zinc; German silver, of copper, zinc, and nickel; pewter, of tin and lead; bell-metal, of copper and tin. When mercury forms part of an alloy, it is termed an amalgam.

All Saints' Day (Nov. 1), is common to both the English and Roman Catholic Churches, and is in commemoration of the saints generally, or such as have no special day set apart for them. Instituted by Pope Boniface IV, early in the 7th century, this ecclesiastical festival was formerly called "All Hallows."

All Souls' Day (Nov. 2) is a festival of the Roman Church, intended for the mitigation by prayer of the sufferings of souls in purgatory. The commemoration was enjoined by Abbot Odilo of Cluny during the 11th century upon the monastic order over which he presided, and was afterwards adopted generally throughout the Roman Communion.

Allspice, a flavouring obtained from a West Indian tree of the myrtle order, *Pimenta officinalis*. The essential oil of its unripe fruit is a powerful irritant, and the bruised berries are carminative.

All the Talents Administration was a coalition of the best men of the two political parties, formed on the death of Pitt, in the year 1806 by Lord Grenville. It abolished the slave trade.

Alluvium, accumulations of sand, mud, gravel, etc., washed down by rivers and forming distinct deposits.

Almanac, a calendar of the year, with particulars of days, weeks, and months, the position of the sun and moon, tidal information, records of festivals, etc. The earliest mention of a calendar is in 1150. The earliest almanac printed in England was *The Kalendar of Shephardes*, printed by Rice and Pynson about 1497. *Old Moore's Almanac*, a popular penny issue, had a huge circulation for many years. *Whitaker's Almanac* was first published in 1868.

Almond, the fruit of the *Amygdalus communis*, originally indigenous to Persia, Asia Minor, and N. Africa; now cultivated in Italy, Spain, and France. It yields both bitter and sweet oil. Bitter almond oil is obtained by macerating and distilling the ripe seeds; it is used for flavouring and scenting purposes, its fragrant odour being due to the presence of benzaldehyde. When the seeds are pressed, sweet almond oil results: this is used in perfumery, and also as a lubricant for very delicate machinery.

Almoner was a monastery official charged with the distribution of alms. There was also the King's Almoner and the title of Hereditary Grand Almoner still survives, though the office is now a sinecure. The Lord High Almoner is usually a bishop who, in the absence of the sovereign, distributes the royal bounty once a year on Maundy Thursday. Since 1895 the name almoner has been given to the skilled medical social workers on the staffs of hospitals.

Almuce, a fur stole worn by certain canons.

Aloe, large plants of the lily family. There are about eighty-five species, most of them in Cape Colony, especially in the Karroo desert. The bitter purgative drug (aloes) is prepared by evaporating the plants' sap. (*See* **Agave.**)

Alpaca, a South American ruminant allied to the llama whose long, fine wool is woven into a soft dress fabric known by the same name. Sir Titus Salt first manufactured alpaca cloth (1836). Saltaire, near Bradford, remains to evidence the success which for many years attended the enterprise.

Alpha Particle, helium nucleus, composed of 2 neutrons and 2 protons: identified and used by Rutherford as a projectile to bombard other atoms. *See* **F11** (**1**), **62** (1).

Alphabet (so called from the first two letters of the Greek alphabet—alpha, beta) is the term applied to the collection of letters from which the words of a language are made up. It grew out of the knowledge that all words can be expressed by a limited number of sounds arranged in various combinations. The Phœnicians were the first to make use of an alphabetic script derived from an earlier Semitic alphabet (earliest known inscriptions *c.* 1500–950 B.C.) from which all other alphabets have sprung. The stages in the development of the alphabet were mnemonic (memory aids), pictorial (actual pictures), ideographic (symbols), and lastly phonetic. All the ideographic systems died out, with the exception of that of the Chinese.

Alsatia, a district of Whitefriars, London, which was for a long period a recognised sanctuary for debtors and criminals, where they could not be captured. It was abolished in 1697.

Altar, originally a table or elevated place upon which sacrifices were offered up, and in the Christian Church applied to the table on which the eucharist is celebrated. In some Protestant denominations the communion table takes the place of the altar.

Altimeter, an instrument used in aircraft to estimate altitude; its essential feature is an aneroid barometer which registers the decrease of pressure with height. Roughly 1 millibar corresponds to 30 ft. To read an aircraft altimeter correct for its destination, the zero setting must be adjusted for difference of ground height and difference of surface pressure, especially when pressure is falling or when flying towards low pressure.

Altitude, an astronomical term used to signify the angular elevation of a heavenly body; this is measured with a quadrant or sextant. In aeronautics it is the height (in feet or metres) above sea-level.
